452.0125 repeater-antenna on building, only 20' high so very limited range
451.3375 simplex
451.5625 simplex
451.6375 simplex
452.0375 simplex
452.2875 simplex
http://www.schlitterbahn.com/gal/
Not sure when they are going to open, possibly this summer. They've had lots of setbacks to the building process.

They are selling season passes now.

Check out this license WQEF495 for Bearcom rentals that runs from 2/1/06 to 2/23/06
These are the freqs Eric touched on last month that are for the NBA All Star Game on Feb.19.
Repeaters are 10 watts, licensed for 700 4-watt portables. Appears to be licensed for 19 repeaters.

Subject: [HoustonScan] New STAR-Net sites, and other stuff

Just poking around on the FCC database site and noticed freqs for three more

STAR-Net sites.
WQDW910 licensed Nov.2005:

"Freeport"-300' tower near 332 and 288 south of Clute. Antenna at 180' level.
Centerpoint Energy has antennas at the higher spots on tower
866.5375
866.900
866.9875
867.125
868.500
868.550
868.8125

"Galveston"-285' tower near 25th and Church. Antenna at 235' level.
Centerpoint Energy has antennas near top.
866.800
866.875
868.3125
868.600-note: was licensed at Alvin site but hadn't heard used in a long time80

"Texas City"-tower ID is 1001973 near 197 and 146. Getting two different coordinates as to where this tower is (about 450' apart) and how high it is.

Is same tower that Galveston County trunk is running on in Texas City.
Galveston County says the tower is 690 feet and antenna is at 535' level.
Harris County says tower is 550 feet high and antenna is at same height as Galveston County(535').
866.125
866.3375
866.625-confirmed used
868.300
(also using 866.5875 and 867.550, licensed to Galveston County)

Also, here are some freqs licensed in November to Schlitterbahn Galveston
Island Waterpark WQDV411
452.0125 repeater-antenna on building, only 20' high so very limited range
451.3375 simplex

# 10874. RE: [HoustonScan] New STAR-Net sites, and other stuff

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-05 18:16:56 UTC
From: Michael W. Jones
Topic: 10872  Message: 10874

Actually, it does make sense the addition of the Freeport location. From the data I collected and sent to Uniden for the upcoming BCT996D's preloaded data, the Gulf Coast of Brazoria county had some coverage gaps (based on computer models). The other two locations already exist, and this may signal the beginning of Galveston's Motorola system being assimilated.

If you're interested in my computer model, it is on an Acrobat file:

www.otsc.com/~mjones/StarNET%20Coverage%20By%20Tower.pdf

# 10875. Galveston County trunk

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-05 18:18:35 UTC
From: Myles Barkman
Topic: 52  Message: 10875

I don't typically listen to the Galveston County trunk.
Can anyone tell me if they still use DVP on it as well as private calls?
It appears they are only running on 10 freqs now:
866.9625
867.0875
867.3125
867.3375
867.5625
867.7125
868.5875
868.6625
868.800
868.9125

866.0625-was possibly used for STAR-Net testing at one point, don't hear any activity now

These were used by private calls before:
866.4375-was used as control channel when testing new STAR-Net Texas City 2 years ago
866.5875-being used for new STAR-Net site 18 in Texas City (control channel)
866.8125
866.8375

These were used for DVP before:
867.8375
868.0625-was used as control channel when testing new STAR-Net Galveston
868.2125-was possibly used as control channel when testing new STAR-Net Galveston
868.3375
868.4625

These were simplex talkaround channels:
866.1625-was used as voice channel when testing new STAR-Net Texas City site 2 years ago
866.4125-was used as voice channel when testing new STAR-Net Texas City site 2 years ago

Can anyone hear the STAR-Net Galveston site 19 using 866.4375 or 868.2125

From: marvin suggs
Topic: 10862  Message: 10879

Some fire departments still refer to an alarm as a "box". I think Cy Fair and Montgomery County still do this. A 'box' is an intersection of two streets, where a fire alarm 'box' would be located on the corner. Houston FD did that up until a few years ago. Every intersection in the city was given a 'box' number, which listed the units that would respond to that fire alarm location. Each box had a run card for a first alarm, second alarm, etc up until a 5 alarm asssignment, back before computers.

# 10880. Washington County P25

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-06 22:41:35 UTC
From: navscanmaster
Topic: 10880  Message: 10880

Heard P25 communications and radio technicians on 155.625 and I think I might have caught it on 155.835, but I was busy at the time I thought I saw it. Very limited testing, 5 counts, and radio techs talking to dispatch. This would make Grimes, Robertson, and Washington counties using P25 in VHF conventional mode.

# 10881. Re: [HoustonScan] Washington County P25

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-06 23:03:50 UTC
From: navscanmaster@aol.com
Topic: 10880  Message: 10881

in addition, just now heard them wrapping up, but one tech said "give me some calls on the way out to do some range testing on the digital" at 5:01 PM. So if you want to catch it now's a good time to catch it.

# 10882. decoding fire tones

From: Myles Barkman
Topic: 10882  Message: 10882

Here's some handy info for folks that may still be having problems figuring out the two-tone fire tones for their department's apparatus/stations.
http://www.wpascanner.com/396tone.htm

Includes links to programs that can record scanner audio automatically during the day and links to software to decode the tone information.
Hope this helps some folks.

# 10883. STAR-Net Texas City logs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-07 00:07:41 UTC
From: Myles Barkman
Topic: 10883  Message: 10883

Here's the talkgroups I've seen logged on the Texas City STAR-Net site since it's run all night and day.
8752 Harris County Commissioners Precinct 2 (often seen used on sites being tested)
20752 Seabrook PD Primary
20784 Seabrook PD Secondary
26192 Brazoria County DPS Channel 1
46976 unknown user

All were logged as recently as the last couple of hours (3:45pm-6pm)

The primary freqs used for this site are:
866.5875 Control
866.625 voice
867.550 voice

I have also logged
859.2875 old Aviation Department EDACS trunk channel
860.0125 Nextel
862.3125 Nextel-logged multiple times
Since I don't have a picture perfect signal on the control channel and adjacent signals tend to interfere with it, it could account for bogus frequencies or talkgroups.
Perhaps someone else could verify some of this info. Best time would be during peak times between 3 and 5pm.

From: navscanmaster@aol.com
Topic: 10880  Message: 10885

oh, and Grimes SO/Navasota PD use what I guess you could call mixed mode. CH 1 is the 154.800 repeater in analog, PL 141.3. CH 2 is the 154.800 repeater in P25 mode. Not all radios are digital capable yet. Dispatch hears units transmitting in P25, but answers in analog. Wierd, huh? I would say that 97.5 % of transmissions are analog. Only a couple of deputies and patrolmen will use CH 2. Right now the big thing is spending the $400 K grant to build out a countywide mobile data system.

# 10886. Re: [HoustonScan] Washington County P25

Yahoo group: HoustonScan (2005 — 2006)

From: navscanmaster@aol.com
Topic: 10880  Message: 10886

Update - testing pretty much stopped at 6:15 PM. One guy was testing in analog and digital from Burton, and the central tower site tech was telling him how he was voting from Burton on the Brenham site, then the Burton site. He also mentioned that the sites were LCRA Burton and Brenham, and I don't see a license for LCRA in Burton. But nonetheless, lots of clear P25 audio conversations were heard from my location here in Navasota. Nothing was heard on 155.835 after all.

Fire at warehouse in La Porte's Akzo Nobel plant.
Aluminum oxide/aluminum powder exploded. One worker with burns.
Continue to have explosions in warehouse.
Traffic on 225 east and westbound shut down at Battleground and Miller
Cut-Off.
Ops on 154.130 and 155.625 MHz.
Also Deer Park PD 30096 for traffic control.

Yes that was the main channel. There was traffic on
other Starnet Pasadena TG as well. With new sites and
TG being added it gets interesting trying to keep
track of it all.

Just type in the freqs listed after each site name.
http://www.radioreference.com/modules.php?name=TRSDB&sid=38
or here
http://home.houston.rr.com/freqzone/freqs/star-net.html

Per the RadioReference site,
http://www.radioreference.com/modules.php?name=TRSDB&sid=1434
San Antonio PD as well as other public safety agencies are using ProVoice
digital which cannot be monitored on any current scanners.

# 10900. STAR-Net findings

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-12 08:11:53 UTC
From: Myles Barkman
Topic: 10900  Message: 10900

Just an interesting note that a couple of the sites that were reportedly using connect tone 105.88 Hz are now using the more popular 83.72 Hz. Pearland and Angleton were using 105.88 Hz before. Don't know why they were different from the rest.
Now most of the sites are using 83.72 Hz. Perhaps all are using but I can't hear all of them to confirm.
I can't hear Humble and it was using 105.88.

Each site transmits on their control channel up to seven sites' control channels around that site.
For instance, the Pearland site is transmitting control channel info for Richmond, Angleton, Alvin, Pasadena, Houston and Missouri City. That's only six sites but they CAN do 7.
Alvin is putting out 7, one of which is the Texas City site and another is the Galveston County site.

Freeport is way too far away for me to hear but I'll go out on a limb and say it's not on the air yet. I would think that it's control channel info would have been put out on Angleton's site but it's not (yet). Instead, it has info on Missouri City and even Richmond.

What's really interesting is that - according to people I've spoken with at Sprint - when Nextel's iDEN contracts expire, Sprint will switch from the iDEN networks, to their own system (primarily VOIP). In other words, in as little as ten years, this could be pointless, anyway.

There are, of course, no guarentees on this, but if it does happen this way... Well, hell, why not spend the money - I guess. Changing things is always so much better than complying with the law.

From: KC5RBA@AOL.COM
Topic: 10899  Message: 10907

that has been a confirmed rumor

the iden network will most likely be switched to cdma to be a secondary band
for pcs 1900 band once the cdma network has the new voip d/c

In a message dated 2/12/2006 10:53:12 A.M. Central Standard Time,
mjones@... writes:

I had also heard that The feds are insuring that rebanding is completed,
since they plan on buying the iDEN network from Sprint/Nextel/Motorola, and
operating it as a nationwide Government communications net.

Subject: Re: [HoustonScan] 800 MHz rebanding snafu

What's really interesting is that - according to people I've spoken with
at Sprint - when Nextel's iDEN contracts expire, Sprint will switch from
the iDEN networks, to their own system (primarily VOIP). In other
words, in as little as ten years, this could be pointless, anyway.

There are, of course, no guarentees on this, but if it does happen this
way... Well, hell, why not spend the money - I guess. Changing things
is always so much better than complying with the law.

# 10908. Car chase US290 from Waller County east on 290

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-13 23:43:36 UTC
From: James Sitton
Topic: 10908  Message: 10908

Car chase sound it a little wild running 80 miles an hour. I think they said he had no rubber left. last I heard headed east past Mason Rd in to Houston.

TG 23152 and 155.760 VHF

# 10909. Re: [HoustonScan] 800 MHz rebanding snafu

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-13 23:57:09 UTC
From: Myles Barkman
Topic: 10899  Message: 10909

The entire rebanding process is proposed to be completed by the middle of 2008.
The process is being done in waves where geographic sections of the country are to start and end at intervals between now and the middle of 2008.
Houston's area, NPSPAC region 51, is in wave 2, and is to begin reconfiguration of channels 1-120 between now and the 3rd quarter of 2006.
This includes the 851-854 MHz band.
The NPSPAC band (866-869 MHz) reconfiguration is to begin around the 3rd quarter of 2006 and should be completed by the end of first quarter 2008.

You can go to this link and enter the callsign of an 800 MHz user and see what if any action will occur to all frequencies under that license.
http://www.800ta.org/content/800Mhz/call_sign.asp
Let's use STAR-Net since this will be the biggest move and largest impact of this action.
They have many different callsigns but we will just stick to one for an example.
WPKL474

When you enter that callsign, you get a rather long list of frequencies, locations of repeater sites, and what action will occur with that particular frequency after rebanding.
All of WPKL474 frequencies are between 866 and 869 MHz. The entire band will basically shift down 15 MHz to occupy the band from 851 to 854 MHz.

Now if you enter WNBZ674, you get some frequencies between 854 and 861 MHz.
That band is not required to relocate their frequencies, however, the 860-861 MHz band will become what is called an "expansion band" to be used primarily by business and SMR licensees.
Licensees presently in that band will generally be relocated unless they choose not to.
So it appears to be up to the STAR-Net admins if they will move their 860-861 MHz frequencies. STAR-Net presently has 6 frequencies in that band at various sites.
Since the whole purpose of this project is to separate the 2-way public safety users from the Nextel users to eliminate interference, it would be in STAR-Net's best interest to relocate their frequencies as far away from 862 MHz, where the start of the ESMR band will be (Nextel and users). The deadline for Wave 2 users to notify that they elect to remain in the expansion band has passed (January 3, 2006) so they must have made up their minds by now.

It is interesting to note that region 18 which is Louisiana has been moved from Wave 2 to Wave 3 due to Hurricane Katrina. That just changes their schedule by about 4 months later.

As for your question about a comparable scanner to your soon-to-be paperweight scanner, you might check into the Pro-92 scanner.
But who knows what scanners will come out between now and then. Keep your options open. You might want to consider purchasing a scanner that can decode P25 digital modulation.
In a few years, many agencies may be switching to that mode and STAR-Net is currently capable of using that mode now. Who knows when they will actually start using it.

> this action.

Let me correct this by telling you what I was thinking instead of what I was typing.
This will be the biggest move in terms of frequencies and users in this region and the largest impact in terms of scanner listeners (again, in this region) due to this action.

# 10911. South Houston VFD

Yahoo group: HoustonScan (2005 — 2006)

Topic: 10911  Message: 10911

Looks like South Houston VFD is finally going to make the move to STAR-Net.
Sorry, that's all I got right now.
Will let you know something else when I know.

That's kind of a loaded question. There are several differences between them and you can compare them on this site I found: http://myweb.accessus.net/~090/bearcatting.html

Most notably, the Pros on the 97 are that it has 1000 channels, has the MIL Air band, and does LTR trunking.
The Pros on the 96 is that it can decode P25.
I'd rather have a scanner with the best of both worlds like my Bearcat BC-296D.
Actually, I'd rather have the 396D now, with the Close-call feature and virtual memories.

Guess the answer you seek really depends on what your needs are and how much money you can part with.

# 10916. old Lifeflight TG

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-15 10:32:59 UTC
From: Myles Barkman
Topic: 10916  Message: 10916

Does anyone still listen for the old Lifeflight talkgroup of 208 on
STAR-Net.
I still see usage on it on my T4Win logs occasionally.
I've been monitoring the Pasadena system the last couple of days and 208
popped up as recently as Tuesday afternoon at 5:21 pm. It could be bad data
but it makes me curious.
Maybe someone can park there on it for a few days with a vox recorder and
see what's shaking.

# 10917. new STAR-Net talkgroups

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-15 10:39:36 UTC
From: Myles Barkman
Topic: 10917  Message: 10917

Noticed something else in logs, a group of talkgroups that were keyed up in sequence Tuesday morning.
58064
58096
58128
58160
These were all keyed up in this order about 15 seconds apart.
Someone was testing some radios that were just programmed.
The 58064 talkgroup was most recently used on Tuesday night around 10:23 pm so perhaps it is the "main" talkgroup of the set.
The quest continues (right Ben?)...

League City PD, maybe?
They are next door to Pasadena, and Pasadena used LC towers as backup.
Perhaps the assimilation is beginning.

From: Myles Barkman
Topic: 10923  Message: 10923

STAR-Net TG 9360 which used to be Harris County SO Ch.10 Information is alive with something. Haven't heard enough traffic yet to determine who and what they are doing there. Thought I heard something in reference to "the ballroom" earlier.
Could this be something related to the NBA All Star Game?
Plug it in and see what you hear. Mostly someone keeps keying it up once in a while.

Almost sounds like this is linked to a conventional frequency, possibly UHF.
Wonder if it could be one of the temporary repeaters set up downtown.

Appear to be SO deputies providing security for some function where private
security is also being used. Maybe this talkgroup is the new "special
event" talkgroup instead of using the mutual aid channels.

So folks will quit scratching their heads: 10.x.x.x is one of the
private IP blocks. Just like 192.x.x.x (or, more regularly,
192.168.x.x). It is only reachable from the network on which it exists,
and not from the outside.

# 10927. NBA All-Star Game

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-17 02:04:18 UTC
From: Eric C. Carlson
Topic: 10927  Message: 10927

The NBA (Bearcom) has several low power conventional repeaters setup. Several other frequencies are in use with simplex only. The Toyota Center LTR system is also in use but most of the action seems to be on the NBA radios for the activities at the GRB Convention Center. I'll be updating my web page below with frequencies and talkgroups; check it for updates.

# 10934. BorgNet (er StarNet) Updates

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-18 00:57:08 UTC
From: Michael W. Jones
Topic: 10934  Message: 10934

Had a day off, and decided to take a road trip. With Myles latest license info in hand, I decided to go poke around the Freeport, Galveston and Texas City sites with UniTrunker (Testing out my recently tapped radio).

Freeport is not on the air, but I witnessed a couple of vans (couldn't read the markings) parked inside the security perimeter at the base of the tower. It will probably on air in a month or two.

Galveston:

866.4375 Active Control Channel
866.8750
868.2125 Standby Control Channel
868.6000

Connect Tone 83.72
Neighboring Sites 5, 9, 11, 18

Talkgroups heard: 8976 - HCSO Dispatch 3, District 3; 14224 - Systemwide Mutual Aid; 20560 and 53296 (Both unconfirmed/unidentified)

Texas City:

866.3375
866.4375 Standby Control Channel
866.5875 Active Control Channel
866.6250
868.0625 Standby Control Channel
868.3000
868.4250 Standby Control Channel

Connect Tone 83.72
Neighboring Sites 5, 9, 19, 23

Talkgroups heard: Too numerous to mention, but 20560 was heard again.

20560 is used by STAR-Net radio techs.
53296 appears to be something similar

OK, thanks to Steve for shedding some light on this trailer. An ACU-1000 is a modular interface/interconnect system (interoperability). If you are interested in learning more check out http://www.jps.com/downloads/pdfs/acu1000app.pdf or google "acu-1000".

From: Myles Barkman
Topic: 10927  Message: 10937

FYI, I can hear the 452.2125 repeater here in Pasadena with a dual-band ham antenna up 30 feet.
It is weak but readable.
That is the security channel according to Eric's list.
Where and how high is Bearcom's setup?
The license says it is only for 2 miles radius around downtown.

Heard HFD related ops for the event on TAC-8 460.625 earlier today.

# 10938. High-End Uniden Scanners

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-18 03:14:57 UTC
From: Michael W. Jones
Topic: 10938  Message: 10938

I was at Fry's in Webster (Gulf Fwy and NASA Rd 1) and they are now carrying the high-end Uniden scanners, including the BC796, BR330T and BCD396T. Anxiously awaiting the BCD996T, and if Fry's carries it, I will be buying it there (if the price is right).

From: Myles Barkman
Topic: 10942  Message: 10942

http://corpinfo.radioshack.com/companyinfo/Internet_Html_Pages/footer.asp?x=357292235F

The meat of this is that Radio Shack is having some serious problems and
400-700 retail stores and two distribution centers. They also say they will
replace old, slower-moving merchandise with new, faster-moving merchandise.
Don't know what that means to the radio hobbyist but they sure haven't been
taking care of them over the recent past.
The "Radio" in Radio Shack stands for Clock Radio or NOAA Weather Radio now.

From: Michael W. Jones
Topic: 10942  Message: 10943

Personally, Myles, I have been referring to them as the Telephone and Television Shack. They left the business that started "Radio Shack" behind years ago.

Maybe they should have kept the "McDuff's" or "Videoconcepts" names, and let the "Radio Shack" name die gracefully. Poor Mr. Tandy would be rolling in his grave if he knew what his company had become - Alas, they even changed the corporate name to no longer make reference to it's founder.

Think this is just saying that 866.4375 control (Galveson) is a back-up site
if no others can be found (866.5875/868.0625) on Texas City site.
> 866.5875 Active Control Channel
(Primary Texas City control channel)
> 866.6250
> 868.0625 Standby Control Channel
(Secondary Texas City control channel)
> 868.3000
> 868.4250 Standby Control Channel

Think this is just saying that 868.425 control (Anahuac) is a back-up site
if no others can be found (866.5875/868.0625) on Texas City site.

It was the typical $500 range. Couldn't remember the exact price, since they had misprinted the price tag (They had two price tags that said BR330T, but one was obviously the BCD396T).

Topic: 10952  Message: 10952

Hope that this isn't posted twice..sorry if it is. Anyway...I'm in the process of cleaning up and reprogramming my BC780. I monitor(pd/fd) Deer Park, Pasadena and LaPorte. I'm using the WinScan780 software by Pozilla and have inputed the 12 control freqs from the list and the selected ID Tags from the list. No problems there. My question is...why am I picking up all of these other tags? I'm hearing talk from some port group on tanker slip size to, I guess Harris Co. Sheriffs.
ID Tags that have come up 6376/8976/9232/13872/5520/10416/7664 plus other ones. Do I have a software problem??
The control channels that I programed are the 12 listed on the list.
Any help or suggestions are appreciated! jim

Hi James,

I believe that I heard the same chase. I passed through Waller on the way home from work and saw 2 local police cars lined up side by side like they were going to drag race from (I think) the 2920 entrance east bound. A few minutes I heard "inform county we are in pursuit". After passing Prairie View I saw the sheriff with lights going and soon after the DPS lights going. The last I heard was to let DPS have him and they said they had him boxed in. During the chase (don't know if it was related) was something about explosives. I heard nothing about this chase on the news and until now I thought maybe I was the only one that monitored it. Because I was driving I could not verify what freq. or talkgroup but it was on StarNet Hempstead freq.

Regards,
Bart Lane

Is the scanner in search or scan mode?

To monitor specific systems, it must be in scan mode.
<Been there, done that, too.>

Interesting dilemma. My 780 starts in search mode, I don't know why.
One day it just decided to start this way.

Verify that the bank(s) the talkgroups are in are active and not
locked out. (See previous post, <> section.)

BC796D. Digital enabled, 1000 channels.

Or if you can wait, the BCD996T, that uses the dynamic memory like the newer handhelds, providing a 6000 channel capacity. It's been FCC type approved, just waiting for them to hit market (probably a couple of months from now).

Hold on there, before you throw the baby out with the bath water...

I was truly about to call you and try to come over when I got home but then the married-with-child part came home and blew holes in that plan much like buckshot in a lawyer.

Sorry I didn't answer you back on the personal email you sent me about a week and a half ago. I'm behind on getting a lot of things done I intend to do.

I'd like to take a look at that thing myself but more than likely, I'd have better luck bringing it here to the house so I can work on it while time allows.

And as for your question on how much I would charge, if I can really get it to do what you want it to do, a simple "thanks" is enough. I can't bring myself to charge someone for doing something I enjoy and helping someone along the way. That's why I do these frequency lists and this email list. I also empathize with folks that have to try to figure out these trunk tracker scanners.

But I will say that the 780 will be obsolete here in a few years and you may want to look at getting something newer that have it's EPROM reflashed.

I'll try to get with you later about that scanner.

I heard that. Waller County dispatch came on and advised that a Harris County pursuit was approcing Waller County on Kickapoo near Castle. One officer asked what channel. Dispatch responded D-4. I turned on my Harris county bank and hit scan. D-4 was the first one to pop up. I parked on this channel. They went down Fields Store Rd. Then made it over to FM362. Then I heard he was on foot in the Bayou Bends Apartments in the city of Waller. Harris county dispatch kept asking for a discription with no response. Then an officer said one in custody.

This ended about a 1/2 mile from where I work. I had business to do about a block from there. I talked to them they did not know what was going on untill they were surounded. There were more police cars than could be counted. Officers jumping fences behind their business. The suspect had missed his turn on Waller street and crashed in the ditch is why he went on foot. It did not take long to capture him on foot.

# 10970. Help for a beginner

I'm new to the scanning hobby. I've just purchased a Pro-97 and have a couple of questions. I've read several FAQs, but they all seem to just give definitions. I live in the Tomball area and would like to monitor police/fire activity. I have the frequencies programmed into the radio, but I have yet to hear any traffic. I've been listening for an hour or so and you'd think there would be some sort of talk going on. I know Tomball is small, but would it be silent for over an hour?

Also, how do I set up the talk groups for Starnet? I've programmed the control channel and the the info for precinct 4 constables, but does each talk group have a separate bank? Can I monitor each talkgroup exclusively?

Thanks for your help.

Let us know what frequencies you've tried.
This is what I have for them.
Police 453.525
Fire 158.805
I live pretty far from Tomball so it's hard for me to personally verify they still use these.
Also don't know if there are plans for them to move to the massive STAR-Net trunking system that many area agencies are using now.

The UHF frequency was going strong about a month ago when I was down there. Fire is still active, also. PD is signed on with STARNET for mobile data service right now. If I get a chance, I will monitor the Tomball Site for possible PD talkgroups. But since Site 2 neighbors Site 1, there should be Tomball area radios occasionally affiliating with Downtown. Maybe someone monitoring downtown would know.

BTW, I say going strong. The Tomball cops don't really talk all that much. Got a feeling they do a lot of their status change and calls on their MDT's.

Do you have the right frequencies in? Like Myles said the PD is on 453.525, Northwest EMS (practically Tomball EMS) is on 152.99, and the FD is still on 153.95, but they either went simplex (because of JV) or made their repeater have a lower wattage.

Just heard a fire call at "Nevada and Pecan" on 58064, which puts it in
South Houston, 58096 was called "Tac-1".

Yes, I've got the correct frequencies. Also, I've got a Pro-97. Do I need to input a PL tone[as noted on radioreference] to be able to hear transmissions or is that extraneous information?

When you guys say that a frequency is "going strong" do you mean that there are constant transmissions? I thought it'd be non-stop, but I guess that is not the case here in Tomball. Thanks for the input.

I'll listen more....maybe it was a quiet night.

They have their own talkgroups on the EDACS trunk system like many of the smaller departments do.
They have 08-082 and 08-083. But I feel these are just unit-to-unit talkgroups.
Can someone verify if there is actually a dispatcher or base radio at these smaller PDs that monitors these other talkgroups?
What circumstances take mobile units to these talkgroups? Do they use them after initial dispatch on the SO dispatch talkgroups or do they use them mainly for idle chit-chat?

As far as being able to hear them, the PL would be extraneous information.
You would only really need that if you were hearing interference or hearing
other agencies on the same frequency and wanted only to hear a particular
one.
Make sure any attenuator setting the scanner might have is turned "OFF".
Are there other agencies on other frequencies that you CAN hear?

From: Myles Barkman
Topic: 10917  Message: 10982

Good catch!
58128 and 58160 are most likely South Houston FD as well since all those talkgroups were keyed up in sequence on the morning of the 14th. Probably a TAC-2 and maybe an Arson or training TG.

>Can someone verify if there is actually a dispatcher or base radio at
these
smaller PDs that monitors these other talkgroups?<

yes they have their own dispathchers, but they are seldom used only
for in city services ie. warrant service ect

> What circumstances take mobile units to these talkgroups?

the small pds willis,oak ridge,and so on are dispatched thru the main
SO channels ,when they get a call thier pd channels become tac
channels.(also the pds will use thier cahnnels for thier in city policing)
this is how thier channels work with SO, the pds have a tac and a base
channel, I will use willis as an example, willis has talk channel in
thier radios they like all of the small pds can talk to other SO units
for mutual aid. the tac channel in the SO radio is not available in
the smaller pds radios.

> Does anyone know the freq. for Oak Ridge North Police ?
they are dispatched thru MCSO 2
pd channels are:
08-082/1090 Oak Ridge North PD
08-083/1091 Oak Ridge North PD TAC

# 10988. Mardi Gras Galveston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-25 22:41:25 UTC
From: Kevin Chessher
Topic: 10988  Message: 10988

Harris County has a COW deployed in Galveston, unknown what frequencies are in use, but they have Mutual Aid 3 (14224) linked to Events 2 (56016 Galveston System). So if someone affiliates on MA3 at a site you are monitoring, you should hear Events 2 from Galveston also.

OK, didn't know there was a MCSO-6 talkgroup.
Just got a closer look at the radioreference site and noticed a few newer talkgroups from the last time I updated my Montgomery County list.
Maybe someone can give some more insight into how some of these work/are used:
00-041 Lifeflight link
05-021 MCSO-6 Woodlands Town Center (is this strictly used by MCSO?)
09-001 PHI AirMed (this was first AirMed talkgroup found)
14-013 PHI AirMed (what are the additional ones used for?)
15-096 PHI AirMed
15-097 PHI AirMed "Texas Command"

# 10991. Re: [HoustonScan] Mardi Gras Galveston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-26 02:44:10 UTC
From: Myles Barkman
Topic: 10988  Message: 10991

Noting most of the Mardi Gras activity on the usual talkgroups:
43456 never identified
43488 never identified
43520 never identified
52880 Galveston EOC
55984 Event A
56016 Event B
56048 Event C
56080 Event D
56112 Event E
56144 "Public" or Event F
56208 Event G
56240 Event H
56272 Event I

Then there are the normal law enforcement dispatch talkgroups:
50032 Galveston County SO Ch.1 (Island/Bolivar)
50064 Galveston County SO Ch.2 (Mainland)
52208 Galveston PD Dispatch
and other cities down there

The first three talkgroups I have listed have been a mystery to me for
years.
First of all, they don't follow the normal talkgroup programming compared to
the rest of the users on the system.
At times, they sound like some sort of beach security. Anyone know what
kind of contract security might be used on the beach or other areas at Mardi
Gras?

451.575 MHZ is a service I think is Bay Star. This may
be a shared freq or LTR trunked. I have not checked
the FCC site yet. I plan to soon and will post if I
remember to. If you find it sooner let us know.

451.275 is part of this 5 channel LTR trunk in downtown Houston.
Eric shows an ambulance service with that freq as their home channel on
talkgroup 0-01-059.
It is not identified so maybe we can help confirm it.

I heard the dispatcher on Thursday say Bay Star EMS. I
have been to busy to follow up. When I saw the
question about Bay Star I thought I just might have
part of the answer. I can not listen to LTR the way I
would like. PRO 95 will not track LTR. I will get a
PRO 96 sometime. Thanks for the reply.

From: David
Topic: 10998  Message: 10998

I don't know if anybody has been to this webpage
http://www.radioreference.com/modules.php?name=RR&ctid=2623. If not
this has a list of scanner frequencies

# 10999. VOX Recorders for recording Scanner action while away from home

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-02-27 15:31:52 UTC
From: Ben - ne5B
Topic: 10999  Message: 10999

Several years ago I had a fairly inexpensive microcassete recorder with VOX. I think it was a GE - it cost $40 or less.

With 2 AA batteries I could leave it on in VOX mode for a week at a time and it would faithfuly record every EMS dispatch all the action and test pages. I had a digital clock that would annouce the time every hour on the hour. So I coudl tell with in 60 minutes when each transmission was made.

Fast forward to one year ago:

About a year ago I bought a new Fancy Digital Recorder (no tapes) with Vox mode (4 - 6 hours record time). I played around with it for about 30 mins one evening to verify that it would work just like the old analog recorder, recording the clock's hourly annoucements and such. All seemed fine. After just one day it had completely drained the batteries. I put in a fresh set of batteries to find that it had Recorded less than 5 minutes of action. I gave it a 2nd chance, again by the time I got home the batteries where drained again...

Any recommendations for brands of Digital recorders that don't eat batteries???? Or one that comes with a WallWart so battery consumption won't be an issue????

What about PC Software that operates in VOX mode that will record the action to .mp3 or .Wav files ?

Thanks in advance for your answers,

73 Ben - ne5B

PC program:

Total Recorder from www.highcriteria.com
It does mp3/wav, etc. and has a clock scheduler built in. Very
solid. Auto file name, size limit/rename at limit (ie, file1, file2,
file3, etc. each being xx size)

Reasonable - I think $25 or so.

Mark,

Thanks for the reply. High Criteria looks like a really good program for the price.

However after reading the manual (PDF download) there's no mention of VOX recording.

Using the vox mode on the tape recorders, only sounds (transmissions) are recorded.

This Program would be great for manually recording things or using the timer feature to record Shortwave Broadcasts, Amateur Radio Nets and things.

I'm going to email the company to see if they've looked into or offer VOX recording and just didn't document it in the manual.

Thanks again for the reply
Ben

From: Michael W. Jones
Topic: 11006  Message: 11006

Got a close call hit on 469.075 tonight, and I saw a AAA of Texas flatbed wrecker parked across the street from where I was jawing on his radio. Since I couldn't switch over to Cougar's Trunked system to confirm talkgroup, I noted that I only had one towing company with LCN 12 (464.075) as their home.

Keep your ears open, as I suspect, and just need confirmation, that they are using 0-12-002 on Cougar Communications.

I am confirming SH FD dispatch is 58064 and TAC 1 is 58096; I am not sure about the other ones listed.

Also I got 2 new hits on TG 62240 and 63520. Both of these TG's had no audio but they popped up on UASD. They came up within a minute of each other.

DPS has historically used half-duplex two-frequency mode where you have to monitor the base on one frequency and the mobiles on another. Depending on how close you are to the mobiles, you may not hear them.
Locally, DPS does use a repeater where you will hear the base and mobiles equally as well. It is on 159.210 MHz. One repeater is in west Harris County and the other is in Texas City.
Otherwise, the base uses 155.460 and the mobiles use 154.680 MHz.

62240 and 63520 are not aligned to the regular convention of talkgroup numbers on STAR-Net.
I'm not saying that they can't exist, but normally, when this happens, especially using software, it's a good bed it is bogus. I catch LOTS of bogus talkgroups with the T4Win software. The trick is being able to weed those out. When they fall in between regular talkgroups, it's probably bogus.
Also, if it only came up once, and hasn't come up again in weeks or months, it's probably bogus too.
But keep in mind that there are a few talkgroups used in Chambers County that are in-between normally used STAR-Net talkgroups. They are EMS 1, EMS 3 and EMS 5. Rules are meant to be broken.

These are even multiples of 16. Odd multiples are preferred but not required. If it's not a multiple of 16 (even or odd), then it's bogus. One of these days I'll fix that.

At least there's enough time for technology to catch up and become
somewhat affordable.

I can pretty much guarentee that cable companies are rejoicing... More
people will be converting to them. It's cheaper to get digital cable
television (where the cable company can easily switch to a different
reception frequency, in receiving and propogating broadcast TV) than it
is to purchase a digital capable set (at least, currently).

# 11020. Re: [HoustonScan] Officer shot suspect in Pasadena

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-01 06:17:41 UTC
From: Myles Barkman
Topic: 11017  Message: 11020

OK, wasn't sure if it was Hermann or Ben Taub. Should have figured they would take a suspect to Ben Taub by ground.

Didn't catch what apartment complex it was either and can't find one with an address in that 800 block.

Oh yeah, another intersection to watch out/listen for is Jenkins and Burke. Lots of wonderful folks around there too.

# 11021. pasadena officer involved shooting

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-01 05:45:21 UTC
From: Myles Barkman
Topic: 11021  Message: 11021

At around 10:40pm, there was an officer-involved shooting where an officer discharged his weapon towards a suspect, then later found that suspect within a couple of minutes and had them transported to (Hermann Memorial?). They had Lifeflight on stand by but opted to run him by ground for some reason.
Officer got him in the upper part of the neck.
This occurred in the 800 block of Richey St I believe in some apartment complex.
Didn't catch what started the whole thing rolling. That area of Pasadena is famous for it's high crime. Common streets you will hear involving serious crimes will be Rickey, W Harris, W Jackson, Shaver, and Thomas.
It's only a couple of blocks either direction, maybe 1/4 sq mile, but it accounts for a lot of the calls.
Think that's where Pasadena set one of their PD command buses/trailers at an apartment complex as sort of a substation because of the high crime so that folks would have better contact with PD.
Surprised the thing didn't get flipped and torched (or shot up).
Unfortunately, I don't think Katrina can be blamed for any of this. It's been like this for awhile.

Does anyone know if alarm levels above 5 are actually used/defined in the
Houston area?
Dallas has alarm levels up to 7 in their system.
Check out this handy reference chart to tell you who responds for what call.

# 11023. Re: [HoustonScan] VOX Recorders for recording Scanner action while away from home

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-01 07:19:36 UTC
From: James Sitton
Topic: 10999  Message: 11023

Back in the 80's we had a Bearcat 250 we recrorded with. It had 2 screw terminals that could be wired to pause a tape recorder. Some how we could set the channels that would activate the recorder. Its a shame those 250 's seem to flake out after a few years. I have not seen this feature on other scanners, too bad it was a cool feature.

Mark W Earle <wa2mct@...> wrote: PC program:

Total Recorder from www.highcriteria.com
It does mp3/wav, etc. and has a clock scheduler built in. Very
solid. Auto file name, size limit/rename at limit (ie, file1, file2,
file3, etc. each being xx size)

Reasonable - I think $25 or so.

THERE IS NO DISP 5 OR 6, ONLY 1-4.
THE WOODLANDS TOWN CENTER ID CALLED DISTRICT 6 BY ITSELF AND WORK OFF OF
THE "WOODLANDS TOWN CENTER" TALKGROUP...00-046

DISTRICT 5 IS NOW THE LAKE CONROE/WALDEN AREA BY ITSELF AND IS ON SO-1
DON'T KNOW ABOUT 05-021 UNLESS THEY ADDED A NEW ONE....I WILL CHECK AND
VERYIFY.

RE: SMALL PD'S
MOST SMALL PD'S HAVE THEIR OWN TALKGROUPS THAT ARE MOSTLY B/S OR BACK
CHANNELS BETWEEN OFFICERS.

MAGNOLIA, MONTGOMERY, SPENDORA, AND WILLIS ARE THE ONLY ONES THAT I KNOW
OF THAT GET SOME CALLS DIRECT AND DISPATCH THEM THEMSELVES.
ALL OTHER CALLS GO THROUGH SO DISPATCH.

From: Myles Barkman
Topic: 10999  Message: 11026

Yeah, I think you hit the "." decimal point key when it was on a channel and it would put a dot in the corner of the display to indicate that if it stopped on that channel, the record terminals in the back would go hot and if hooked up to the remote jack of a recorder would let you record when it stopped on that channel.
Never used that feature myself, but I used the indicator to mean something else about the channel I put them on.
Think my 250 crapped out from the usual internal power supply overcooking the electronic parts and frying it's own brain.
Think that's when I got my Pro-2004. Besides the display, it's still running, 24/7 behind me.

District 6

The Montgomery County Sheriff's Office Patrol District 6 encompasses The Woodlands Town Center which is located in the Southern portion of Montgomery County and is surrounded by the District 2 patrol area. The 16 current positions, which include a District Commander, District Sergeant, Corporal and 13 Deputies, are all contract positions between Montgomery County and The Town Center Improvement District. The Woodlands Town Center Improvement District (TCID) of Montgomery County was created in 1993 by the Texas Legislature as a local governmental agency whose mission is to promote, develop, encourage and maintain economic development for the public benefit of The Woodlands downtown area.

The Woodlands Town Center is largely a business district with well over 500 retail business, 170 of which are located within The Woodlands Mall which has 1.2 million-square-feet of in-closed retail space. Also within the district are several Corporate World Headquarters, 30 restaurants, 6 major hotels, 2 theaters and The Woodlands Waterway. The Woodlands Waterway is a 1.25 mile-long water feature lined with parks, businesses and private residences. It flows between The Woodlands Mall and The Cynthia Woods Mitchell Pavilion which during concert season will accommodate nearly 17,000 people.

In addition to conventional patrol methods as of May 2005, District 6 will have a designated full time Bicycle Patrol Unit consisting of 4 Deputies. A bicycle unit can provide specialized attention to retail and other confined areas specific to District 6. They are capable of quick responses into areas within high vehicular and pedestrian traffic. Rapid response not only increases the chances of apprehension, but also serves as a deterrent to criminal activity.

The object of a Bicycle Patrol is to foster community relations with a greater emphasis on community oriented policing and the obvious increase patrol effectiveness. The bicycle patrol enables officers to provide specialized attention in retail parking lots, structures, parks, pathways, and other areas not easily accessible to motorized patrol vehicles. While bicycle patrol is neither a cure nor a replacement for motorized patrol, without question it is an effective method of improving face-to-face communications between officers and the citizens, who live, work and play in The Woodlands Town Center.

In addition to their regular patrol duties, District 6 Deputies take part in many of the community programs held within and around The Town Center. They strive to better relationships and educate kids and grown-ups alike about shoplifting and other business related persons and property crimes.

The South Montgomery County office is located at 9200 Grogans Mill Road The Woodlands, TX 77380

# 11029. STARNet and APCO-25

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-05 22:47:55 UTC
From: Louis Maag
Topic: 11029  Message: 11029

It seems that the STARNet folks may be doing more than just thinking about APCO-25 testing. I stumbled accross a Project-25 Control Channel the other day and finally got a chance to run Pro96Com on it to get the data. It seems pretty dead right now, I had not observed any activity on it, but it is Sunday. The important part is that it is advertising the CC and 3 alternate CC's. All of the frequencies belong to STARNet. It appears as there is only one tower right now, the following is the Pro96Com Tower file:

```
==================================
FileVersion:3
-TowerInfo
#This section is here for information only. With the exception
#of the Call Sign(s), This data is not Read back into the program at
all.
System ID : 1a7
System Name : Unk Houston Area
WACN : bee00
Tower Number (Decimal): 101
Tower Number (Hex) : T0101
Tower Description : (null)
Control Capabilities : Data,Voice,Registration
Call Sign(s) : Unknown

-Tables
#Format: Table ID,Base Freq,Spacing,Input
Offset,Assumed/Confirmed,BandWidth
00,851.00625,0.00625,-45.00000,"Confirmed",0.00625
01,762.00625,0.00625,30.00000,"Confirmed",0.00625

-Frequencies
#Format: Channel,Usage,Frequency
"00-0837","a",856.23750
"00-0877","c",856.48750
"00-0997","a",857.23750
"00-1037","a",857.48750
==================================
```

Three of the Frequencies are from the Downtown site and one (856.2375) is from the Tomball site, I need to run Trunker from scratch on the downtown site to verify they are not being used on the site any longer. I cannot hear Tomball from where I am.

I have posted thin information on the Texas Forum of RadioReference.com where I am more likely to see any responses.

856.4875 I noticed had not been used on the downtown site since November last year.
857.2375 and 857.4875 were used as recently as Feb 24th.
I had not run T4Win on the downtown system since then. Guess I'll give it a run now.

Which one had the control channel on it at the time?

857.4875 is still very active on the Downtown site, according to UniTrunker.
The others have not been active for a few days.

Thanks Lou. That's an excellent scoop.

For those that don't have a P25 capable scanner, get a copy of
UniTrunker and add a discriminator tap to one of your existing radios.
You won't hear anything but you will be able to see a live display of
who is talking to whom. Even after you've upgraded to a newer
digital-capable scanner, this is a good use for older analog-only radios.

As for channel overlap between the two systems: as long as the channel
is marked as "do not use" on one of the systems - that'll work just fine.

Just thinking to myself about the scope of such a migration - it's a
very tall order.

Several of these are on the list for the west Huntsville tower we've been
waiting to hear come online.
It's interesting that it broadcasts system 1A7, decimal 423 instead of 2318.

Date: 2006-03-06 18:04:16 UTC
From: Louis Maag
Topic: 11029  Message: 11040

The SysID for all Project 25 systems are a three digit Hex number.
All Motorola SysID's are a four digit Hex number. I am not sure
of the reason for this, just an observation confirmed by some
"older Moto-Heads". SysID's are seldom referred to in the decimal
form but if it was STARNet would be 8984.

A further update as of this post-time:

Yes 857.2375 & 857.4875 are both still being used on the downtown
site as voice frequencies and still being announced by the P25
as alt CC's. I cannot hear Tomball from my location, so I have no
idea if 856.2375 is still being used as a voice frequency there.

Also, as of this post-time, there has been no activity of any kind
on this P25 system other than the system advertising normally seen
(and posted by me on the first post). In other words, no voice,
no affiliations, no other kind of messages so I am not sure what
is up with this yet. Rick, have you any ideas?

I find these facts interesting. They suggest to me that STARNet has simply started testing. That is no quick and easy process. The fact they are using a distinct system suggests replacing 2318 might be a while.

I listened on the way to work and started picking up some signal around LBJ hospital.
Got stronger towards 290. Compared signals to Clodine and Tomball towers and seemed to more closely match Tomball.
The control channel sounds a lot different that your normal Motorola Type 2 control channel. Didn't realize at first that I would have to have the P25 turned on just to decode the control channel. So the control channel is actually using P25. Does that mean that all voice comms on the system would necessarily have to be digital or can they also be analog?

For you folks on the west side, how does the signal strength compare to Clodine and Tomball?
Apparently, Louis hears this new thing and can't even hear Tomball so is it possible it could be at the Clodine site?

Noticed some Galveston talkgroups logged on the downtown site today.
49616
50032
50064
50448
52240
These were active between 9 and 11 this morning.
Also noticed the radio folk's talkgroups 1296 and 45424 active earlier
today.

At Hwy 6 and Bissonnet it's about the same signal strength as Tomball (868.950). I'll try to make a trip out to Tomball tomorrow and see if it's at that site. And yes, all comms will have to be APCO-25, no analog.

# 11049. Re: STARNet and APCO-25

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-07 01:08:56 UTC
From: bpckty1
Topic: 11029  Message: 11049

I'm leaning towards Tomball, and I live near the Clodine site.

--- In HoustonScan@yahoogroups.com, "Myles Barkman" <kg5ai@...> wrote:
>
> I listened on the way to work and started picking up some signal around LBJ hospital. Got stronger towards 290. Compared signals to Clodine and Tomball towers and seemed to more closely match Tomball.
> The control channel sounds a lot different that your normal Motorola Type 2 control channel. Didn't realize at first that I would have to have the P25 turned on just to decode the control channel. So the control channel is actually using P25. Does that mean that all voice comms on the system would necessarily have to be digital or can they also be analog?
>
> For you folks on the west side, how does the signal strength compare to Clodine and Tomball?
> Apparently, Louis hears this new thing and can't even hear Tomball so is it possible it could be at the Clodine site?
>
> ----- Original Message -----

> Subject: [HoustonScan] STARNet and APCO-25
>
>
> > It seems that the STARNet folks may be doing more than just thinking about APCO-25 testing. I stumbled accross a Project-25 Control Channel the other day and finally got a chance to run Pro96Com on it to get the data. It seems pretty dead right now, I had not observed any activity on it, but it is Sunday. The important part is that it is advertising the CC and 3 alternate CC's. All of the frequencies belong to STARNet. It appears as there is only one tower right now, the following is the Pro96Com Tower file:
-Frequencies
#Format: Channel,Usage,Frequency
"00-0837","a",856.23750
"00-0877","c",856.48750
"00-0997","a",857.23750
"00-1037","a",857.48750
==========

Three of the Frequencies are from the Downtown site and one (856.2375) is from the Tomball site, I need to run Trunker from scratch on the downtown site to verify they are not being used on the

site any longer. I cannot hear Tomball from where I am.

I have posted thin information on the Texas Forum of RadioReference.com where I am more likely to see any responses.

>form but if it was STARNet would be 8984.
>
>
Here's the postcard intro to P25 system ids. The system's "identity" is
the WACN plus the Sysid. From Lou's post earlier we see BEE00-1A7. It is
possible for another system to exist - somewhere - with a Sysid of 1A7.
If it's properly coordinated, it should have a different WACN.

Using a loose telephone analogy - the WACN is like the area code and the
Sysid is like the 7 digit telephone number.

>Also, as of this post-time, there has been no activity of any kind on this P25 system
other than the system advertising normally seen (and posted by me on the first post). In
other words, no voice, no affiliations, no other kind of messages so I am not sure what is
up with this yet. Rick, have you any ideas?
>
>
Lou (and everyone else) - since this is a P25 system; radios must first
register with the system before affiliating to a talkgroup. You will
want to look out for registation messages too. I think you could have
two radios registered on the system but not affiliated to any talkgroup.
Even without group calls, the two radios could call each other. Has
pro96com caught any radio ids?

One item to look for (for the perpetually curious) - is this a Motorola
system or MA/COM ?

Some ways to tell ...

There are some P25 control channel messages unique to Motorola - do any
appear on this system?

Is the signal C4FM or CQPSK (a Motorola feature)?

Next time you get the chance you might try the following talk groups
on the digital system.

60096
60112
60128
60144
60160
60176
60032
60048
60064
60080

and I think you'll find the system has been up for some time now.

From: Louis Maag
Topic: 11029  Message: 11054

I plugged Tomball in and my decode rate on the Tomball CC is
from 0% to 12%. Of course you cannot directly compare the
96 kbs stread decode rate with the 3600 but if I had to guess
in my situation it is much closer (in rate) to my Missouri
City decode rate. I will agree that I don't think it is
in the Clodine area as it is stronger than my Clodine reception.
My Richmond reception is about equal to the decode rate, but
based on the differences I would guess that being equal is
not a good judge, I would say by 3600 decode rate should be
better than a 9600 from the same location, hence my thought of
Missouri City. The bothersome part of that is shouldn't someone
in downtown be able to at least hear it if were in Missouri City?

I realize that there was some testing of P25 CAI modulation on the STARNet on some "test" TG's awhile back; howver, there is really no connection between any TG on a SmartZone Type II Motorola System and an Project-25 System.

What causes you to believe that this P25 control channel has been up for awhile? Certainly if it had been operational for any length of time, someone else would have spotted it like I did.

Hmm, yes, but even if the two radios were talking on the system,
they would generate some traffic on the system. Other than the
table and channel and system/tower information, nothing else seems
to be flowing.

Tomorrow (later today) I will run Unitrunker on it and then try
to get a packet dump which I will send you off list.

What kind of messages would be Moto unique?

Also, unless there is some voice traffic, how would we tell if
it is C4FM or CQPSK?

Come-on Rick, give with the details. 8^)

Galveston EMS is a division of the Galveston County Health District. They provide non-emergency and emergency services for the island. With the pullout of GoldStar EMS they were providing some services to the mainland also. The rest of the Galveston County area is trying to get their EMS figured out and some cities have already done so. According to their website they run 4 ambulances out of 4 stations and 1 peak time ambulance. Yes, UTMB and John Sealy are the same. And yes, it is the only hospital on the island.

Look at the waveform; the CQPSK waveform is very distinct compared to
the C4FM waveform. You can also hear the difference.

There is some relevance of modulation type to determining location.
CQPSK = simulcast so if you are trying to locate the transmitting site -
you may be dealing with multiple signal paths - good luck on that one.

There are a handful of programs that will turn your computer's
microphone or line input into a poor-man's oscilloscope. Also - there is
a program included with the UniTrunker suite that will display an eye
pattern. The eye patterns for the two waveforms are different (the
program also displays eye patterns for EDACS and Motorola). The next
release of UniTrunker will display modulation type.

DPS has been moving to P25 conventional for a while now.

I have no idea how long it will take and to what extent StarNet will migrate to an all-P25 trunking system.

No, not software. One company sells a decoding module - but it's really
meant for plugging into one of their radios.

It's aircraft band, but 123.025. If your talking FM only, then 155.460
or it's APCO-25 equivalent.

From: Myles Barkman
Topic: 11013  Message: 11076

FCC doesn't even show having anything in Huffman. What frequency are they
on up there?
There is a license for a tower in Dayton for 159.090 and 159.210 MHz.
I think the west Harris County repeater on 159.210 MHz with PL 118.8 Hz is
dead now.
Guess they are just using duplex on 155.460/154.680 out there.
These are the DPS bases I can hear on a regular basis:
155.460 Downtown Houston or Jersey Village area?
159.210 Texas City PL 136.5
159.210 Beaumont PL 107.2
155.445 Conroe PL 162.2
155.535 Richmond transmitter PL 146.2
155.685 Angleton transmitter PL 162.2

Are these all the local transmitters?

From: elentz1
Topic: 11013  Message: 11077

DPS will be going digital in this area in the next few months. The DPS equipment on the Dayton tower was moved to the Huffman tower back in November or December. This may have had something to do with the Beaumont tower being destroyed by RITA.

I'm trying to get a list of the tower locations and their frequencies now and will pass on when I do.

Unless I'm mistaken P25 can be analog or digital.

Here's where the confusion came from:

P25-compliant systems are being increasingly adopted and deployed. Radios can communicate in analog mode with legacy radios and in either digital or analog mode with other P25 radios. Additionally, the deployment of P25-compliant systems will allow for a high degree of equipment interoperability and compatibility. Specifically, P25 systems can be maintained and upgraded cost effectively over the system's life cycle, thus meeting user requirements, achieving interoperability and security, promoting committed manufacturers to provide compliant products, fostering competition and achieving cost-effective emergency/safety communication solutions. In light of recent worldwide terrorist activities, interoperability among first responders is a key initiative of many countries.

P25 standards use the Improved Multiband Excitation IMBE vocoders which were designed by DVSI to encode/decode the analog audio signals.

P25 may be used in "conventional" mode without any intervening equipment between 2 radios, or in a trunked mode where traffic is automatically assigned to one or more voice channels by a Repeater or Base Station.

The protocol supports the use of DES encryption (56 bit), Triple-DES encryption (112 bits), or AES encryption at up to 256 bits keylength (or no encryption).

This just means that P25 radios can also do analog, just like your average cell-phone.

Yeah ... 10.7 Mhz IF (which is fairly common). The other limitation as
quoted from the web page reads:

"The ARD25 does not add trunking capabilities to your receiver."

So you can hear voice but you'd have to scan conventionally.

No, a Pro-95 has 3 IF's: 380.8 MHz, 21.4 MHz, and 455 KHz
none of which fit the requirements of an ARD25.

As was pointed out earlier on the thread, why would someone
spend $400 to buy a converter to hook up to another scanner
when the digital scanner can be had for less (when on sale)
and for $100 more at retail?

Lou, USSS and ATF come up most (Federal lists) as users of this frequency.
As of late, it seems USSS has converted to digital....

From: Myles Barkman
Topic: 11083  Message: 11095

Been watching the Alvin site since about 7:30pm and have noticed these
Galveston County talkgroups:
49936 Dickinson Fire-1
54480 Gold Star EMS primary patient reports to hospital
54544 Santa Fe EMS
54576 Santa Fe Fire-1
54608 Santa Fe PD or FD TAC-1
54704 Santa Fe PD-1
55504 Gold Star EMS patient reports
55888 Galveston County Countywide Fire
56912 Texas City ISD

Might check out the new site in Texas City for activity too.

I have alos noticed quite a number of the Galveston System TG numbers
appearing on the downtown site. Ealier today recorded a set of transmissions
between an EMS unit and Santa Fe on Santa Fe Fire 1 and Santa Fe EMS
as they were having trouble communicating using the truck radios. In
conversation they said the radio said it was using tower 12 and they had
no idea where that was although we can recognize it as Pearland. They
were apparently North Bound on 45 to the city running hot.

I would guess the the transition for the Galveston clients must be
well on its way, I even got the Galveston Co. Marine 1 (50864) on
the downtown site.

True. It's just that when monitoring Pierce when going to Sugar Land, I've always heard this frequency from the repeater. Yesterday was the first time I had heard them on simplex. Usually, when the troopers wanted to go "car-to-car" they would switch to their Borgnet talkgroup.

With DPS you have to remember they can use simplex on
all VHF frequencies. I heard the same as you did here
in Fresno.

# 11108. STARNet and APCO-25

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-11 05:32:37 UTC
From: Rick Parrish
Topic: 11029  Message: 11108

Just confirmed - it's C4FM so it's not simulcast.

The only other extra bit of info I can add at this time is the control channel advertises two bandplans - one standard 800 mhz plan and one 700 mhz plan. I think most of Motorola's 800 mhz radios with also cover 700 mhz so this is probably just a "boilerplate" configuration. Someone *may* want to keep an eye open for Houston area licenses in the new 700 Mhz public safety band.

From UniTrunker ...

The four control channels ...

*Site, LCN, Control, Listen, Lockout, Frequency, CTCSS, DCS, "Label", First, Last, Confirmed, "Notes"
257,837,1,0,0,856237500,0.0,0,"",20060311031401,20060311032306,0,""
257,877,1,0,0,856487500,0.0,0,"",20060311031329,20060311032309,0,""
257,997,1,0,0,857237500,0.0,0,"",20060311031329,20060311032312,0,""
257,1037,1,0,0,857487500,0.0,0,"",20060311031329,20060311032312,0,""

The bandplan ...

*Site,Min,Max,Base,Spacing
257,0,4095,851006250,6250
257,4096,8191,762006250,6250

No radio ids or talkgroups so nothing to worry about (yet). For those of you sweating the thought of spending $400 for a new radio - just be glad of two things:

1. It will probably be a while before this new system gets busy so you've got some time to plan and save $.
2. This isn't an ESK enabled EDACS ProVoice system - there isn't anything on the market to listen (ie. at least with P25 you have choices).

Now ... if I could just find a Site Pro system nearby.

They need to do something. Friday morning on a fatal accident in Montgomery County units on the scene were forced to turn off their outside speakers as the skip from Pearce was so annoying. Austin was even coming through at times.

# 11110. GC EMS Talkgroups

Now that Galveston County has switched to STARNET, does anyone know the talkgropus for EMS? I dont know how many different EMS services there are now that Goldstar pulled out, but there are a few different ones. I know for sure Texas City created their own EMS but they may be operating on the TC Fire channel. Any help?

Two more things to add on this new system.

Based upon control channel behavior, it is definitely a Motorola system.

Location is somewhere near Tomball. I get good coverage at Hooks Airport, downtown Tomball, along FM2920 and FM149 - oops - I mean SH 249. As I head towards Houston from Tomball the signal drops off before FM1960.

I wonder if it would reach all the way to Plantersville.

I can *hear* the control channel in (a) downtown Houston, (b) US290 and (c) north I-45 - but it's got a lot of static and hiss mixed in. The signal is crisp & clean in the Tomball area but static first appears as you approach FM1960 along with a corresponding decrease in decode rate - and gets worse from there.

It does reach Plantersville, and I get two bars on the BC785D. Of course, I can't track anything with that model as far as 9600bps goes, but the signal is there. I was actually about two miles west of Todd Mission in Grimes County in the forest.

Yeah, we got it. Didn't notice you had an attachment the first time.
I see you were picking up a signal on 856.3875 MHz also.
That's probably Metro's LTR system from downtown or William's tower.
What kind of antenna did you have hooked up to it?
Also, folks check out the Nextel signal on 856.5625 MHz. See how wideband
it is compared to 856.3875 and 856.4875?

Let me know when you're ready to donate that puppy!

Are you not able to hear the Alvin (AKA Dickinson) tower?
It's control channels are 868.0875 and 867.6625. Right now it's on 868.0875 MHz.
The tower is less than 6 miles to the west of I-45 and FM 517. You should be able to hear it very well.

# 11122. STARNet Willis site?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-13 00:41:19 UTC
From: Myles Barkman
Topic: 11122  Message: 11122

Just noticed some freqs under WPXP610 for the Willis site located near
League Line Rd and Longmire east of Lake Conroe.
856.4625, 857.4625, 858.4625
This is on a tower that carries one of the simulcast sites for the
Montgomery County EDACS trunk system.

Can someone up in that area keep an ear on these freqs and see what if
anything might be going on with those?

Wait a minute. It just occurred to me that those are the three MDT freqs
that are used at multiple sites across the STAR-Net system. Those won't be
used for voice channels at all.
That is, unless Montgomery County stops using it's EDACS system and becomes
another victim of the Borg. So right now, it's the only MDT coverage site
that is not also used for voice repeaters. So is there adequate STAR-Net
coverage between the Tamina and Huntsville towers? Just has to work along
I-45.
From my estimates, the Tamina tower should work fine up to the southern
county line of Walker County. The Huntsville tower(s) should work down
toward around Willis, so it looks like the answer is "yes".

There aren't many.

Open standard ... multiple vendors for equipment.
All digital format so (a) easy to encrypt and (b) easy to support
low-speed data applications like MDCs and AVL.
Some security improvements over older formats (to prevent unauthorized
radios).

The downside is the audio quality ...

Well at least with Pro96Com running, if they turn a radio
on it should generate something on the system. If they
talk on a TG, we will get even more info. Now if my
796D could only hear as well as my 96 I could probably
get it recorded too, but it barely can hold the CC channel
for any length of time. <sigh>

However, if you are actually listening in with an APCO 25 radio with an agency using it, not having to put up with crappy audio from a scanner, the digital voice is extremely clear. Our dispatchers in Grimes County love it, and the police units in Navasota come across clear as day on handhelds in P25 mode, where as in analog mode, handhelds are really scratchy at best. The only shame about digital that they acknowledge is that there aren't enough radios to go full time digital! I guess to me, the question is what are the drawbacks to APCO P25. If that were the case, then cost and interoperability with analog agencies would be the biggest.

Hmm, I don't know. I think that is more a factor of the
system setup than the mere fact that the audio is digital.
Sure, occasionally you get "pixelized" voice, but with
analog you occasionally get static or mixed signals.

I do know, that after living in SD for awhile, where 99% of
all public safety is on the state system (yes it is a Moto
Type II, but all digital audio) it certainly made listening
pretty even. I mean all signals were clear, if you could
hear them, then you heard them, if you couldn't they just
were not there. I would imagine if we don't have to deal
with simulcast issues (and your information would tend to
be encouraging in that regard) most people will find it
much easier to listen to than the current systems in place.
Of course, I am not factoring in the wallet pain that will
be caused by any switch, but since I had that pain already
I have recovered somewhat. 8^)

By audio quality, I'm referring to the IMBE sound vs. an analog FM sound. Yes ... the mobile radios sound better - but they sound better on analog compared to a consumer grade scanner, too.

For interoperability with analog - that's more of a training and configuration issue. Every P25 capable radio I can think of does both analog and digital. Turn a knob and you're talking on another agency's analog channel. The biggest drawback is cost. P25 hasn't quite reached critical mass so it's still more expensive than older analog formats - but at least there are choices of vendors.

I have a hunch that the radio spectrum in SD is much cleaner than the metro Houston area.

What I meant by interoperability with non digital agencies encompasses a few things:
A - The dispatchers here sometimes turn down the fire channels so that they don't have to listen to the non emergency traffic of fire personnel. When we need them, or need to talk to a deputy, we have to sometimes switch to the SO channel. If they were full time P25, we would be SOL. Not every volunteer has 1500 to shell out for an XTS5000.
B - Surrounding counties without P25 VHF radios cannot come to our channel for assistance if our SO is full time P25. Many of these small counties away from the metro areas regularly switch primaries to talk to each other, or help each other out since each county may have only two deputies and a trooper on at night. Sure, we could switch over to their channel and solve that problem using our dual mode radios, but then our dispatch would be in the dark if the incident requiring interops was in our jurisdiction.

Nonetheless, I think P25 will just be the norm before long until the next big thing comes along. Just take a look at the FCC database. A new P25 repeater license pops up every couple of weeks in Texas.

Nothing new, and since I was sitting next to the scanner at the time, I probably would have missed it, too. And, since I don't have the software to constantly monitor the system, I'll just have to wait for another catch, and I'm not a fisherman.

I used to be able to pick up their VHF system from 290 and the
Beltway year round on a scanner with an 800MHz RS antenna. I wonder
why their system wouldn't work on 45?

Have they fully switched to STAR-Net now? When I went through Walker
County yesterday, their VHF system was scratchy and I didn't hear
anything on STAR-Net.

considering Huntsville PD is still VHF w/o 800 radios, I would imagine comms are just the same as when I moved away a year ago, with the system serving more as a back channel connected to dispatch. HPD and WCSO monitor each other and assist frequently.

They are using 800 and VHF.
These are the tgs I've gotten so far

23600 Dispatch
57904 Tac 2

I'm in the willis area and I can hear the 800 system if I point the
beam ant in the north direction.
I can also hear the VHF system very well on a handheld.

# 11145. Re: STARNet and APCO-25

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-20 07:30:33 UTC
From: Louis Maag
Topic: 11029  Message: 11145

Well, since I was busy all weekend at the HLSR I am just
now catching up on scanner related items.

It seems as if the radio tech guys got busy on Friday
afternoon doing a little testing on the system. Between
1:15 & 1:25, there was activity on two talk groups using
three different radios.

Two TG's active: 1 & 2
Three Radios active: 101, 105, & 1002
Only one frequency was used (other than CC): 856.2375
(It was used for both voice and data transmissions.)

I will continue to let the Pro96Com run.

From: navscanmaster@aol.com
Topic: 5461  Message: 11151

Conventional it is 154.280 mainly. 154.265 and 154.295 are the secondary fire mutual aid freqs. STARNET has a couple of mutual aid channels that can be used for participating fire departments, Fort Bend county has a dedicated one. But most of the time when you hear "fire mutual aid" or "statewide mutual aid" they are referring to 154.280. It is used when more than one fire department fight grass fires, or respond to any other type of large multi-agency event. Also, air medical helicopters use it a lot as a ground contact channel.

True, but I didn't think that they would come to BTGH on a run. It's
a bit far from their normal territories.

I remember the Pasadena Politics from recent years, and I couldn't
recall who finally got the contract to operate in Pasadena.

Thanx for the refresher....

From: scanfan02
Topic: 5461  Message: 11158

It is also referred to as VHF fire mutual aid, VHF mutual aid and in Montgomery, Waller, Washington and those surrounding counties out west, it is referred to as channel 4(154.280).

Over the past few weeks, I have not been any dispatch tones for SoHo
FD or EMS on StarNet, but starting last night I have heard several
of the dispatch tones along with what i think was a tone test.
Just keepin y'all updated.

Niko

# 11168. Any area Digital groups?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-23 02:32:00 UTC
From: Brooke_Sahm
Topic: 11168  Message: 11168

Now that I have decided to settle in the Woodlands, (our offer on a home was accepted today), it looks like I will need a new Scanner.

So should I replace my old Pro-90 with a Pro 96 or Pro 97?

Basically it comes down to, will I need a digital scanner for anything in the Houston area, or can I get by with upgrading to an EDACS capable scanner?

Thanks All

>Also With the input and output repeater freqs and tone listed I can hit a
>repeater but, I am not sure who it belongs to.

I can see how you might have mistakenly keyed a transmitter on the input and happened to hear the squelch tail on the output frequency. Bet you felt really bad after that and hoped you hadn't done it.

But seriously, folks, you shouldn't be transmitting on frequencies you are not licensed for, ham license or not. Hams especially should know better. I for one have had to deal with bootleggers on 10 meters, 2 meters, and 440 in the past, so I know how it feels to deal with interference in a band I am licensed for against folks who get on without a license to either cause malicious interference or just talk to their other unlicensed buddies.

This practice is not condoned and I don't want folks on the list thinking this is an appropriate way to confirm repeaters.
Even kerchunking ham repeaters to verify them or their PL tones is illegal if you don't identify your station callsign.

Stick to the legal means of confirming things and don't jeopardize your license or ham radio's integrity.

Not too much P25 here yet; however, it appears that the local
STARNet people may be playing with it just a little. A
9600kbs P25 CC was found a couple of weeks ago and although
there has been very little testing going on some traffic has
been caught on it so far. Other than some Federal P25 there
isn't much else, but the state DPS is moving in that
direction. If the budget allows, I would go for a digital
scanner. I would not disregard the newer Uniden models,
I have a BCD396T and really like for the Houston area as
I can put a lot more in it than my Pro-96 or my BC796D.
Don't get rid of the Pro-90 though, I still use mine here
for conventional scanning and also occasionally use it to
monitor LifeFlight on the STARNet. It does a great job
when monitoring just a few Moto TG's.

Since the Pro-96 only works on APCO digital and not Pro-Voice, I would go with a non digital scanner. Since you live in the Woodlands and Montgomery County has a big EDACs system (which if it does go digital (Pro-Voice), no scanner on the market will be able to track it as of yet).

# 11185. hurricane forecast for 2006

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-26 17:45:55 UTC
From: Myles Barkman
Topic: 11185  Message: 11185

With almost 2 months before hurricane season starts (June 1), the folks at Colorado State University where the infamous Bill Gray has been forecasting hurricane seasons for over 20 years have come out with their forecast from data collected through December '05.
They call for significantly less activity than 2005, *but* still about twice as much as a typical season.
17 named tropical storms
9 hurricanes
5 major hurricanes

So they won't get into the Greek letters this year but a typical season only has about 10 named tropical storms (up to letter J).

Gray has stepped aside at the end of last year's season putting his #2 at command.
The folks at CSU will revise the forecast on April 4 and again on May 31.

Check this out about how storms are named. I didn't realize they alternated between women's and men's names.
http://www.nhc.noaa.gov/aboutnames.shtml

Here is the list of retired storm names.
http://www.nhc.noaa.gov/retirednames.shtml
I guess after a meeting of the World Meteorological Organization, they will retire a few more from the 2005 season.

Fry's Electronics, (I-45 at West Road, Exit 59) has started carrying the high-end Uniden Radios at prices slightly mail order. According to their website (www.outpost.com), the 246 is $249 - but keep in mind that the website is a separate entity, and they do not price match. The 396 (which I have) is listing at $579.

From: Brooke
Topic: 11184  Message: 11187

Thanks,

I called Fry's earlier today and they did not have the
246 in stock.

Have you checked the other locations, I-45 and NASA Road 1 (Exit 25, Southeast Houston), and US-59 and Bellfort (Southwest Houston)? I seem to recall seeing the 246 in stock at one of those locations.

Houston Fire Department Shifts Manpower Across City
Plan To Be Implemented In May

POSTED: 11:21 am CST March 23, 2006
UPDATED: 6:06 pm CST March 23, 2006

HOUSTON -- For the first time in more than 20 years, the Houston Fire Department is having to shift manpower throughout the city. The move comes as the department struggles to keep up with the number of calls for help in some of Houston's most embattled neighborhoods, the KPRC Local 2 Troubleshooters reported Thursday.

Like police officers, Houston firefighters are also being stretched thin in certain parts of the city.

"We need to look at what's best for the fire department, what's best for the citizens of Houston and move some of these companies around to try to even out the workload," said Assistant Chief Jack Williams, with the Houston Fire Department.

The fire department is feeling the pinch particularly hard in southwest Houston, which is already one of the highest crime areas of the city. But there are also more multi-alarm fires in that part of town than any other.

"Have you seen your calls for service increase on the southwest side quite a bit?" Troubleshooter Robert Arnold asked.

"Oh, most definitely -- it goes up every year," Williams said.

The fire department's problem -- it does not have enough district chiefs to cover all parts of southwest Houston, which can slow down response times.

So why are district chiefs important? They're like battlefield commanders. They respond to major catastrophes like multi-alarm fires and chemical spills. They're responsible for coordinating all the firefighters, rescue crews and paramedics converging on a scene to make sure that catastrophe is not only contained, but handled safely, Arnold reported.

"Anytime we send a district chief, there's usually five to nine or 10 apparatus rolling with them," Williams said.

But since the fire department does not have the money to add new district chiefs, it's being forced to realign its current manpower so more resources can be devoted to southwest Houston. To do this, the fire department looked at the number of calls for every district in the city.

For example, the chiefs in District 96, which covers Willowbrook Mall, handled a total of 46 calls last year. By contrast the chiefs in District 10, on Corporate near Bellaire, handled 914 calls for service.

"It makes sense that you've got somebody that's making less than 50 and someone making more than 900, that somehow you've got to equal these out," Williams said.

The fire department says another reason this realignment of manpower is necessary is Hurricane Katrina. HFD officials said calls for service increased 8 percent when hundreds of thousand of evacuees relocated to Houston, and a large number of those evacuees settled in southwest Houston.

The fire department has been examining the plan for the past two years and hopes to put it into place by the first of May.

If you have a news tip for the KPRC Local 2 Troubleshooters, drop them an e-mail or call their tipline at (713) 223-TIPS (8477).

The BC785D is discontinued, and as announced will not support rebanding (when that occurs).

If you are not without a scanner right now, I would suggest waiting a month or two until the BCD996T is released. Price wise, it will be similar to the BC796D ($550s) but has a much larger capacity, GPS enablement, multisite support (perfect for StarNET) and much more.

Keep in mind though, other than the StarNET test site, there's no agency currently using a 9600 control channel in the Houston area.

Likewise, I have a BC785D as my do all right now. I am waiting on the BC996T as well. I haven't bought a 796D mainly because all it can do different is track 9600 baud systems, and their are none of any consequence around here. The BC996T just looks too tempting to pass up!

$849.99 is the MSRP, but everyone is saying that it will most likely fall around $575. The site _www.grove-ent.com_ (http://www.grove-ent.com) was advertising it for pre-order for $539.99 I believe, with order being in May or June delivery.

# 11200. trouble with P25 on BC296D

Date: 2006-03-28 23:42:03 UTC
From: Myles Barkman
Topic: 11200  Message: 11200

I may be having trouble getting my P25 to activate on my BC296D now.
Was hearing some activity on 165.5125 and wanted to see if it was in the
clear but it doesn't appear to be working.
I've removed the card and reinstalled it.
I have not done a reset on the scanner since I'm not prepared to reprogram
the whole thing.
Has anyone else had a similar problem with a Bearcat P25 capable scanner?
When I go to Menu-3-0 and then hit 1, it immediately changes to the menu
screen with "Battery Save" highlighted.
When backing back out of the menus, sometimes it will delay and show that
APCO P25 card is installed.
Perhaps it is not really a P25 signal. Sure sounds like it.
I'll try it on the JSC security freq and see if it will at least let me hear
an encrypted signal.

Harris County Communications dispatches Huffman. I couldn't tell you the specific appratus numbers, but all of their box alarm assignments get an automatic mutual aid from HFD E65 and Cypress Creek Medic 592.

Also, their repeater sounds horrible, and oftentimes cuts off the dispatcher midway through a dispatch.

Subject: Re: [HoustonScan] Huffman FD question

Harris County Communications dispatches Huffman. I couldn't tell you the specific appratus numbers, but all of their box alarm assignments get an automatic mutual aid from HFD E65 and Cypress Creek Medic 592.

Also, their repeater sounds horrible, and oftentimes cuts off the dispatcher midway through a dispatch.

On 3/28/06, marvin suggs <msuggs@...> wrote:
Who dispatches for the Huffman FD? And what are their apparatus/unit
numbers?

Thanks,
Marvin

# 11208. Unit ID's in the Woodlands/Montgomery County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-30 15:12:11 UTC
From: Brooke_Sahm
Topic: 11208  Message: 11208

Now that I have my hands on a 246t, I am up and scanning the Woodlands area. I got the last one, a demo unit, at Frys for $199..! Saved $50 bucks for not getting a box.

Here is my question:

Does anyone have a list of how to identify the different patrol units in the Woodlands and Montgomery area. ie. Detectives, sergeants and patrol units. Also how to tell a Sherrifs unit from a Constable? Finally how are medic units assigned.

Thanks again. And for all who want to know; if you have a family, Texas kicks California's tail. I was born and bread a West Coaster but will be happy to never go back again.

"Does anyone have a list of how to identify the different patrol units
in the Woodlands and Montgomery area".
go here for a list of motgomery co TGs
http://home.houston.rr.com/freqzone/freqs/montgomery.html

"how to tell a Sherrifs unit from a Constable"
Sherrifs unit numbers in district 2 are 2000
The constables are 1800 units
the city of Montgomery which is in district 1 are 1600 units

From: navscanmaster@aol.com
Topic: 11208  Message: 11210

I have heard most of the constables identified as 8100-8500, with the second number being their precinct, which are 1-5. I think the sheriff deputies are 1000-6000, with the first number being their district. I have never heard a 6000 number, so they may use the 2000 series since district 6 is surrounded by district 2. And DPS units in MC are 2510's and 2520's.
And I know you didn't ask about the fire units, but I feel like typing anyhow. They are all numbered by department, from 1-18, without a dept. 13. Conroe is numbered single digits on apparatus as dept. 1, but after that, they are all two digit or three digit apparatus numbers. Example, Montgomery is dept. 5, so trucks are engine 51-55, and Magnolia is dept. 18, so they have engine 181-186.

# 11212. Re: [HoustonScan] Unit ID's in the Woodlands/Montgomery County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-03-30 23:22:49 UTC
From: John H
Topic: 11208  Message: 11212

As someone who worked as both a FF and Medic in Montgomery Co. I know this stuff like the back of my hand. The MCHD-EMS units are as follows:

Medic units 1-18 are what they call "post trucks". They fill in for the units that are on calls. They run out of Station 1. It is across from Conroe Medical Ctr. It is also EMS HQ.

The "TC" trucks are transfer units also out of Sta. 1.

Medic 19 - Montgomery

Medic 21 - Willis

Squad 25 - Bentwater

Medic 31 and 32 - Conroe

Medic 38 - Magnolia Bend off FM 1314

Medic 41 - Grangerland

Squad 42 - Cut n Shoot

Medic 52 - Splendora

Medic 60 - Back of Woodlands off Woodlands Pkwy and Branch Crossing

Medic 62 - Magnolia

Medic 72 - 242/I-45 area

Medic 82 - Woodlands(Research and Gosling)

Medic 83 - Woodlands/South County(Sawdust and Budde)

Medic 87 - Woodlands(Bay Branch and Cochran's Crossing) This was my old station.

Medic 90 - Porter

District 1-4 are EMS Supervisors. They normally respond to critical incidents, and also consult on different cases over the radio, normally on "Med 1"

MD-1 is the Medical Director(which happens to be the best in the Country IMHO)

Fire Depts are designated as follows:

Dept. 1 - Conroe

Dept. 2 - Cut N Shoot

Dept. 3 - Lake Conroe(Pine Lake Rd. East to the San Jac River)

Dept. 4 - Grangerland

Dept. 5 - Montgomery(My old Dept.)

Dept. 6 - Needham(242 east of 45 to San Jac River)

Dept. 7 - Bennette(FM 1314 south of 242

Dept. 9 - North Montgomery County(Willis. You can't miss their baby blue fire trucks)

Dept. 10 - Woodlands(Although you rarely hear them dispatched like that due having their own Disp.)

Dept. 11 - South Montgomery County

Dept. 12 - Porter

Dept. 13 - Fire Marshals Office(also referred to as "1300 units")

Dept. 14 - Timberlakes

Dept. 15 - New Caney

Dept. 16 Splendora

Dept. 17 - River Plantation(also FM 1314 north of 242 to the Conroe City Limits)

Dept. 18 - Magnolia

The Fire Chief for each dept. has a Radio number that is the number of the Dept.(i.e. #5 is the Chief of Montgomery)

Assistant Chiefs are designated like this: 501 and 502 are Asst. Chiefs for Montgomery.

Hope this helps.

MR's are Medical Responder units. Typically pickups or SUVs that respond with EMS.

Leslie,

I had not noticed it before (I don't do a lot of air band
monitoring) but did tune it in and it was there. Pretty
noisy here at Dairy Ashford / Memorial area. (West Houston)

Thanks for the replies y'all.
I will have to check if it is on in the morning. I hear it during the day, afternoon and evenings. It is constant and does not vary in strength or rhythm. It started sometime this last week, maybe even the weekend of the March 25 - 26.

Best regards
Leslie

The Cypress Creek Comm center just renamed the FIRE and TAC channels to COMM channels. All associated channel numbers remain the same, just all called COMM now.
There will be COMM 12-14 as well to be determined.

From: Myles Barkman
Topic: 11218  Message: 11230

That's a pretty distinctive sound and one that is easily identifiable.
Sorry, it's not the sound of some military data mode or voice scrambling.

It's the sound of an AM mode video carrier (old school analog station, not the new fangled digital).
If you tuned around to some of the local TV stations, you would probably be able to identify which station you are picking up by the changes in picture brightness, colors, etc.
The scanner is picking up an image (not to be confused with picture image) of the TV station.
That's why I can't hear it on my scanner.
I pick up video carriers on VHF on my BC296 around the 225/610 area. Don't know why I get them right around there.
Whether you receive them or not can depend on several factors including model of scanner, proximity to the TV station transmitter, possibly other strong signals in area causing a mixing of signals, what band you are listening in, etc.
My Pro-2004 rejects a lot of that kind of interference across the board.
My BC-780 gets a lot of interference when I hook up my base antenna and it's worse in certain bands.
It is not a choice scanner for listening to the Mil Air band like the 2004 is.
Listen to 211 or 212 MHz in AM mode and you should hear the same kind of signal. That is in Channel 13's band space.
The actual video carrier center is at 211.250 MHz. The audio is at 215.750 MHz. You need to listen in wideband FM to hear it clearly.

OK, that info is not quite right. Seems there are some changes with
repeaters and tones.
Will try to get in here later with an update tomorrow or next day.
Got all 14 channels anyway.

To answer the original question for now, COMM 6 should be 453.825 with DPL
of 606.
This is one of the new ones.

# 11238. Some STAR-NET Notes

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-04-04 16:01:30 UTC
From: Rob Camper
Topic: 11238  Message: 11238

First off: LARRY ORR HAS RETIRED FROM HARRIS COUNTY!!!

Next due to The City of Houston Aviation department pulling back their channels from the Harris County System, HC is going to be moving three of its north channels to League City and GC will be moving three of its channels to League City. This has delayed several agencies from going onto the Star-Net. The City of Friendswood PD is tenativly set to move to the Star net System some time in May. The FD is still waffeling on wheather to make the move. They have some blow-hard inside the department filling them full of BS about how wonderful Star-Net is. FD will likely stay VHF as will the EMS. The City of Webster has been having difficulties with system. Namely their primary site (ALVIN) has been going into site trunking, this would probably be caused by loss of the T1 to the county that provides the talkpaths and clocking to the remote site.

West Harris County Fire Depts have had their fill of HC and are jumping off left and right. Recently at TAMU Field Day. Several of the dept chiefs said that they are going back to VHF or UHF or have all ready completed the task. Pasadena also indicated that several of the stations were still using VHF due to the lack of coverage of the 800 system. I would guess that the stations would be far east and south like Taylor Lake Village since they lost their patch into the League City System.

From: bpckty1
Topic: 11247  Message: 11249

Did you enjoy the grand tour of North Houston?
It was fun listening to 170.725. Were they testing which radio
to use, the Spectra or the Astro Plus, or, was it just a test of
the radios they already have?

When they discussed going to different channels, was that going to
different frequencies, or, is using different NAC codes sufficient to
have different channels while using the same frequencies?

From what I gathered, they were testing the radios they already had.
When they changed channels, they went to either L1 (170.725), L2
(171.4375) or A7 (FBI channel 173.100 I believe).

From: Myles Barkman
Topic: 11223  Message: 11253

Problem with that was in the old channel lineup, several departments each had their own Channel 12 and they were different.
Spring had their own, NEFR was on the same repeater with different PL and then Klein had a whole different repeater.
Don't know if those will still be carried over and put in radios after the standard lineup. Keep a listen to them to see if they are still being used.

The lineup now is:
192.8 453.125/458.125 *FIRE Cypress Creek VFD-COMM 1 Cypress Creek EMS Dispatch
192.8 453.375/458.375 *FIRE Cypress Creek VFD-COMM 2 Central Dispatch (Klein, Champions)
141.3 453.300/458.300 *FIRE Cypress Creek VFD-COMM 3 West Dispatch (Cypress Creek-linked to 33.780)
114.8 453.100/458.100 *FIRE Cypress Creek VFD-COMM 4 East Dispatch (Ponderosa,Spring, Northeast)-link 154.205
192.8 453.4625/458.4625*FIRE Cypress Creek VFD-COMM 5 Little York VFD (link 33.640 MHz)
606 453.825/458.825 *FIRE Cypress Creek VFD-COMM 6 Ponderosa TAC
88.5 453.750/458.750 *FIRE Cypress Creek VFD-COMM 7 Central Klein TAC (licensed to Klein FD-HCESD #16)
311 453.800/458.800 *FIRE Cypress Creek VFD-COMM 8 Champions TAC
432 453.025/458.025 *FIRE Cypress Creek VFD-COMM 9 CCVFD West TAC
225.7 461.900/466.900 *FIRE Cypress Creek VFD-COMM 10 Northeast (for Spring)-tower N of Spring
94.8 452.350/457.350 *FIRE Cypress Creek VFD-COMM 11 Northwest Klein TAC
192.8 452.225/457.225 *FIRE Cypress Creek VFD-COMM 12 Northeast TAC
532 451.425/456.425 *FIRE Cypress Creek VFD-COMM 13 CCVFD West TAC 2
226 453.8625/458.8625 FIRE Cypress Creek VFD-COMM 14 Little York VFD TAC (still using PL 192.8 for now)
192.8 458.075 FM 1960 Fireground 1
192.8 458.0625 FM 1960 Fireground 2

Radios are also programmed to operate in simplex mode on the repeater outputs if the user elects to do that.
This all went into effect 3/25/06

These are the old channels that are no longer used:
311 451.975/456.975 xFIRE Cypress Creek VFD-was TAC 8 Central (for Champions area)
118.8 451.425/456.425 xFIRE Cypress Creek VFD-was TAC 9 West
94.8 452.500/457.500 xFIRE Cypress Creek VFD-was TAC 11 Northwest (for Klein)

# 11254. [HoustonScan] Cypress Creek Comm Center

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-04-06 22:24:46 UTC
From: Myles Barkman
Topic: 11254  Message: 11254

Already have to make a correction to that list.
Only change is that the COMM 10 repeater on 461.900 now uses DPL of 703.

# 11255. League City Star-Net Site Application shows 7 new freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-04-07 08:24:43 UTC
From: navscanmaster@aol.com
Topic: 11255  Message: 11255

Under application number 0002561808, Harris County now applying for League City site with following frequencies:
866.1625
866.4375
867.7125
867.9000
868.3750
868.6000
868.7500
Guess that means the time has almost come for League City....too bad I am too far away up here in Navasota to listen.

# 11256. Montgomery County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-04-07 06:08:28 UTC
From: Dominick
Topic: 22  Message: 11256

has any thing changed with Montgomery County radio system?
Because when I went to Conroe last week on my pro 97 it would scan and stop on the trunk freq. (example: 265 MCHD EMS-1) and no sound, but when it stops on (example: 155.325 MHz MCHD EMS-1) you can hear it.

# 11257. Re: [HoustonScan] League City Star-Net Site Application shows 7 new freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-04-07 10:02:36 UTC
From: Myles Barkman
Topic: 11255  Message: 11257

Several of these freqs are presently in use for the Galveston STAR-Net site
and some used to be used at Alvin. Some are used by the Galveston County
trunk which is being phased into STAR-Net as well.
So looks like some realignment of frequencies is going on down there.
I believe they are going to keep their original 856.9875-860.9875 freqs as
well and use 856.9875 and 857.9875 as the two control channels.

Topic: 11255  Message: 11258

So after League City and Galveston County merge, I guess Starnet will have absorbed everything in the Greater Houston area minus Montgomery County. Do any of you down in the Houston area actually know if the administrators have any real plans to spread to Austin, Colorado, Matagorda, and Wharton counties? I have always heard that eventually STARNET will encompass the entire Houston area council of governments. And I known that Austin County has explored upgrading to a TRS in the recent past.

Harris County has sites planned in Columbus, and at DPS Pierce for sure. I have even hear talks of tieing into to the Travis County/City of Austin system to expand from a regional to a multiregion system. This would be huge for the state giving them a direct pipe for EOC and City/County government to be able to communicate in times of emergency.

**ding dong the ORR is gone**

I guess those sites are strategic for travel outside of Harris County toward other metro areas. However, building out coverage sites to fill in those counties probably wouldn't happen unless the county wanted to tie in. Oh well, I guess if I want to open this can of worms any further, I need to start it as a new topic. I'm out for now.

And, for example, it will also help the Sheriff's Transportation Division, since they can stay in radio, instead of cell phone, contact with their base as they make/pick up deliveries around the state.

Actual address is 710 Jana Lane at Greenshadow.
This is a type IV landfill that takes brush, construction and demolition
waste. Not your typical municipal waste.

That chart is 10 years old now. Doesn't even have the proposed 700 MHz land mobile band indicated.

High Intensity Drug Trafficking Areas - From what I have gathered, they are funded all over the nation. Kind of a grant operated team of federal, local and state law enforcement that investigate and intercept major drug traffickers.

From: Myles Barkman
Topic: 11282  Message: 11282

Just heard an alert II at Bush IAH.
Folks said there was "significant" metal debris on runway 15L and to get sweepers to clean it up.
Meanwhile, aircraft returns to airport on 27 with normal landing and has cleared runway.
Didn't ever hear what caused the debris but I theorize a jet turbine failed.

From: Myles Barkman
Topic: 11284  Message: 11285

The National Weather Service has adopted the services of the Saltgrass Linked system to receive reports from the Houston and surrounding areas since they are all linked and the person manning the radio at the weather service need only listen to one frequency to hear any reports.

The local Saltgrass repeaters in the area are:
146.920 houston wb5ugt pl 103.5
147.340 clute wb5ugt pl 103.5
442.225 dickinson wr5gc pl 131.8
442.700 the woodlands wa5air pl 162.2+e
442.725 new waverly wa5air pl 162.2+e
443.825 houston wb5ugt pl 103.5
444.075 katy wb5ugt pl 103.5
444.175 plum grove w5sue pl 162.2
444.425 clute wb5ugt pl 103.5
444.725 galveston wb5ugt pl 103.5

There are several others across the state of Texas and it can even be linked to the internet so that stations all over the world can be heard on it.

During severe weather nets in Houston, the links outside Houston get shut off to minimize interference.

Date: 2006-04-17 22:47:30 UTC
From: Myles Barkman
Topic: 11291  Message: 11291

Media is reporting rolling blackouts in the area. Higher than expected
temps is causing higher than normal electricity usage and ERCOT has asked
Centerpoint to institute rolling blackouts.
"Experts" suggest setting your thermostat at 78 degrees.
Also, don't open your refrigerator/freezer more than necessary (darn).

Areas of town are picked at random except hospitals and nursing homes are
spared.

Besides knocking out traffic control signals, the added problem of heavy
traffic near post offices is creating some havoc in the area.

Apparently, Dallas and Austin were also affected.

Don't know what all this means, but it looks like some problems. Don't know what they deal with on a normal day though.
http://mospublic.ercot.com/ercot/jsp/emergency_notifications.jsp

Here's some real-time load data.
http://mospublic.ercot.com/ercot/jsp/frequency_control.jsp
You have to manually refresh/reload.

Again, too technical for me. Maybe someone has the book "Electrical Power Generation and Distribution for Dummies"?

Perhaps if you have the time, you can read up on this and figure out something.

# 11299. Re: [HoustonScan] Need 3 more frequencies to program into my 20ch scanner

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-04-18 01:44:29 UTC
From: Myles Barkman
Topic: 11295  Message: 11299

He already had 460.225 in there but I agree with the other two.
460.350 Special Ops is a great asset, especially if you travel on the freeways through/around Houston. 450.7125 also with the added bonus of getting other non-traffic related items that might be newsworthy. Typically runs from 5am-7pm.
I don't see 453.550 being very fruitful. I finally gave up on that one. Don't know if anyone uses it anymore although it is probably in HPD, Bellaire, Hedwig Village, Spring Valley PD radios.
Since I'm not in that part of town and don't frequent it, maybe someone else can comment on that one.
It looks like you have a UHF fetish but I recommend a couple of VHF freqs. 123.025 area helicopters use around town to keep tabs on everyone's location and you will often hear the news helicopters chatting, sometimes with HPD copters about a scene they are over or going to. You will also hear the air evac helicopters transitioning across town.

157.050 US Coast Guard working channel. Most of the CG ops occur here, either in the water or in the helos. If anything is going on like a rescue, you will here it on here. They can encrypt also.

Maybe 488.8875 or the other CIMA channels. If you live around the ship channel, this is a must.

Another suggestion is 450.5875. Many media outlets, EOCs, public safety and the weather service monitor this 24/7. The most use it gets is every Monday morning for the weekly test.
In theory, it would be used to keep everyone informed when things hit the fan. I've rarely heard it used even in severe weather events. Don't know how much it got used during Rita since I got out of town. It's just another one of those keep-in-your-pocket freqs since if it ever does get used, something big must be going on.

# 11300. Re: rolling blackouts

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-04-18 01:44:48 UTC
From: bpckty1
Topic: 11291  Message: 11300

My neighborhood "participated" this afternoon.
Fun, Fun, Fun, reprogramming older electronics that don't have
a memory that lasts more than 15 minutes.

Way to take one for the team, Ben. Since you did such a good job and kept
the state's power infrastructure from collapsing, hows about you keep
rolling with the punches and keep those blackouts on your side of town.
Don't think I can explain to my 3 year-old daughter why we have to sit in
the dark and heat and can't watch Dora the Explorer. Maybe I can introduce
her to the magic of scanners and rechargeable batteries.
We do have some nursing homes and lovely Bayshore hospital nearby if it gets
too hot.

Seriously, though. We may be in for one heck of a summer filled with heat,
hurricanes, high pump prices and rolling black outs.
Takes the news off of the exploding petro plants anyway.

Just keep smilin' :)

Centerpoint trunked system can be interesting during
power outages if you have enough batteries.

I'm in Galveston on vaction and found 3 buzzing control channels on
the system:
http://radioreference.com/modules.php?name=RR&ctid=2606
only one of them is the police.. are there more updates as to what
tower covers what talkgroups?
As of today 868.8 is the control channel for Galveston public safety.

Most of the use I've caught is on the Texas City site, from Santa Fe public safety, Seabrook PD, and the odd Harris County talkgroup. AFAIK, Santa Fe is the only Galveston County municipality to have made the switch.. everyone else is still on the "old" 6F2E system. Only use I've caught so far off the new Galveston site is the Harris County radio techs.

Myles,

Despite the rumors, I can be a generous person, and I wouldn't want
you to miss out on all the fun and games. It just wouldn't be right.

Keep your car's tank full and enjoy the charms of the a/c as you tour
the neighborhood and watch as your neighbors discover the great
outdoors.

I heard it when I left work around 4. Had to lock it out of a couple of banks.
Sounds like it finally quit.
That's the most use I've heard on it besides the usual Lifeflight/PHI ground contact usage.
Must have been coming from a pretty tall source to hear it from Houston and Porter.

The Galveston Channels are correct. Just Since last week Galveston FD, PD, and EMS went to a new dispatch center in the new county court house. Since then they have had some major issues. EMS tones are not always working. Dispatch can't hear EMS good but AMb to AMB sounds fine. Fire has to keep the radios on day mode, because they can't tone out an individual station in the middle of the night this sucks. No lights to wake you up and listen to every call that everyone else goes on. I heard it could be up to a month to get all this worked out. I had to lock out 1 control channel on my 785 scanner to get it to work and my radio shack hand held wont pick up any of the normal channels. But it is supposed to be temporary. The truck radios and portables have not been reprogrammed or anything in about 8 months so they haven't changed over yet. Chris

# 11315. 914 MHz

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-04-20 04:14:53 UTC
From: Myles Barkman
Topic: 11315  Message: 11315

The last couple of days, I've gotten a Close Call hit on the Katy under TC
Jester. It comes up as 914 and there is a dead carrier. You can hear it
for about 1/2 a mile or so either side of the bridge.
There is an EZ Tag radio set up there on the bridge licensed as WPHW529.
There are several other 900 MHz freqs licensed from 902-916 MHz.
EZ tag antennas are all over the place but this is the only time I've picked
up a signal like this from one.

From: bpckty1
Topic: 11315  Message: 11316

I've noticed this for the past couple of years. I wasn't certain what the frequencies were used for, but last year, at the Toyota Center parking garage I started getting hits near the exit to the garage. Every time there was a hit, a car left the garage. Apparently, one use of this frequency (range) is used to count cars.

I guess the folks at TAMU's traffic school will soon be out of a job, at least on the Katy Freeway.

;^>

From: Eric
Topic: 11284  Message: 11317

I missed all of the sky warn classes, dangit.
Technically, I took it last year, I guess I don't really need it again
so soon... or is it one of those take it yearly type of things?

Anywho, does anyone know if there are going to be any additional
classes? NWS website listed April 13th in FBC as the last one.. I'm
hoping they'll - for some unknown reason - add another.

-Eric

From: Bob Fazzio
Topic: 11318  Message: 11318

1)- {Scanning}- Can anyone give me their opinion on the new BCD996T that's due to come out in May.. Is it worth the additional investment over the BR330T [or any other unit recommended].. I am disabled and will not travel [except for hurricane evacuation] and was wondering if this NEW unit will be more advantageous in this area. Any and all suggestions appreciated.....
2)- {Ham}- I'm wanting to test for my Teck ticket.. I was licenced originally in 1958 [W2 area] but have since let my licence expire.. I live in the Willis/New Waverly area, and 2 weeks ago contacted via email a club in Conroe through 'AARL' that assists folks with testing & licencing. I never received a reply.. So my question is can anyone recommend a club or person in or around my area that is ' really interested in helping an old disabled Dude get his licence?? .....
As a fairly new member I Enjoy & Appreciate "HOUSTONSCAN" **Its the greatest**

You never know if they might add another one in there at the last minute.
You really don't need to go every year. I do to see if there is anything
new, especially video.
You could probably get by with going every 3 years. I didn't notice
anything new and exciting compared to last year.

I know this is a month late, but what was going on was Houston Police units & Fox chopper were searching for a hispanic male wanted for armed robbery at the Chevron station at the corner of the West Loop(I-610)at Memorial Dr. The guy was on running down Memorial Dr. and then northbound on Silber and was spotted
behind the Jack-in-the-box at Silber and I-10. He then ran into an apartment complex behind the restaurant. He was never found as far as I know. Listening on 460.150 westside freq.

Don't know what the operational frequencies are for the International
Festival (yet) downtown but I do know they are using HT1250-LS radios.
Don't know if they are using an LTR system or just simplex conventional.
They are apparently using 15-16 channels.
There are VHF and UHF versions of this radio too but historically, they have
used UHF after they lost use of the KBR 900 MHz system.
Will report back later today on freqs and channel usage.

http://www.findu.com/cgi-bin/find.cgi?ms*

If you go there, then at the bottom of the page, click show stations on map, you'll get a google map.

Most of these are ambulances and other support vehicles forthe MS-150. Zoom the map out and around to see where things are. They run from HOU to LaGrange today.

The map will not auto-refresh, you have to manually hit refresh.

Yep, you were able to get some of them. Some I never even heard used but here's the complete list.
1 461.0375 d023 Security/Info
2 466.0375 d026 Operations/HQ
3 464.0375 d023 Dispatch/Maint.
4 469.0375 d026 Food & Bev/Propane/Electric
5 461.4375 d023 Markets
6 466.4375 d026 Sponsorship
7 463.4375 d023 Entertainment
8 461.9125 d026 Finance
9 466.9125 d023 Volunteers
10 463.3625 d026 Site Admin
11 468.3625 d023 HIF Staff
12 463.9375 d026 Sister Cities
13 468.9375 d023 Parade
14 464.2375 d026 OPS 1
15 469.2375 d023 OPS 2
16 468.4375 d026 OPS Private

These look to be licensed to Houston 2-way under WPXA360.

Never heard activity on the OPS channels, nor a few of the others.

Also caught the 461.6875 d506 out there but it sounds like a vendor of some sort. It's not programmed in IFest radios. Could be for ice, beer, or water.

Subject: [HoustonScan] Questions on Scan & Ham

1)- {Scanning}- Can anyone give me their opinion on the new BCD996T that's due to come out in May.. Is it worth the additional investment over the BR330T [or any other unit recommended].. I am disabled and will not travel [except for hurricane evacuation] and was wondering if this NEW unit will be more advantageous in this area. Any and all suggestions appreciated.....
2)- {Ham}- I'm wanting to test for my Teck ticket.. I was licenced originally in 1958 [W2 area] but have since let my licence expire.. I live in the Willis/New Waverly area, and 2 weeks ago contacted via email a club in Conroe through 'AARL' that assists folks with testing & licencing. I never received a reply.. So my question is can anyone recommend a club or person in or around my area that is ' really interested in helping an old disabled Dude get his licence?? .....
As a fairly new member I Enjoy & Appreciate "HOUSTONSCAN" **Its the greatest**

Anyone else on the deep SW side monitoring 451.1125? It's APCO25 , but I never get voice, only "LNK" and "DAT" (on a 396) never get "ENC". If I monitor on a non-digital, I can hear the P25 modulation, but the 396 will show "LNK" or "DAT, never "ENC" or "P25". I'll have to try it on my PRO-96 and see what I get. Any ideas?

It was pretty interesting hearing them respond to an engine room explosion that may have been a terrorism attack aboard one of the Naval Ready Reserve ships. Would have been pretty neat to see.

I'm in SW, near Mission Bend. Does anyone know if the Galveston TG's
will be on all sites, or just the TX City/Galv? I can snag downtown,
semi-decently, and Richmond with no problems at all, so... ??

Random Chuck Norris Fact:
Archeologists in India recently uncovered a new dinosaur. It?s
actually many dinosaurs but one is in the middle of all the
others. The one in the middle is believed to have killed the
others with a single roundhouse kick to the face. The
archeologists wanted to call it ChuckNorrisaurs but the Indian
government changed the name to Himotosaurous because it?s simply
not possible for Mr. Norris to be killed.

From: Rob Camper
Topic: 11345  Message: 11345

I find it funny that Channel 11, who uses METRO Traffic for the their traffic feeds, ie Darby Douglas, and the Chopper Frank guy, is now using those horrid KTRH Traffic reporters. The Clear Channel guys do not even go out on the freeways. They have been told by management not to drive due to the gas prices being so high. They lose credibility with me when they say The Katy Freeway is 50 minutes driving in and they just drove it and 10 minutes later the Gulf is 40 minutes in and they just drove it. Most of the time they are parked in their driveway or in the studio giving bogus reports. The Helicopter guy corrected them about 15 times this week when they gave out bad or outdated information in the same report.

Just my luck. They've changed the Texas City STAR-Net site control channel to 868.0625. It's too close to 868.0875, the Alvin control channel for me to use T4Win.
So I'm listening to Alvin now to see what groups are popping up. Should be able to see a fair amount of Galveston area folks on there even though the Texas City site is up higher.
The Alvin site is reporting that site 19, the Galveston Island STAR-Net site is using control channel 868.6625 which has historically been one of the Galveston system 6F2E control channels. Perhaps system 6F2E on the island will become system 19 on STAR-Net.

Everyone uses the drivetime computed by the TranStar AVI system anyway
so what does it matter if they are driving the freeways.

With the camera system most accidents and traffic conditions are
spotted that way with information received from scanners. Just a shame
that one some days there can be as much as three or four miles of
freeway with cameras that do not function.

If you monitor Clear Channel on the scanner you will find they are
being sent to locations with information gathered from the scanner.
The reason they have someone drive to accidents is because they do not
have access to TranStar which is where the cameras are controlled.

Only Metro Traffic and Traffic.com have a physical presence in
TranStar.

Most radio reports are given every 10 to 20 minutes and a lot can
happen within those time frames. Many times something will happen
within minutes of a traffic report and it may be 20 minutes before you
receive the next one. The scanner is still the best resource.

Galv, Ft. Bend, Harris and I believe Walker know are all star-net.
Mont co is Edacs. Star net is going digital in the future. That is
what we have been told down here in Galv Co. Chris

Topic: 11354  Message: 11355

Alief Community VFD is on 453.8375 MHz.
They may still be using STAR-Net talkgroup 11856.

From: Myles Barkman
Topic: 11354  Message: 11361

Had to run this morning so just gave the primary freq.
Other freqs are:
453.1875 and 453.5125. Don't know what channels those are called. Have never confirmed them.
Other talkgroups on STAR-Net are:
11856 Fire-1 (simulcast with 33.52 and 453.8375)
11888 Fire-2
11920 TAC-1
11952 TAC-2
Thought they were getting off of STAR-Net and going to UHF but has not happened yet.

I don't think the talkgroup numbers will have to change. I think they coordinated most agencies talkgroups a long time ago with the possibility that some day they might all be on the same system so there wasn't any overlap in talkgroup numbers. One exception is League City. They were one of the first trunked systems in the area and many of their talkgroup numbers are also being used on STAR-Net so some changes may have to be made when they join in but it's a lot easier to change the number of folks using the League City system than it would have been if they didn't coordinate with Galveston County and had to change all those folks too.

Listening to Alvin site, I've heard the following agencies from the Galveston County system:
Dickinson PD
Galveston PD
Galveston FD
Galveston EMS
GSCO (Dispatch, Marine)
Santa Fe EMS
Texas City ISD
Galveston Co radio shop

# 11366. mystery TV audio

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-01 05:15:09 UTC
From: Myles Barkman
Topic: 11366  Message: 11366

Got a special project for someone who wants to figure out who is using some unusual freqs near downtown to transmit certain TV station's audio on UHF.
452.950 had heard Fox 26 before, was NBC Ch.2 last weekend, was Fox 26 this weekend?
458.4125 had heard Fox 26 before
465.200 was ABC Ch.13 last weekend, was ABC Ch.13 this weekend
465.250 was CBS Ch.11 last weekend, was CBS Ch.11 this weekend
So they don't always appear to be constant in whose audio you hear.
None of these are licensed, but whoever is using them knows that 460.200 and 460.250 would not be interfered with in Houston.
Believe the range is very limited.
I heard them full scale at Dallas and Clay, keymap 493K. Probably only get out as far as the loop if that far.

More of that quest for ya...

460.225, I believe.
Simplex. Unless you're right on top of them (within a couple miles or so (and that's luck)), you would not have heard them. It's still a decent idea to keep it programmed into a mobile/handheld, if you have the space, though. I've been out and about and have caught ops on 8, before.

# 11380. Re: aircraft alert

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-02 22:20:19 UTC
From: gtmustang9814
Topic: 11376  Message: 11380

Can you please record it on audio? I am up in Huntsville. I wish I was
in houston. But Sam Houston State is not done yet.

From: Myles Barkman
Topic: 11376  Message: 11382

I don't have anything readily available to record audio on. Hopefully
someone else can.

# 11383. Re: [HoustonScan] aircraft alert

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-02 22:40:31 UTC
From: Myles Barkman
Topic: 11376  Message: 11383

```
Switching landing on 15 Left. Will fly over North Harris County from
Woodlands area.
Better winds with that runway and longer length.
ETA now 30 minutes.

Just a note. Channel 2 has not broken for commercial in the
last hour. Ch 26 is using Sky 2's video.

of all times for my scanner not to be working. I just have the best luck.
Hope someone is recording this.

# 11393. Re: aircraft alert

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-02 23:27:17 UTC
From: Louis Maag
Topic: 11376  Message: 11393

According to Bush Incident Ops, minimal damage to the runway
will get it cleaned up quickly and as soon as they off load
the plane and get it off the runway, they should go back to
normal ops.

That was an impresive landing and roll out considering there
was missing rubber on the left.

Lou

# 11394. Re: aircraft alert

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-02 23:27:07 UTC
From: Louis Maag
Topic: 11376  Message: 11394

According to Bush Incident Ops, minimal damage to the runway
will get it cleaned up quickly and as soon as they off load
the plane and get it off the runway, they should go back to
normal ops.

That was an impresive landing and roll out considering there
was missing rubber on the left.

Lou

Unless they recently changed, Nacogdoches PD uses 154.770 in p25 digital.

# 11397. postings of the new galveston system

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-04 20:11:38 UTC
From: S.Jones
Topic: 11397  Message: 11397

I am in the process of reprograming all of my scanners to the new System

and would like to know if some one has all of the systems that will be on these tower sites: if so could you please email me privately on them.

Email: sandyj@...

1. Alvin site

2, texas city site

3. galveston site

4 and who will be on the league city site when it is up and running or swtiched over.

and were will the 8th precinct constables be what site as well as the toll way.

5. one more site the pasedena site, who will populate it, when everything is said and done.

I am almost sure that league sity will stay on there system or what is left of it

on what site will Webster show up on? as well! the league city site OR?

and what are they doing about Car to car simplex and back channels.

will the ambulance services stay on there assigned freqs or are they being moved as well? i am sure that they can not or want to change the system from amb to hospital coms. the HAHERN system that has worked so well for all involved with it.

thanks in advance

sandyj@...

# 11398. Re: [HoustonScan] postings of the new galveston system

Yahoo group: HoustonScan (2005 — 2006)

From: navscanmaster@aol.com
Topic: 11397  Message: 11398

Galveston, Pasadena, Alvin, Texas City.....
These are all StarNet now. If the agency you have been following has been on 800 Mhz, whether it be police, sheriff, constable, ems, fire or public works, they will probably show up on any of these towers if they are around Galveston County. The only independent 800 public safety systems left in the Greater Houston area are Montgomery County, HISD, and League City. League City will be absorbed soon, according to all the others on this site.

So basically, look at the StarNet page, either on Myles' Freq Zone, or on Radioreference.com and program in those towers. Agencies that weren't on 800 Mhz, and are still on UHF or VHF will probably continue to use back channels such as 154.950 (car to car) and 155.340 (hahern). Also, if your local PD or FD uses StarNet for primary operations, and also has a conventional UHF or VHF frequency listed, than they might still use it as their back channel. Towns that have Police on 800 Mhz and Fire on VHF conventional usually have one of each radio in their vehicles unless they can get a patch between the two systems.

Finally, as to what tower an individual agency will show up on, it will most likely be the nearest tower to their main area of operation, unless something like a hill blocks much of the signal and they are forced to affiliate with a farther tower that is still in line of sight.

# 11399. Re: [HoustonScan] postings of the new galveston system

Yahoo group: HoustonScan (2005 — 2006)

From: Myles Barkman
Topic: 11397  Message: 11399

Don't forget the City of Houston trunked system. Don't think that will
merge with STAR-Net though.
Talkgroups sure aren't coordinated for such a move.
These are the freqs I hear on the Texas City site:
866.3375
866.5875
866.625
868.0625c(alternate?)
868.300
868.5875c
Another freq that is licensed for this site but has not been heard yet is:
866.125

This site broadcasts that Site 19 (Galveston) is using control channel
868.6625.
Can anyone tell me the freqs that site is using?

I think I can hear a control channel on 868.0625 but I'm getting too much
bleedover from 868.0875 to track it. Think this would have to be coming
from the Texas City tower.
Can someone down that way check it out and report their findings?

Is there nothing transmitting system 6F2E now?

# 11401. severe storms on the way

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-06 06:14:56 UTC
From: Myles Barkman
Topic: 11401  Message: 11401

Been following an area of supercells making their way into Southeast Texas.
These are long-lived storms that started up near Abilene and have made their
way across Coleman, Brownwood, Goldthwaite, Lampasas, Gatesville and Waco.
The storm over Waco looks to be the worst right now.
Some of these storms have produced hail up to baseball and possibly softball
size.
Some reports of 60mph winds too.
From the look of it, these storms now appear to be melting together to form
a squall line which if we had to choose, would be a better position to be in
that a swatch of individual supercells.
So perhaps before noon, we should expect to see a squall line move through
the area.
Still waiting to see when a Severe Thunderstorm watch box will be issued for
our area.
Maybe it will come out in a couple of hours. The current Tornado watch
which extends to just outside College Station ends at 5am.

Confirmed today off the Pasadena site with a Bearcat 780. Haven't heard mention of any "tac" or "back" channels yet.

It appears that EMS is still using 155.625. I haven't heard any fire calls yet to confirm whether or not they're still on 154.13.

# 11404. STARNET in Galveston Co.- I'm so confused

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-07 02:41:16 UTC
From: Cliff
Topic: 11404  Message: 11404

OK- I finally have to use STARNET since Galveston Co. SO and
Dickinson PD have gone there.

I've programmed the Dickinson/Alvin site frequencies in.
I hear plenty of talkgoups, but there's no sign of the old Dickinson
or Galveston County traffic.

After reprogramming using the Texas City site freqs, the story's the
same.

I thought the old talkgroup numbers would be in use on STARNET, but
they don't seem to be.

What am I doing wrong?

From today's RRDB:

16144 3f1 West University Place Public Works Harris County -
West University Place

16160 3f2 La Porte Police Harris County - Other Communities

16176 3f3 West University Place Public Works Harris County -
West University Place

So, has Starnet started using 16-step spacing instead of 32-step
spacing? Is this spacing one of the precursers to going digital?

If I remember correctly, the only reason NOT to use even TG's was if
you planned on using "Priority Monitor", which I know when FT Bend
switched to STAR-Net, they no longer used. So nothing would stop them
from using even and odd TG's now.

# 11409. Codes List: DPS Unit IDs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-07 14:41:35 UTC
From: sandyj
Topic: 11409  Message: 11409

regards
sandyj

Codes List: DPS Unit IDs

---
Most units are 4 digits. The first digit is the region that they are in, 5 for West Texas, 2 for Houston area etc.

The second digit is kind of a subdivision of the first digit, or the region, and tells what regional office you report to. For example, 51xx and 53xx units report to the Lubbock regional office, while 50xx and 52xx units report to the Amarillo regional office. There are also 56xx units which are CVE and report to the Lubbock office, and 58xx which are CVE and report to the Amarillo regional office. Also note that all 51xx units report to the 5110 sergeant and all 531x units report the 5310 sergeant.

The third digit is another level of subdivision that describes your "patrol area" and what sub-regional (drivers license) office you report to. For example, 511x and 531x report to the Lubbock office directly, 512x and 532x report to the Plainview office, and 515x and 535x units report to the Levelland office. These "sub offices" are generally drivers licenses offices in smaller towns and do not have communications centers. If the third digit of your unit number is a 0 then you are some sort of higher-up like a corporal or lieutenant, etc. 5100 is in charge of all region 5A (Lubbock area) operations, etc.

The fourth digit is just a random digit that you are assigned. The only special one is xxx0, which is that particular section's sergeant.

There are also many special unit numbers which do not fit in the above mold:
1xx: Aviation unit. These are non-regional and report directly to the Director.
7xxx: Victims assistance
RNxx where N is your region: Radio techs. R502 is a region 5 tech, etc. Radio techs will also fill in for dispatchers occasionally, so I assuming they have at least a TCLEOSE Basic Telecommunicator certification.
90xx: CLE people like Auto Theft Task Force, Narcotics, etc
90Rx where R is your region: Drivers License people
4Axx: Rangers. I am still uncertain how their designators work; they could be 5Bxx, or any other combination, also.
KRxx where R is your region: K9 units

There are also a bunch of civilians in the 9xxx and 7xxx ranges. I have also recently heard some callsigns like "950" and other three-digit combinations. I am unsure what these are. Pretty much everyone in DPS has a radio callsign; both sworn and civilians.

DPS Communicaitons supervisors have now been assigned an Alpha Character "R" and a three digit number for their unit number. Radio techs are assigned a 3 digit number out of the Headquarters radio number pool. Radio tech's do not routinely work the radio, station supervisors fill in when needed or do not have enough operators to go around.

I'm not quite sure which back channel you are talking about, but most of their operations are on UHF. Check out Myle's list (I don't know if it is updated) and look at all of the COMM/TAC channels, which I believe are the only back channels for CCEMS and all VFDs in its territory (except Huffmann).

Cliff,

I am using control channel 868.8 MHz. I live in League City and it has been doing great for GCSO. I use the control channel only feature so dont know of the other frequencies that may be associated with this site. Maybe someone else could throw in some info. I looked through the Frequency list for Star-Net and could not find this frequency listed for any site.

Glenn

I have several chases on cassette tape that I would like to get copied to CD. Some are long (2 hrs) but not all of them. I don't have the equipment to do it, but if anyone is interested in helping me out they are welcome to copies.

Thanks,
Steve

I'm not sure those are still in use. I live too far away to verify
personally. Need someone with Cypress Creek to tell us.
I don't know of any "back" channels on UHF if they aren't referring to TAC
channels.
There may be back channels programmed in the radios that were not in the
lists publicized.

From: Myles Barkman
Topic: 11404  Message: 11415

From earlier posts, I concluded that the old Galveston County 6F2E system was gone. Since I hear 2318 on 868.5875 I didn't even think of listening to 868.800 or 868.9125.
Now I hear 6F2E still on 868.800 with active talkgroups. So there must be three systems running down there now:
2318 from Galveston using 868.6625
2318 from Texas City using 868.5875
6F2E from Texas City (and possibly simulcast in Galveston) using 868.800

I was down that way last night, and got to do some listening. Here's the deal:

The listed control channels for the Texas City and Galveston Starnet sites are incorrect. Texas City's is on 868.5875. I heard another on 868.6625 that was most likely the Galveston site, but no talkgroups came across it so I was unable to confirm. The "old" 6F2E Galveston County system's control channels are on 868.9125 and 868.8000. While watching the Texas City site, the only talkgroups I saw were Galveston PD (52208), Brazoria SO 1 (23952), and a handful of random Harris County talkgroups. The bulk of the radio traffic, including Texas City PD and fire, Bacliff/San Leon fire, AND Galveston SO/County, was on the 6F2E system. I wasn't able to confirm any of the other area municipalities, so their status is still up in the air.

texas city and galveston freqs, for the new sites

could some one please post the correct frequencies for
both of these sites if what is now posted is incorrect.

As far as i can tell though almost all of galveston is still on
their original frequencies or the old site still.

I have not heardany missing on the old site as far as i can tell
unless they are some of the DVP or encrypted areas may have been moved.

though ii have not heard all of the dickinson TG's lately especialy the FD sites.

as they have been dispatching all ofthe dickinson ambulance runs on the FD sites
yes dickinson now has its own ambulances they have two of them. they run out of
the 517 fire house off of 45.

thank you in advance

The old 6F2E system is using 868.9125 for the control channel now. So they must just be using 868.800 and 868.9125.
I tried running T4Win today but it crashed at some point and I had to restart again now.
For the brief time it's been running, I see GCSO Primaries, Kemah PD, Dickinson PD, Texas City PD, La Marque PD, and Galveston PD using the system. If Galveston is truly switched over to the STAR-Net system, the activity I see could just be indicative of some patch to the old system for the "just in cases" of folks that could have been missed in the switchover. I strongly suspect this is the case now that I notice that the radio ID number doesn't change during transmissions for each Galveston PD talkgroup. When I see radio IDs change for a particular talkgroup, I know they are still actually on that system.
Of course that also leaves the possibility that one of the IDs you see is from the link and the other is a "left over" still using the old system.

To be honest, I'd halfway expect STAR-Net to re-use equipment and
frequencies.

# 11421. RE: [HoustonScan] Re: STARNET in Galveston Co.- I'm so confused

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-10 01:19:13 UTC
From: Scott Royall
Topic: 11404  Message: 11421
Attachments: 1 described; binary payloads are missing from this source WARC

To be honest, I'd halfway expect STAR-Net to re-use equipment and
frequencies.

Subject: Re: [HoustonScan] Re: STARNET in Galveston Co.- I'm so confused

The old 6F2E system is using 868.9125 for the control channel now. So they
must just be using 868.800 and 868.9125.
I tried running T4Win today but it crashed at some point and I had to
restart again now.
For the brief time it's been running, I see GCSO Primaries, Kemah PD,
Dickinson PD, Texas City PD, La Marque PD, and Galveston PD using the
system. If Galveston is truly switched over to the STAR-Net system, the
activity I see could just be indicative of some patch to the old system for
the "just in cases" of folks that could have been missed in the switchover.
I strongly suspect this is the case now that I notice that the radio ID
number doesn't change during transmissions for each Galveston PD talkgroup.
When I see radio IDs change for a particular talkgroup, I know they are
still actually on that system.
Of course that also leaves the possibility that one of the IDs you see is
from the link and the other is a "left over" still using the old system.

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-10 04:11:15 UTC
From: bpckty1
Topic: 11404  Message: 11422

This resembles the transfer activity when Pasadena's TRS was assimilated.
It was done by agency, not an all at once switch.

# 11423. Re: [HoustonScan] Re: STARNET in Galveston Co.- I'm so confused

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-10 04:58:04 UTC
From: Myles Barkman
Topic: 11404  Message: 11423

That's just what I was thinking earlier. This is the largest system to be transferred to STAR-Net so the old system may be around for awhile to ensure redundancy, interoperability, and to make sure everyone gets switched over.
Currently, I see the old 6F2E system operating on 8 frequencies:
866.8375
866.9625
867.0875
867.3125
867.5625
867.7125
868.800 control
868.9125 control
I'm going to assume they are still simulcasting from the Texas City and the Galveston towers as they always have.
The STAR-Net site 18, also on the Texas City tower is using 7 frequencies that I have logged:
866.125
866.3375
866.5875
866.625
868.0625 secondary control?
868.300
868.5875 primary control

The STAR-Net site 19 in Galveston is lower range and I can't hear it from Pasadena.
All I know is that it is using 868.6625 as it's primary control channel.

I may have to head down there this weekend to gather more info.

MOst of the City of Galveston(EMS,Fire,Police) is on the new system. THey are not broadcasting anything to the old Co system. If a big fire, or incident comes in they can patch us to the old system. Texas city and the remaining services still on the old will be switched over in the next 2 weeks. This is from the radio guys. They are having to program in the new system in the radios and once they get all the services programmed then they switch and the radio guys have to go back and finish the radios by deleting the old county system. It took GFD, GPD, GEMS about 2 weeks for the conversion. Very slow process. Looks like by the end of the month all will be switched over. I don't think they are using the new Star-net galveston or TC site yet. I believe it is all off of Alvin site for now. chris

Oh ya, when the radio's get reprogrammed the second time they
remove all old Gal, Co info from the radio. so once everyone gets
switched it is gone. chris

, and to make sure everyone gets switched over.

Someone up near Bush Airport try these freqs:
WPXC586
857.7875
858.7875
858.8375
These are apparently on a low 58-foot tower putting out 50 watts.
Licensed to ARINC so could be any airline company using.
Doesn't show to be trunked but you never know.

Aeronautical Radio, Inc., Annapolis, MD. Motorola iDEN system for airline ground support use.

ARINC is building out this iDEN network for most major airports. Currently installed at DFW, Boston, and the 3 NYC area airports (there are other airports, I just don't know which they are, I can just confirm the above).

So, not much to hear, other than the iDEN digital carrier.

Mike Jones
Houston

If all of the galveston Groups are going to be on the Alvin site.

Who is/will be on the Texas city site and who will be on the galveston site. which groups/ besides the known Galveston groupings.

it would be nice to know so one does not have to duplicate entering all of the Tgs over and over again as i personaly do not like just running off a control channel and getting random TGS appearing and having no clue as to what they are, or who they belong to. As going through 26 pages of Listings for various groups is tedious as well as non productive.

that is how i basicaly did it when Galveston went 800 to begin with. when no one else had a clue as to what , or who was were and why.

so it would be nice to know to save an awfull lot on unneeded work.

unless some would like to send me a completed program for them in a RAD shack pro- 2053 format using the [proscan93 freeware] program.

I don’t know what scanner you’re using, but it’s a non-issue on a PRO-93 with Win-93. In fact, the Borg enabled me to actually delete my Galveston bank. Yup, I have one bank of STARNet control channels and TG lists, and that’s all it takes people. The nice thing about Win-93 is that it lets you cut-n-paste the Galveston TG lists to the Borg. Bing, bang, boom.

Subject: [HoustonScan] whos on first, whats on second,

If all of the galveston Groups are going to be on the Alvin site.

Who is/will be on the Texas city site and who will be on the galveston

site. which groups/ besides the known Galveston groupings.

it would be nice to know so one does not have to duplicate

entering all of the Tgs over and over again as i personaly

do not like just running off a control channel and getting random

TGS appearing and having no clue as to what they are, or who

they belong to. As going through 26 pages of Listings for various

groups is tedious as well as non productive.

that is how i basicaly did it when Galveston went 800 to begin with.

when no one else had a clue as to what , or who was were and why.

so it would be nice to know to save an awfull lot on unneeded work.

unless some would like to send me a completed program for them

in a RAD shack pro- 2053 format using the [proscan93 freeware] program.

Subject: Re: [HoustonScan] whos on first, whats on second,

Remember, Starnet is a Smartzone system with all users having full roaming capability. Talkgroups can pop up on any site at any time if someone with a radio on that particular talkgroup is in range of a particular tower. Add that to the wacky coverage patterns of the individual sites (the Baytown tower working better in Webster than the Alvin tower, for example), and it's pretty hard sometimes to guess who's going to be where.

Having said that, I would expect Santa Fe to work off the Alvin site most of the time, with
the rest of the county being split between Texas City in the north and Galveston in the south. Given how things work, you'd probably be able to catch GCSO off the downtown site most of the time, along with BCSO, CCSO, and FBSO.

This can actually be a problem on SZ systems. Image six patrol cars -
each transporting someone to the Harris County jail. The radio in each
car is parked on the home agency's standard talkgroup. As they approach
site 1, the radios affiliate with site 1. Their talkgroup audio is now
copied on site 1 - which has just lost 6 channels otherwise normally
usable to folks based under site 1's coverage area. That is a
significant reduction in call capacity - with busy tones and unhappy users.

The folks managing StarNet may need to limit some talkgroups on a
per-site basis or train folks driving in from remote sites to either (1)
turn off their radio or (2) switch to a different talkgroup (like one of
the jail intake / transfers groups).

Hello,

I am Steve Harris, CEO of Picture Reference in Houston. Since 1993, our company has provided photos and video of automobile accidents to safety organizations and automobile manufacturers for safety and crash studies. While we have our own field personnel obtaining material throughout Texas and Florida, we are always looking for more photogs who may want to earn enough to "pay the monthly light bill".

The majority of our crew are dispatched by persons who monitor scanner frequencies. However, those who are "glued" to their scanners simply dispatch themselves to accident scenes. If any of you may be interested in shooting for us part-time, we would welcome your response at prsafetystudies@....

Best Regards,

Steve Harris
Picture Reference

Good catch. I don't know how you have the patience to listen to the Houston system in search mode with all the boring stuff on there unless you lock a lot of it out.
I wonder if this is strictly an HFD talkgroup or if it is something special for this event.
I will keep it programmed for possible future use.
Were you searching the system on purpose to find new talkgroups for this event?

I might have mentioned this before but I've suspected the City of Houston system of having a channel users can use for simplex operation.
I notice that when monitoring the system today that 857.2625 is not being used.
That could simply be that it is reserved for busy times, that the repeater is down or that it is no longer used. It could be that they turned it off so that they can use that frequency for simplex operations without being covered up by the trunk system.
It's all a bunch of guesses but it might be worth entering 857.2625 in conventional mode to see if there is any use of it in simplex mode. You would have to be within a mile or two of any users to hear them probably.

Several years ago, I spoke with a CoH water employee who said they used a simplex channel at the plants. I misplaced the frequency, and he had moved to a position that did not require a radio with a simplex frequency (ah, promotions and the Nextel), and he was not able to come up with the freqency.

This may well be the "missing link".

And, something to justify the radios the HFD received during the Katrina/Rita events last year. I wonder when HFD will get enough in the budget to upgrade their system, even becoming a part of Borgnet.

--- In HoustonScan@yahoogroups.com, "Eric C. Carlson" <ecarlson@...> wrote:
>
> I keep a large number of systems in search mode and lockout identified talkgroups so I can catch the unidentified talkgroups. The talkgroup is at the high end of the range used by this system so that seems to imply it may be a recent addition or even temporary. Importantly, using this talkgroup keeps a 460 MHz tactical channel from being tied up.

Unless they're using someone other than Motorola's radios, you can scratch 808.4875 from the list. No Motorola radio ever made for 800 MHz is capable of operating simplex in the 806-823 portion of the band.

For what it's worth, I have previously confirmed that 857.2625 in use as a trunked voice channel. Good candidates for the simplex channel are the 853.4875 and 808.4875 itinerant frequencies or one of the nationwide 800 MHz tactical channels.

# 11456. Galveston County StarNet and 6F2E

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-14 01:37:06 UTC
From: John Perry
Topic: 11456  Message: 11456

I've been working on my Pro-96 all day and have re-arranged my talkgroups to try and ascertain who is where in relation to StarNet and 6F2E. The file is GALVESTON-COUNTY-TX.p96 for anyone who is interested in taking a look.

# 11457. Re: COH trunk - simplex

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-14 01:46:31 UTC
From: Chris Parris
Topic: 11447  Message: 11457

I actually caught the simplex channel in use years ago - it was
856.9375 MHz. And it was some guys at one of the water treatment
plants. My log doesn't show a PL tone used, but I may just have
forgotten to log it.

At the time, I noticed it was one frequency that was licensed to the
Houston city TRS, but never showed active while watching the system on
Trunker.

I wondered about that. Somewhere, someone said that League City SWAT may have been on 810.9875 but I tried programming it in an MTX-8000 and it wouldn't take.

Unless they're using someone other than Motorola's radios, you can scratch 808.4875 from the list. No Motorola radio ever made for 800 MHz is capable of operating simplex in the 806-823 portion of the band.

For what it's worth, I have previously confirmed that 857.2625 in use as a trunked voice channel. Good candidates for the simplex channel are the 853.4875 and 808.4875 itinerant frequencies or one of the nationwide 800 MHz tactical channels.

That freq was part of the Aviation Department's EDACS system. Since they moved to STAR-Net, the channels are silent and still licensed to City of Houston care of the Aviation Department, whose license doesn't expire until 2014. Doesn't mean the COH can't use them for whatever purpose they want. Might want to plug all those in conventional mode too for any possible use.

# 11460. STAR-Net Galveston & Freeport sites

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-14 04:48:34 UTC
From: Myles Barkman
Topic: 11460  Message: 11460

Had to be down south anyway so I did a little radio snooping.
Start to catch the Galveston STAR-Net Site 19 control channel around the Galveston County line but don't reliably keep it until about Hughes Rd around the 18-mile marker on I-45.
These are the freqs I caught using the system:
866.4375
866.875
868.600
868.6625c

868.2125 is also licensed but I didn't hear it used. Perhaps if the system were busy enough, it would have popped up.
What I noticed was that all I saw using it was City of Galveston agencies.

Then I got off at FM 1764 and headed west seeking any activity from Freeport.
I started picking up a weak control channel on 866.5375 at FM 646 and Hwy 6, keymap 735J.
This is about 31 miles from the tower.
I started being able to track the system reliably on FM 2004 at the Brazoria County line about 26 miles from the tower.
I drove to FM 2917 and turned back around never hearing any activity on the system.
As I headed outbound, I also picked up a control channel on 868.500 and later on 868.8125.
When I got home, I determined these were from the Beaumont/Jefferson County system, more than 80 miles away. Perhaps propagation was good that direction. I'm able to track 868.8125 somewhat at the house with SysId A93A.
I cannot hear Freeport or Galveston.
Anyway, looks like the Galveston site is up and running mostly with city of Galveston and Freeport must still be in the testing stages.
Maybe someone down that way can program the system and report any activity.
It should have coverage from Sweeny to Rosharon, almost to Alvin and probably Jamaica Beach.
The Angleton site is only broadcasting peer info on these sites around it:
Brazoria, Alvin, Pearland, Texas City, Missouri City

So I guess STAR-Net users' radios don't even know about the Freeport system yet.
I could not get the 396 to tell me what site it was. All it will tell me is "STARNET".

the problem with that is the people that transport to the jails are pd and
they have to have the radio on or atleast i thought they did and last i knew
that each agentcy has its own talkgroup so there should be no bleed overs

Thanks,

> to catch GCSO off the downtown site most of the time, along with BCSO,
> CCSO, and FBSO.

This can actually be a problem on SZ systems. Image six patrol cars -
each transporting someone to the Harris County jail. The radio in each
car is parked on the home agency's standard talkgroup. As they approach
site 1, the radios affiliate with site 1. Their talkgroup audio is now
copied on site 1 - which has just lost 6 channels otherwise normally
usable to folks based under site 1's coverage area. That is a
significant reduction in call capacity - with busy tones and unhappy users.

The folks managing StarNet may need to limit some talkgroups on a
per-site basis or train folks driving in from remote sites to either (1)
turn off their radio or (2) switch to a different talkgroup (like one of
the jail intake / transfers groups).

> 868.800 control
> 868.9125 control

Actually, I had all those in my scanner when Galveston Co. and Dickinson "disappeared".

But I may have had the "new" control channels locked out, so I assumed everything had moved to STARNET.

Anyway, thanks for all the help.

Now I'm only semi-confused.

At least I can find out what all those sirens are for again- until the real STARNET move, rebanding, APCO-25, etc, etc.

Ok I spent last night in Galveston and from my experience all of Galv PD,FD,EMS,SO,Constables, and beach patrol were on the the old 6f2eh system operating on 868.9125MHz as the CC.

868.5875 seems to be the new CC for Galveston StarNet but I am not seeing much activity on it, however my 396 is picking it is up as site 18. Just my 2 cents.

Date: 2006-05-15 14:18:13 UTC
From: bpckty1
Topic: 11465  Message: 11465

Yesterday, at the Katy Freeway and the West Beltway, I saw a new police car, with state exempt license plates, marked as energycorridor.com police. It was driven by an HPD officer. Found this info following the PD's name:

energycorridor.org
http://energycorridor.org/public.safety/default.asp

Anyone have any information on this agency? Do they use HPD radios? Do they use another system?

The officer was using an MDT. But, if these cars are being driven by off duty officers, are they (using a private company's vehicle) allowed access to restricted information? Or, is the MDT for the local organization's information?

Found this info following the PD's name:

Are you sure about the exempt plates? It appears to be a private
service, along the lines of a contract patrol by the constables.

Anyone have any information on this agency? Do they use HPD radios?
Do they use another system?

It seems that the officer working it primarily use a cell phone, but I'm
sure there is a radio in the car to talk to the on-duty police units in the area.

The officer was using an MDT. But, if these cars are being driven by
off duty officers, are they (using a private company's vehicle)
allowed access to restricted information? Or, is the MDT for the
local organization's information?
They are not the first extra-job patrol to get mdt's, there was an article
in the Chronicle a year or two ago. If the association that provides the
patrol will buy one they will allow it to access the city system. I'm sure they
use it to check for calls holding in their contracted patrol area and then
handle them. They can also use them to make police reports, cmmunicate with
the dispatches and other units, enter racial profiling data, etc.

Nice extra job. Even though they are peace officers, I was wondering
what their authority is, how much they are authorized to do, etc.,
since this is a second job.

They can do anything off-duty that they can do on-duty with the exception of
transporting a prisoner in a private vehicle.

The car I saw does have the red and blue light bars and are marked
Police on the front and back windows.

As long as it's a police officer driving it that's fine.

Steve

I don't know of any legal definiation of "a cop car." I would be willing
to bet that the company has some significant restrictions on what it allows
them to do in the cars though. The Public Works dept bought a couple marked
HPD cars (Explorers actually) for the xjob officers who patrol the water
plants to use. They have pretty strict rules on them too....

# 11474. Updated Houston P95 file request

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-16 12:28:07 UTC
From: rnoggin666
Topic: 11474  Message: 11474

Hi Guys,

Well normally I am a passive member here and don't post much but I
do
read and follow the forum happenings. I recently had to send my RS95
in
for repair and when it came back it was completely clean. When it
did
get back I remembered that a while back I had an HD crash and forgot
I
lost all my scanner software. I retrieved my scanner software but
could not locate a P95 Houston area file. I did look on the site
files
area but I did not see a posted .p95 file and was just wondering if
anyone on the site might have an updated .p95 Houston file or might
be
able to read their's off of their scanner and post it. Maybe someone
can tell me where to find one or maybe how to make one out of the
TXT
or HTM files I have found posted on the site. I saw a new .p96 file
from Myles and tried to use the Winxx converter but it would net let
me
convert it to .p95 and said this function was not supported. I am by
no
means an expert in this hobby so any help would be appreciated.

Thanks

Richard

Subject: [HoustonScan] Energy Corridor District

I e-mailed them and this is their response:
"The Energy Corridor District hires off-duty HPD officers to patrol the area. They use the HPD hand held Motorola radios."

Definitely Exempt

In fact, the plate looked like it just came out of the box.

Not every cop car is a "cop car". Unmarked units and jail transport vehicles are "cop cars", but there are limitations on what they are allowed to do.

I guess the correct terminology for what I saw is that the car was configured as an emergency vehicle.

It's a management district established by the state legislature, not a
community association.

The exempt plates I don't understand, but they must have a special deal
worked out to use the radios since we don't have take-home radios. We are very
short of radios, when the hurricane came through we had only 1 for each car,
which sometimes meant 1 for every 4 officers.

I emailed Clark Martinson and asked him about funding and the authority of their Crime Prevention Patrol. This was his response:

"The Energy Corridor District is funded by an assessment paid by commercial properties within its boundaries.

The District hires off duty HPD police officers to patrol the area. Officers have the same authority when they work for the District as they have when they work for the City of Houston."

Funny you mentioned mud... Police officers are commisioned under the Code of Crimminal Procedures Article 2.12 ....water district and improvement districts can commission their own officers...they don't have hire off duty officers from other agencies... see below

Art. 2.12. Who are peace officers.

The following are peace officers:

(1) sheriffs, their deputies, and those reserve deputies who hold a permanent peace officer license issued under Chapter 1701, Occupations Code;

(2) constables, deputy constables, and those reserve deputy constables who hold a permanent peace officer license issued under Chapter 1701, Occupations Code;

(3) marshals or police officers of an incorporated city, town, or village, and those reserve municipal police officers who hold a permanent peace officer license issued under Chapter 1701, Occupations Code;

(4) rangers and officers commissioned by the Public Safety Commission and the Director of the Department of Public Safety;

(5) investigators of the district attorneys', criminal district attorneys', and county attorneys' offices;

(6) law enforcement agents of the Texas Alcoholic Beverage Commission;

(7) each member of an arson investigating unit commissioned by a city, a county, or the state;

(8) officers commissioned under Section 37.081, Education Code, or Subchapter E, Chapter 51, Education Code;

(9) officers commissioned by the General Services Commission;

(10) law enforcement officers commissioned by the Parks and Wildlife Commission;

(11) airport police officers commissioned by a city with a population of more than 1.18 million that operates an airport that serves commercial air carriers;

(12) airport security personnel commissioned as peace officers by the governing body of any political subdivision of this

state, other than a city described by Subdivision (11), that operates an airport that serves commercial air carriers;

(13) municipal park and recreational patrolmen and security officers;

(14) security officers and investigators commissioned as peace officers by the comptroller;

(15) officers commissioned by a water control and improvement district under Section 49.216, Water Code;

(16) officers commissioned by a board of trustees under Chapter 54, Transportation Code;

(17) investigators commissioned by the Texas State Board of Medical Examiners;

(18) officers commissioned by the board of managers of the Dallas County Hospital District, the Tarrant County Hospital District, or the Bexar County Hospital District under Section 281.057, Health and Safety Code;

(19) county park rangers commissioned under Subchapter E, Chapter 351, Local Government Code;

(20) investigators employed by the Texas Racing Commission;

(21) officers commissioned under Chapter 554, Occupations Code;

(22) officers commissioned by the governing body of a metropolitan rapid transit authority under Section 451.108, Transportation Code, or by a regional transportation authority under Section 452.110, Transportation Code;

(23) investigators commissioned by the attorney general under Section 402.009, Government Code;

(24) security officers and investigators commissioned as peace officers under Chapter 466, Government Code;

(25) an officer employed by the Texas Department of Health under Section 431.2471, Health and Safety Code;

(26) officers appointed by an appellate court under Subchapter F, Chapter 53, Government Code;

(27) officers commissioned by the state fire marshal under Chapter 417, Government Code;

(28) an investigator commissioned by the commissioner of insurance under Article 1.10D, Insurance Code;

(29) apprehension specialists commissioned by the Texas Youth Commission as officers under Section 61.0931, Human Resources Code;

(30) officers appointed by the executive director of the Texas Department of Criminal Justice under Section 493.019, Government Code;

(31) investigators commissioned by the Commission on Law Enforcement Officer Standards and Education under Section 1701.160, Occupations Code;

(32) commission investigators commissioned by the Texas Commission on Private Security under Section 1702.061(f), Occupations Code;

(33) the fire marshal and any officers, inspectors, or investigators commissioned by an emergency services district under Chapter 775, Health and Safety Code; and

(34) officers commissioned by the State Board of Dental Examiners under Section 254.013, Occupations Code, subject to the limitations imposed by that section.

Nice extra job. Even though they are peace officers, I was wondering
what their authority is, how much they are authorized to do, etc.,
since this is a second job.

The car I saw does have the red and blue light bars and are marked
Police on the front and back windows.

Date: 2006-05-16 23:38:30 UTC
From: Eric
Topic: 11465  Message: 11490

That's bullshit. You mean we have to watch out for/be under the thumb
of yet ANOTHER police agency?
It's getting rediculous the amount of agencies that can arrest, ticket,
search, detain, or otherwise harras me:
At my house:
1) TXDoT
2) Ft Bend Co Sherrif
3) Constables (who knows what precinct)
4) Metro PD (and whoever claims they can't is full of it. I was stopped,
detained (on site), searched, and ticketted by a Metro PD on Hwy 6, just
south of Beechnut, last year.)

In the "energy corridor"
1) TXDoT
2) Harris Co Sherrif
3) Constables (Pct whatever, AND doesn't Pct 1 have jurisdiction county
wide, now?)
4) Metro PD
5) Energy Corridor PD
6) Houston PD

I'm sorry... I know peace officers have an important job to do, and I
respect that, and them for doing what they do. But with so damned many
agencies out there, and so damned many officers, it's slowly becoming
draconian, and the changes of running into those few cops who will make
your life a living hell for no other reason than the fact that you drive
a blue toyota (you know what I mean), is dramatically increasing.

...I'm sorry folks. I just needed to vent.

Hello? Is there a brain in your skull? I can't tell for sure since you appear not to read what's been posted repeatedly. These are HPD officers working second jobs, not different cops. It is as if HPD Traffic Division suddenly had a lot more money to work certain area. Period. Same people, just more of them out because businesses are kicking in extra funding.

And no, I don’t know anything about you or your Toyota.

Subject: Re: [HoustonScan] Re: New Police Department? West Houston Area

That's bullshit. You mean we have to watch out for/be under the thumb of yet ANOTHER police agency?
It's getting rediculous the amount of agencies that can arrest, ticket, search, detain, or otherwise harras me:
At my house:
1) TXDoT
2) Ft Bend Co Sherrif
3) Constables (who knows what precinct)
4) Metro PD (and whoever claims they can't is full of it. I was stopped, detained (on site), searched, and ticketted by a Metro PD on Hwy 6, just south of Beechnut, last year.)

In the "energy corridor"
1) TXDoT
2) Harris Co Sherrif
3) Constables (Pct whatever, AND doesn't Pct 1 have jurisdiction county wide, now?)
4) Metro PD
5) Energy Corridor PD
6) Houston PD

I'm sorry... I know peace officers have an important job to do, and I respect that, and them for doing what they do. But with so damned many agencies out there, and so damned many officers, it's slowly becoming draconian, and the changes of running into those few cops who will make your life a living hell for no other reason than the fact that you drive a blue toyota (you know what I mean), is dramatically increasing.

...I'm sorry folks. I just needed to vent.

I doubt that TXDOT can ticket you, or even stop you. They have amber beacons. Unless TXDOT has there own PD, which I've never heard of, unless you mean DPS.

Date: 2006-05-18 06:38:52 UTC
From: Eric
Topic: 11465  Message: 11500

HPD officers, or no, it's still yet another agency. Even though they're
HPD officers that are off duty, that still means they, as well as the ON
DUTY officers can stop me.

Just adds more people who have authority at any given time.
and the toyota was an example.

Another Supposition:

Did it have the annoying (to use a polite word) "Survey Center Position" squawk that can be heard for miles around job sites, usually on 151.625, 154.570, 154.600, 460.500, 460.550, 469.500, 469.550?

There is only one good reason for that noise. It does allow a scannist to have a heads up for possible slowdowns while driving the freeways and entering work zones.

Registration up to date? Check
License current and valid? Check
Inspection up to date? Check
No equipment improperly functioning? Check
Buckle up, drive courteous, obey traffic law, and pay attention? Check

These keep me from being pulled over every day. Doesn't matter who is patrolling.

Topic: 11496  Message: 11505

I've heard data bursts like this on 154.325 which was another old Conroe
fire channel like 154.250. Wonder if it is something from up there.
Pretty weak in Pasadena.
What I noticed that was interesting is that when I listened this morning
after seeing the posts about it, it seemed to be a "courteous" data burst.
You can predict when it is about to transmit, about every 6 seconds.
But if another signal came on, like Baytown, it would wait until the channel
was clear.
That's the way all data transmitters should be that share frequencies with
other users, especially voice users, especially public safety.
That follows the FCC rule that you must listen to the frequency before
transmitting and ensuring you will not interfere with other valid users.

Anyway, can someone up north say whether it could be coming from Conroe? I
suspect it is a SCADA type signal that transmits water tower level info or
other similar local government utility use.

# 11506. Re: [HoustonScan] Re: New Police Department? West Houston Area

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-19 00:16:56 UTC
From: Eric
Topic: 11465  Message: 11506

I wish it did, me. I tend to get pulled over, randomly from time to time. Sometimes it's for as small of an infraction as doing one mile over the limit (yes, I know, still illegal, and I shouldn't expect any leniency in the limit), and I can deal with that. But I've had officers pull me over for the sole purpose of "doing a standard license and insurance check." Seven out of ten times, they'll ask to search my vehicle, too.

Maybe I'm just unlucky, but I've had a tendency to get harassed by various police agencies since I first started driving. Granted, I was driving what was termed "a drug dealer's dream" (4wd jeep cherokee, red), along a supposedly well known drug movement route (1960 between 45 and 59), but still... Being pulled over at least once a week (I was ticked all of one time, and I must have been pulled over around ninety to 100 times in the space of two years), and searched nearly 100% of the time... yeah, I guess I am a bit bitter and pissy when it comes to the police.

I understand what they do, and why they do it, but eventually it just gets to you.

# 11509. Re: [HoustonScan] Re: New Police Department? West Houston Area

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-19 01:39:05 UTC
From: Eric
Topic: 11465  Message: 11509

Oh, they always ask permission to search, first. They can ask without a valid reason, there's nothing preventing that. It's up to you to give permission. I give permission most of the time, but sometimes I just don't want to deal with it, and feel like being a pain. heh.

# 11510. BorgNet Site 21

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-19 02:40:20 UTC
From: Michael W. Jones
Topic: 11510  Message: 11510

I had a chance to stop in Huntsville en-route to Dallas Wednesday. I took along my tapped scanner and laptop with UniTrunker. I can now confirm that Site 21's control channels are on the air, although there were no users associated with it. In the submission to RadioReference, I have labeled it West Walker County (It's not in the city of Huntsville, so I figured the county name was more appropriate)

The remaining frequencies are from the FCC license for the site.

Site 21

Site Description: West Walker County
Site County Location: Walker
Site FCC License: WQBM285
Site Location: 30.69222 N 95.73750 W

856.4875 Primary C/C
857.2375
857.4875 Secondary C/C
858.2375
859.4875

If anyone has a better name/description for it, go for it...

Mike Jones
Houston

# 11511. Waller County EMS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-19 20:17:07 UTC
From: scanfan02
Topic: 11511  Message: 11511

Waller County EMS is now trunked (on STAR-Net) on TG 16096. I will see if they have any back channels and post them as I get them.

What is UniTrunker? I am guessing it is a type of software to listen to trunk systems on a computer. Could you explain it and where I might be able to get a copy?

A "hash" sound would seem more like DVP mode. P25 sounds more like a
buzzing sound.
Much of the state has gone to P25 for DPS. Some areas like DFW and Houston
are still analog.
Not sure who else still is.

# 11515. RE: [HoustonScan] Re: BorgNet Site 21

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-20 04:18:17 UTC
From: Michael W. Jones
Topic: 11510  Message: 11515

Unitrunker is an application that uses a Scanner with a discriminator tap to decode and display information carried in the control channel of a trunked radio system. This can include radios associated with the system, talk groups that are in use, frequencies in use, and other information. Most scanners can retreive talk groups, and some can decode frequencies if the control channel is known, but this will display much more.

It is not something to be looked at by the faint of heart, as most scanners cannot directly pass the information and has to modified to have a discriminator tap, as well as most programs require a data slicer to decode the data.

More information can be viewed via this link:

http://wiki.radioreference.com/index.php/Trunked_Radio_Decoders

Uh, fellas, went through Walker County right past the tower. 159.210 PL: 151.4 was active for DPS, but no Starnet on any of the frequencies at that site. Maybe it was on the air, but as of 1230 am Saturday, it was not. However, site 20 was broadcasting loud and clear on 856.2125. Sounds like intermittent testing or something. Anyhow, did get to confirm TGID 57872 as Walker County SO Tactical 1. Deputies were building PC to make a stop in northeast county. TGID 23600 is now Primary operations for SO units, while 155.730 is mostly DPS units in the county.

Interesting that DVP would be on a primary frequency.
I've heard DVP on CLE and EXEC, but this is a new one.
But, Brownsville scanning can be a bit different,
for obvious reasons.

Before, 23600 was reportedly linked to 155.730. Does this mean that they
are no longer linked?
I can hear the Huntsville DPS repeater but it is weak.

Speaking of DPS repeaters, something appears to have changed recently.
The units on the repeater with 107.2 Hz are calling "Houston" and not
"Beaumont".
Are we sure the repeater with 107.2 Hz is still Beaumont or could it have
moved?
KKC588 just IDd on that repeater. I think something has changed.
Need some signal reports from around the area.
It's strong on the discone, don't know about rubber duck yet.

This is another example of an irregular talkgroup for STAR-Net.
Guess they must have allocated all possible talkgroups spaced 32 decimal
from 16 to 65520.
Now they are allocating talkgroups evenly divisible by 32.

# 11524. DPS repeater in Huffman

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-21 04:52:22 UTC
From: Myles Barkman
Topic: 11524  Message: 11524

Picking up the Huffman 159.210 repeater about the same signal strength on the rubber duck as I used to when they were using PL 118.8 Hz. Maybe weaker.
So far, seems I've been hearing DPS units in the Baytown area and into Chambers County.
Only 300' up the 500' tower. Tower belongs to HFD.
Other user is (guess what) STAR-Net, and guess how high up they are?

From: elentz1
Topic: 11524  Message: 11525

When I was in the radio building for the Huffman tower the only things inside are, STARNET repeaters, STARNET failsafe repeater, DPS repeater and one old Motorola Box in the corner. DPS antenna on the south side, STARNET at the top and the other VHF facing north.

Had a list of all the STARNET tower sites but can't locate right now. Remember DPS Pierce, Columbus, and DPS Walker Count for sure.

I originally reported that it was linked when I first heard Site 20 on the air. But I figured out later that it was never linked. 23600 was used for mainly unit to unit conversations though dispatch did have access. Now, most all operations are on STARNET with three known talkgroups.

This was on 0D16. I have not heard any League City talkgroups (that I know
of) appearing on STAR-Net. But then they could be using completely
different talkgroup numbers.
Still sounds like business as usual on the old League City system so far.

Was it on the 0d16 system or one of the Starnet sites? I haven't tried
listening to either since I caught the "announcement" a week or so ago.

Since hurricane season is upon us, my company has thrown it on me to coordinate emergency comms...and one request was for a AM/FM/TV/WX rcvr at our offices...and possibly a scanner including the police bands.. Most of the police around my neck of the woods are SmartZone/Net; either analog or Astro! (My company is on UHF Astro channels too)...Is there a scanner out there with Astro capability and/or Astro trunking? I doubt there is a do-everything box like they want (I havent seen one) but if you know of anything I can get at a reasonable price, I would appreciate any info thrown my way. I can get AMN/FM/TV from RS but this would be a nice time to get a decent scanner to play with (testing of course ;)

Thanks!

I'll give a listen to the channel to see what is on in BMT but the tower that WAS at the DPS office in N Beaumont has been down since Rita...and has not been put back up. There is no other new rptrs on other commerical towers that I have been looked at...Where is the callsign licensed to? Did ya check the FCC web site?

Chris, the Uniden BCD396T will get most of that, no TV (but depending on the channel it should get the audio) and no AM broadcast. It will do ASTRO (if you mean APCO-25 and not Moto Old ASTRO) for both trunking and conventional. It will cost you in the neighborhood of $520 but the programming software from Uniden is a free download and it comes with everything you need in the box.

And where have you been?

Did the 120VAC to 12VDC transformer die or is it the scanner?
Wonder why there is no fuse built into the unit.
Do you run it in a vehicle or in the house?

# 11550. large grass fire in Missouri City

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-26 19:54:56 UTC
From: Myles Barkman
Topic: 11550  Message: 11550

Started after noon and going on third hour.
Ops on STAR-Net Missouri City Fire TAC-1 TG 43216.
Texas Forest Service is on scene helping out.
Talking about getting bull dozers from Huntsville and LaGrange to clear out brush.
Got a ring of folks around the fire and about to set backfires to try to kill it.

Might check out TFS freqs in 151 and 159 MHz bands for activity. Also check 154.280 MHz.
Multiple agencies on scene.

While not specifically listing SkyFox, I would try listening to 450.4875 (PL 151.4), as that is the News Desk.

# 11555. Moving...

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-05-27 17:44:56 UTC
From: Eric
Topic: 11555  Message: 11555

Hey folks...
Just wanted to pop in and ask a question.

I'll be moving to Georgia in August (getting married! Whoa!), and I was wondering if anyone had any information on freqs in and around Laurens County, GA (or a county map, so I know the name of all of the freaking counties). Radio Reference had exactly six FM freqs for the county, and one trunking system with no talk groups Idented.

Any help would be appreciated. =)

Thanks!
-Eric

Eric,

We will miss you.

Try DanRollman (on RR) or Mike (b7spectra on RR) who is the
webmaster of ScanAtlanta.

One or both may be able to provide you some info or at
least point you in the right direction.

Lou Maag

According to RadioReference.com, La Porte Police is on 800 MHZ. They probably still have access to the other VHF channels used by Fire and EMS. Myles' list on Freqzone shows La Porte PD and Morgan's Point PD to operate on 155.625 (127.3), however I have seen a posting somewhere showing EMS running on this repeater also. Fire is dispatched on 154.130 (146.2), along with Morgan's Point. The La Porte Fire Ground is probably the 154.325 (146.2) repeater, which is shown as their channel 4.

when u mean site,you mean the control channels for pasadena?

"Josh W." <motorola.otaku@...> wrote: La Porte PD is indeed on Starnet (16160), with no cross-patching on VHF. I get them off the Pasadena site, but I'd imagine they also come across the Baytown site most of the time too. 155.625 is now exclusively EMS. Also, I've never heard the 154.325 frequency used. FD just works their calls on 154.13, including major events.

Congratulations Eric. We'll miss the "fyre-man" around here. If you're driving out to Georgia in August with the windows rolled down - be sure to keep that pony-tail tucked under a hat. We have some mutual friends - most of whom I've lost touch. I only found out recently that Darwin passed away some time ago. If you happen to see Chris & Bear &Jay (and what was the red-head's name "Ally" or something) before leaving - say "hello" for me.

Regards,
Rick

Date: 2006-05-29 07:33:04 UTC
From: Eric
Topic: 11567  Message: 11567

Okay, folks, did some looking around on Myles' list, today, for a couple of frequencies I heard in general scanning, tonight. Searched the list. Couldn't find a way to search RR by freq, so...

(FM) 164.755 - This frequency appears to be simply dead air. Heard nothing but an open carrier.

(FM) 152.120 - This freq sounded like some sort of law enforcement, but I can't be too sure. I only heard the tail end of a main transmission, and someone (I assume dispatcher) acknowledging. After that, ten minutes meritted two smoked cigarettes and a lot of silence.

Any ideas?
Thanks.

Lou,

Oh, I'll be around for another month or so, at least...

Many thanks for the heads-up on who to contact. I found a listing of the area (and a county map) on Mike's site. With a little luck, Dan or Mike either one will know where I can get files of the frequencies. If not, looks like I'll be starting a website providing them. heh.

Thanks again!

Assuming we're talking stationary... Letter head from where? If it's
from ANY company, Give me a company name (heck, make one up), address,
and phone (real), and I'll make you a piece of stationary. This method
has worked for me, who knows how many times. The beautiful thing is
that it's not illegal, as you do not have to have a DBA to represent
yourself as a business, and if you do no business transactions under
that (or any) name, there's nothing to report or file.

heh.. That's how my current web business name got started, back in 1993.
I've been using it for various things ever since, and it finally became
the name of a legitimate business.

Mike, I am unable to program 800 Mhz radios on the Starnet, as it is a "Pay to Play" type system. I also require a letter on department letter head authorizing the transmit function to be enabled.

Heres two to start you off.

Georgia State Patrol. Youll be in the Dublin
District, but will receive GSP Sylvania and Statesboro
from where you'll be. Too bad your not moving just
two counties over, grew up there and have everything
you would need.

GSP's
154.6800 BASE
154.8000 MOBILE

these are for all of Georgia, except the Atlanta area
which youll be very far from.

Frank,

Which county are you talking about? If it's Toombs in question, I'll be spending a fair amount of time there, as my fiance's family lives there. *shrug* Besides, Dublin doesn't appear to have too many deed restrictions and whatnot, so I might be able to run up a fairly decent antenna and pull things in. *shrug*

Many thanks for the freqs!

From: frank leben
Topic: 11555  Message: 11586

Nope, over in Burke County, lived right on the line
of Burke and screven counties, near a little town
called midville. Your going to find most all of
public saftey still on vhf freqs in that area of
georgia.

Glenn

Excuse the frank in the title, this is my junk-mail
account I use for sites that require an email. So if
i get mail with frank in it i know its junk..

# 11588. Galveston Scholes Field freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-06-04 00:30:48 UTC
From: Myles Barkman
Topic: 11588  Message: 11588

This may be old news to some folks but I didn't get the memo.
Scholes International at Galveston (as it is officially called) does not use
123.050 for it's primary comms.
These are the freqs in use there:
120.575 tower
118.625 ground
119.275 AWOS
135.350 clearance

The field is only open from 6am to 6pm so don't expect to hear lots of
activity on there right now.
123.050 is still listed as a Unicom freq there

# 11589. Fw: [dfwscan] BATF channel lineup

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-06-04 20:38:31 UTC
From: Myles Barkman
Topic: 11589  Message: 11589

Got this from the DFWScan group. Might plug these in to see if they are
being used here in the Houston area.

----- Original Message -----

To: "DFWSCAN" <dfwscan@yahoogroups.com>; "FEDCOM" <fedcom@...>
Sent: Thursday, May 25, 2006 6:43 PM
Subject: [dfwscan] BATF channel lineup

Here's the new Astro (P25) channels for here in the DFW area. Enjoy.
Please do not ask where I got it from, but consider it very good...:)

165.28750 FEDERAL BATF NET 1-10
167.16250 FEDERAL BATF SURV TAC 1
170.96250 FEDERAL BATF SURV TAC 2
173.01250 FEDERAL BATF SURV TAC 3
168.35000 FEDERAL BATF SURV TAC 4 MIXED MODE
165.91250 FEDERAL BATF SURV TAC 5
173.88750 FEDERAL BATF SURV TAC 6
170.88750 FEDERAL BATF SURV/WIRE2/RPT 1 CLEAR
172.48750 FEDERAL BATF SURV/WIRE3/RPT 2 CLEAR
164.23750 FEDERAL BATF SURV/WIRE1/RPT 3 CLEAR

NAC Receive common for TAC 1-6 is 653. NET 1-10 NAC
can differ because of multiple repeat sites, but primarily for
our area it's Cedar Hill.

So far, I have confirmed activity on 165.2875, 165.9125,
and today...170.9625, clear and encrypted.

From: Myles Barkman
Topic: 11590  Message: 11591

No, but I'm sure we will be on the lookout now.
Perhaps a trip or two with a counter or close call can figure this one out.
Don't see anything licensed to "Seawolf" so they could be using anything
from cell phones, to Nextels, to any sort of SMR system where they don't
carry the license (trunk system).
They appear to be headquartered in the Highlands.
Since they are under the direction of TxDOT, perhaps they are using some of
their freqs or STAR-Net talkgroups.
They started screening today.
Apparently, the EPA awarded them a contract for security guard services as
well.

From: Myles Barkman
Topic: 517  Message: 11593

Was just playing around with this to see if I could figure out how to work
it without instructions.
I am a guy, you know.
Well, with a little patience waiting for a P25 signal to pop up and a little
tinkering, it does work.
My first test was on Ellington Air National Guard security.
You would not guess what NAC code they are using.
But I'll let you have a crack at it. Rick can't play since I already told
him but I'd like to see who can guess first correctly.
Just remember, it's a three-digit hex number.
I'll give you a hint, no letters are used.

Myles

Not sure if you are asking about Ellington or DPS. Ellington has been digital for awhile now and DPS is maybe 1/2 way there.
The main reason is bandwidth. It takes up less space to send a digital signal. Another advantage is clarity. As long as you have a decent signal, it is a clear signal.
I'm just not convinced that you get the same range though.
Any distortion of the digital signal creates unintelligible gobbledegook. Scanners are more prone to this than a "real" radio but not being able to test a "real" P25 radio myself, I can't say how well it deals with weak signals or interference.

Having the capability of multiple users using different NAC codes is not really an "advantage" since analog already gives you that with CTCSS and DPL, just with many more codes.

Think they should have put a charge where the guy was secured to the tower.
Oh well, they're the experts. Don't think I would want to climb up that
damaged tower either.
The tower they were supposed to take down was hit by an army helicopter last
Thursday morning killing four of it's five passengers.

This was my reply to Wayne's guess. Message appears to have gotten
lost in Yahoo land again. Will probably see it some day later.

You got it! Took me awhile to see the relevance of the number.
Thought
that was pretty clever.
I wonder if they do something similar at other military installations.

Sounding like Galveston Co SO and Galveston PD are still primary or only users of the old Galveston 6F2E system.
GCSO mobiles sound linked when listening to the Texas City site.
I saw Bacliff FD 59312 on the Galveston site while I heard TG 50496 on the Texas City site.
Have not been able to confirm yet if they are the same thing and are linked.
What I hear on 50496 is EMS related and sounds like Galveston EMS.
Now I see Texas City PD 54896 on the Galveston system but not on the Texas City site.
Same for Texas City Fire 2 55216.
Perhaps they have trouble using the Texas City site.
I wish I could hear the STAR-Net Galveston site though to find out who all is using it now and compare it to what is on the old Galveston system.

It looks like they have moved all talk groups from above 57000 to the in-between talkgroups from 49616 to 57000.

Now we have to start trying to re-identify all those users on these new groups.

I've confirmed that 50496 on STAR-Net is linked to 59312 on the Galveston County system.
Some units are on the STAR-Net system and some are on the Galveston system.
This is Bacliff/San Leon FD/EMS.

Sounding like Galveston Co SO and Galveston PD are still primary or only users of the old Galveston 6F2E system.
GCSO mobiles sound linked when listening to the Texas City site.
I saw Bacliff FD 59312 on the Galveston site while I heard TG 50496 on the Texas City site.
Have not been able to confirm yet if they are the same thing and are linked.
What I hear on 50496 is EMS related and sounds like Galveston EMS.
Now I see Texas City PD 54896 on the Galveston system but not on the Texas City site.
Same for Texas City Fire 2 55216.
Perhaps they have trouble using the Texas City site.
I wish I could hear the STAR-Net Galveston site though to find out who all is using it now and compare it to what is on the old Galveston system.

It looks like they have moved all talk groups from above 57000 to the in-between talkgroups from 49616 to 57000.

Now we have to start trying to re-identify all those users on these new groups.

For the past several weeks some moron has been interfering with HPD Westside Dispatch (Ch12). Mostly I notice it on weekends when this AH must be "in his cups". Last night it caused them to move to CityWide (Ch 5). I know he is not local to me as I can't get him on the input but perhaps the rest of us could occasionally listen in and see if you can pick him up on input if you could post a KeyMap reference, I may just do a little TX Hunting if I can get a starting place. He may be mobile but anything is better than nothing. The PD thinks it is a stolen radio, I am not so sure, but it is a real radio as opposed to a modified ham rig.

Steve,

You ask some very good questions. No, fox hunting is definitely not "Hollywood stuff." Hams were doing it 50 years ago. In my youth in Baton Rouge, hams were doing it semi-regularly for fun. That was on 2 meters. Your UHF frequencies actually simplify the technical side of the challenge, because ranges are shorter and antennas can be tiny.

One important point: Someone on this "fox hunting" team needs to both be authorized to transmit on the affected channels, and have the skills necessary to incite and engage the jerk. After all, the length of the hunt is inversely proportional to how much the moron transmits.

Oh, and your "official" radios are somewhat distinctive in the way they sound.

Now, what was the story behind old "Mack"?

Scott

I've been the first for 15 years, and am pretty adept at the second...
Oh, and your “official” radios are somewhat distinctive in the way they sound.
Ours are, mostly because they are so old. My "official radio" is certainly not the only radio I have though. I was just wondering if there was some for-sure way to tell, without putting hands on it, that he wasn't using an opened up ham radio.
Now, what was the story behind old “Mack”?

Mack was an officer who was severely injured in a car wreck on the way to a call many years ago. He was in some sort of care facility for years and on Sundays an officer used to go visit him. One of the rituals was the Mack got to talk on the radio to say hi to his old friends that he used to work with (South Central I think). About the only thing that cheered him up was hearing from them. He died a few years ago.

That's very sad, and much as I suspected. I remember hearing him on many holidays and weekends. He actually was on most of the dispatch channels, and I suppose the idea was to catch those friends who have transferred. RIP, Mack.

I heard this guy about a week ago on Westside. I little far for me to venture out and try to find him. I wasn't able to tell if he was transmitting MDC, but even if he was, and he got a real HPD radio, he must have gotten the charger that went with it.
Regardless, I'd love to have the time to find him. He sounded mobile when I heard him.

I hate to say that you never know if they might even be on this group or know someone that is, so don't say too much about the plans on here.

Exactly my point earlier.

However, unless people attempt to listen on the input side of
the signal and at least get a starting point, this is pretty
useless.

I was a little upset to hear that he appears elsewhere, that
widens out the search area quite a lot, so I guess the thing
to do is to listen and if you hear a guy barking at the K9 units
or suggesting that the female officers meet him somewhere for
a "little fun" stick an additional 5 MHz on the current signal
and see if he is in your area. It is just possible that he picks
on channels far away from him.

Lou

PS: BTW, apparently he doesn't require much "egging on" so
having to transmit to engage him is not so much of a problem.

that's true. Can't the dispatcher tell the radio by the radio number
that it puts out? If so couldn't they discern whether it was one of
theirs or not?

# 11625. HPD "X-Ray" Patrol Units

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-06-18 03:29:45 UTC
From: Eric C. Carlson
Topic: 11625  Message: 11625

I've noticed in the last month or two there are patrol units with unit identifiers ending with "x-ray" (e.g., 1A22X) on Central and possibly other channels. Can anyone advise the significance of the "x-ray" designation?

It's an overtime program... Different stations are using a different
system, but they are usually the NETT program. Can't remember exactly what that
stands for, but it's FEMA funded to address our increased population...

Inputs are on the list. All inputs for UHF band 420-464.975 MHz are +5 MHz.
That means you just add 5 MHz to the repeater output channel (460.150) to
get the input (465.150).

Let me first say that the views in these included articles do not represent
the views of the poster.
Some folks could be offended by what you read. I try to forget that these
sites exist but I included them here for educational purposes since they
included some relevant information.

I went to Google and one of the first sites that told me what NETT was
sounded a little funny in their "wording".
http://www.nationalvanguard.org/story.php?id=7329

Then this explained the close-minded tone of the article.
http://nationalvanguard.org/story.php?id=6678

Here's some more info I found after figuring out what NETT stood for:
http://www.chron.com/disp/story.mpl/front/3549099.html

From: Myles Barkman
Topic: 11633  Message: 11637

The quick answer would be "yes".
BUT, you may not get the best results. As it is designed to be a TV antenna, it is horizontally polarized whereas land mobile comm antennas are vertically polarized. That means you are trying to listen to a signal with an antenna laying flat where the signal is standing up. That looses about half the signal strength there. Also, the top of the frequency range is at the bottom of the 800 MHz land mobile band. That means the capability to receive signals above 810 MHz will quickly diminish. Granted, anything outside and high is better than inside but just know that it will not be optimal.

The best case scenario is a multi-band scanner antenna with low-loss coax rated for high frequencies (ie 800 MHz).
Using something like RG-58 or even long runs of RG-8 is ridiculous for picking up 800 MHz signals. The 75 ohm feedline that comes with the antenna may even loose some signal since it will not match the impedance of the 50 ohm expected at the scanner. I wonder how the built-in amplifier will work out. In the city, you may experience overload from pagers and other strong signals near you. TVs are not prone to receiver overload and amplifiers work fine for that application but scanners are sensitive creatures and that much amplification could over load the receiver-not to the point of damaging the radio but causing it to pick up so much interference from already near-by signals that it renders the radio useless.

You could always try it out and see how it works for you. I see there is a 20% restocking fee if you decide to return it. They say they cannot accept returns of electrical items. Wonder if they consider that electrical. Usually, electrical is more like 120V while electronic is 12V. It all a matter of semantics.
They also mention not returning with signs of installation. I'm sure the connector on the end of the coax is an 'F' connector. So you don't chop it off, go to Radio Shack or your choice of otherwise electronics parts store and find an adapter to go from 'F' female to BNC male. RS part # is 278-277 for $5.29.

Someone else might be able to recommend a better antenna/coax to use.
What kind of installation are you trying to do? Beside a house, RV, ...

From: Myles Barkman
Topic: 11645  Message: 11645

Looks like I'm stuck at home and I have to listen to my scanners until the water goes down.
I have at least 15" of water at my curbline and that is above the tailpipe on my CRV.
I haven't seen the water this high since Allison-and the city (Pasadena) had improved the storm drain system on my street since then, so what would it have been like if they didn't?

HFD doing high water rescues in Bellfort/Telephone, Gulfgate, South Acres/MLK, Holcombe/Almeda, I-10/Federal, etc.

Many folks aren't even up yet to know what's going on.

The VIL product on the radar shows a tremendous amount of rain dumping over the south part of Houston along Airport and Bellfort between 288 east to Telephone.

You can check check this link to see what Harris County OEM rainfall guages are showing.
http://maps.hcoem.org/hcrainfall.php

This link shows the stream level and discharge rate for Sims Bayou. Doesn't look like the gauge is working too well.

More to the point, the FCC is too short-staffed to get involved unless it☐s pitched as a ☐national security☐ problem. HPD isn☐t about to accept ☐outside☐ help from the FCC or hams anyway.

# 11654. Plant fire in Crosby

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-06-21 01:42:15 UTC
From: John H
Topic: 11588  Message: 11654

There is a fire at the Atofina plant on Crosby-Eastgate Rd. near Gatewood. A storage facility containing organic peroxides is on fire. Working on Crosby Primary 151.100. Sounds like they are providing water via tanker shuttle to the Company's response team. Does anyone has Atofina's freqs???

I didn't, but finding the address with the help of Google, then finding out the coordinates, plugging them into the FCC database, resulted in a callsign for Arkema Inc. which is who took over the Atofina plant.
Callsign KD36759
462.8125 467.8125
463.4125 468.4125
463.4375 468.4375
463.7125 468.7125
463.8875 468.8875
463.9125 468.9125

All appear to be simplex, 2W portables

In Houston, Arkema is licensed on 464.950 on a 100' tower near the ship channel south of Cloverleaf.

--- In houstonfd@yahoogroups.com, "lc682001" <lt2@...> wrote:

From the rumor mill, and I emphasize the rumor mill, it is as follows:

24's will possibly be in 21's District given they only have 3 stations currently or 46's District. This also involves the rumor of L46 moving there, D46 moving there, Station 25 going to D08 to balance out the districts, etc. Way too many variables at this point.

84's most likely in 64's District, if it doesn't beome D74.

95's most likely in 71's District because even after 94's opens back up here in a few days they will only have 3 stations in the District.

105' most likely in 102's District.

About 22's, while they have a District 22, it is a Staff Chief position and is not a 24hr District Chief. Same applies to Rescue with District 11. Both also have a Sr. Captain assigned also that assist with coordination of their respective teams. Hunter can clarify or correct as appropriate.

As for the other vacant numbers in the station numbering, who knows. There is also no Station 1, 14 or 24 currently.

And of the station numbers thrown out there, 1 is rumored to be another ARFF station at Bush Intercontinental airport. Just some thoughts.

Larry 68A

P.S.: Hunter, what happened to Rescue 11 the other day? We heard it was on the back of a hook.

# 11661. Methodist Diagnostic Building Implosion

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-06-25 13:09:55 UTC
From: Eric C. Carlson
Topic: 11661  Message: 11661

I got up before dawn to see the Methodist Diagnostic building implosion in the Medical Center. File this one for future reference: Cherry Demolition (Houston-based) operates on 151.625 simplex with DCS 205.

Frequencies in use:
151.625 [d 205] Cherry Demolition - camera setup, blast zone security, final countdown
453.2 [146.2] Rice University Police - handled the perimeter along Main
460.225 [123.0] HPD Ch. 8 - I assume they were handling the street closures on Main and Fannin but I didn't hear much from them

The security talkgroup (0-02-110) on the Methodist Hospital trunked system was also good. There was related talk on the Rice University maintenance channels as well as the other hospital security and maintenance channels.

-Eric

From: jim
Topic: 11666  Message: 11666

OK..what's the deal here? I'm over in Deer Park...monitor Pasadena and DP on a BC 780. Everything was working great over the last few months until recently. For some reason...I'm not picking up (very little) activity on the Pasadena band. When I take it out the 'trunk mode'and hit 'scan'...I get all sorts of activity but can not follow it...when I push the 'trunk mode' back in...all is quiet. I'm missing a lot of stuff out there! Time for a new scanner??? Suggestion/thoughts are appreciated. galvbay

# 11667. 856.4875 P25 trunk

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-06-26 01:55:24 UTC
From: Myles Barkman
Topic: 11667  Message: 11667

Is this P25 trunk system still in Tomball. I wonder if it will move to
Huntsville. Is there a separate analog site running there now.

I heard the P25 variety from College Station last night but then I heard
lots of things from the top of a 6-level parking garage.
I could hear the Site east of Huntsville, Hempstead, Tamina, the Lee County
trunk, Mont Co trunk, several LCRA sites and several Entergy sites.

I see that RadioReference needs some help with the Entergy system.
Here is what I heard with the siteID that my 396 displayed (all system
2D16):
853.2875 0009
855.4125 0017
855.5125 0013
855.5625 0016
855.7875 0011
858.8875 0015
860.3625 0018
860.8625 0003

I didn't try tracking these. I also heard these LCRA control channels. Can
someone verify if these are being used from the following locations?
935.4125 Washington
935.4625 Brenham
936.200 Fieldstore or Halletsville
936.750 Giddings or Flatonia
937.150 Caldwell

Also found the UHF side to 125.150 Houston Center in College Station. It is
288.275 MHz.

From: navscanmaster@aol.com
Topic: 11667  Message: 11669

As far as Entergy goes, I have personally confirmed the following and posted it to RR. I don't have the 396 so I can't identify site numbers:
855.4125 Madisonville
855.5125 Huntsville (855.0875 runs some time as CC)
855.5626 Shiro
858.8875 Navasota
860.3625 Snook (854.9125 used to run full time as CC)

Also, the LCRA CC's you identified are correct, except, I don't think I have heard a Fieldstore Site up and running yet. Most of my listening was done from a top level apartment in Navasota, but I venture into Bryan to play sometimes. I could also track Lee County 50% of nights from that apartment with a RS 800 mhz antenna from inside.

From: jim
Topic: 11666  Message: 11677

Please walk me through this one for me...reading the City of Pasadena and Deer Park list...it shows 12(twelve) freqs...866.1125 866.3625 and so on. I am programing the BC-780 with WinScan780 software. I input the 12 freqs in and then add the different tags...correct? I still think that I'm missing activity because if I turn the 'trunk' selector 'off'...and scan, I hear more activity than usual (can not track it though). When I put the 'trunk' selector on...it does not pick up activity as much. Hope someone can answer this one for me. Jim..

ps....are outside antennas worth the trouble?????

Not until you mentioned it. I don't put the delay on DPS 1/2, so, I
guess I missed it. Nice to be able to hear both sides, now.

Also, it appears that none of the 159.210 repeaters in the Houston area
are not up at this time. All this may be in preparation for the
transition to P25.

HARRIS COUNTY HAD HELICOPTERS BACK IN THE LATE 70 EARLY 80'S . HUGHES 300. REPAIR NIGHTMARE BUT THEY HAD 3. JIM BROCK, SAM RADAR, WERE 2 OF THE PILOTS. CANT REMEMBER THE OTHERS. IN 80 OR 81 COMMISSIONERS SHUT THEM DOWN DUR TO COST. WHEN THEY WERE UP THEY WERE GREAT TOOLS. "86 FOX" . I THINK PASADENA GOT ONE AND HOUSTON THE OTHERS. THEY WERE ON A GRANT SO THEY COULDNT BE SOLD. THEY WERE KEPT AT HOOKS AIRPORT WHERE THE CUSTOMS HANGER IS TODAY. ONLY PROBLEM THEY HAD WAS THAT THEY KEPT KEY MAPS AND WILSON FIRE IN BUSINESS. DONT KNOW HOW MANY KEYMAPS AND EXTINGUISHERS FELL OUT THE DOOR. SOMEWHERE AROUND HERE I STILL HAVE PICS OF THEM, ILL HAVE TO FIND THEM.

If you are looking for a frequency that the Safe Clear Wrecker drivers can use to talk to Transtar the answer is yes, there is one, but I have never even seen the radio turned on when I've been up there. I don't think it's a channel exclusively for that purpose, I think one of the companies just gave them a radio with a company channel. They all call on the phone and hey donated a cell phone to HPD so they can get in touch with someone even when the officer "steps away from their desk."

Effective Mid July, West Harris County EMS and West I-10 FD are going to be dispatched by the Cypress Creek EMS Comm Center, off of FM 1960. I have no idea what 'Comm' Channel they will be called or so forth, but I am pretty sure that is what it is about. The department appears to be getting ready for the switch. Since I work at HCECC, I have heard a little about this.

# 11700. Re: W I-10 Radios

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-06-29 19:46:28 UTC
From: David
Topic: 11689  Message: 11700

West I-10 Fire Department and West Harris County EMS are switching all dispatching services to the Comm Center effective 10am on Saturday July 1st. We have also switched to UHF and will be getting off of Starnet for primary operations. We will be keeping 1 starnet radio on each apparatus for mutual aid calls with surrounding agencies still on Starnet and interoprability. We currently have 3 UHF channels and are expecting to get more in the near future. Here are the freq's.

Comm 20 (Primary Dispatch) - 460.250
Comm 21 (Tac Channel) - 460.200
Comm 22 (Tac Channel) - 461.825

Both agencies will be dispatched off of Comm 20 and may moved to either Comm 21 or 22 for large incidents or multi unit incidents. The Comm Center or the Incident Commander may move the incident to a Tac channel if necessary or requested. If it is a small incident then it will most likely stay on Comm 20.

All of the announcements that have been heard over the past week or so is to issue new radio's to all the members, radio orientation classes and also some additional reprogramming that needed to occur.

We will be following the Comm Center unit structure.

West I-10 Fire Dept
101 - Fire Chief
102 - Asst Chief of Operations
103 - Asst Chief of Administration
104 - Future
105 - Future
106 - PIO
107 - PIO
108 - Communications Officer
109 - Maintenance Officer
District 1 - District Chief 1 (Stations 1, 4 & 5)
District 2 - District Chief 2 (Stations 2 & 3)
Safety 1 - Safety Officer 1
Safety 2 - Safety Officer 2
x11 - Station Captain (ie 111 Sta 1 Captain, 211 Sta 2 Captain, etc)
x13 - Station Lieutenant (ie 113 LT, 213 LT, etc)
x14 - Station Lieutenant (ie 114 LT, 214 LT, etc)
x30-45 - Station Members that have been issued handheld radio's.
All Apparatus will stay the same numbering scheme. (E1, E2, etc)

West Harris County EMS
Amb 1-5 (BLS Units)
Medic 1-5 (ALS Units)
Squad 1-5 (Paramedic responder that will "chase" the BLS units as neccessary)
There members radio numbers are 801-899.
801-805 (Command Staff)
810 - 899 (Members with handheld radios, certain range numbers designate their EMS skill level)

Hope this answers questions anyone may have. If not feel free to contact me.

David Hartley
Station 2 Captain
West I-10 Fire Department

Effective at 1000HRS on July 01, we start the 8 hour conversion to be off of STARNET and on the 400MHz system. Also at that time, COMMCENTER will begin receiving and dispatching our calls for service. We are using COMM 20, 21, and 22. AKA, DISPATCH, TAC1 and TAC2, or 460.2500, 460.2000 and 461.8250, respectively. Fire and EMS will be dispatched on the same channels. More channels will be gained as licenses open up. Rumor has it that Katy FD will be buying our Trade-in 800 equipment so be prepared for that.
Those who are paying attention, have already noticed that officers are using new ID designations and dispatch is not answering our in or out of service calls. This is what CommCenter will be doing so our dispatch center has already started. Fire Apparatus will maintain the same designations.

Best Regards,

Jay Ostertag
Captain, Station 4
West I-10 Fire Department

All of the announcements that have been heard over the past week or so is to issue new radio's to all the members, radio orientation classes and also some additional reprogramming that needed to occur.

We will be following the Comm Center unit structure.

West I-10 Fire Dept
101 - Fire Chief
102 - Asst Chief of Operations
103 - Asst Chief of Administration
104 - Future
105 - Future
106 - PIO
107 - PIO
108 - Communications Officer
109 - Maintenance Officer
District 1 - District Chief 1 (Stations 1, 4 & 5)
District 2 - District Chief 2 (Stations 2 & 3)
Safety 1 - Safety Officer 1

Safety 2 - Safety Officer 2
x11 - Station Captain (ie 111 Sta 1 Captain, 211 Sta 2 Captain, etc)
x13 - Station Lieutenant (ie 113 LT, 213 LT, etc)
x14 - Station Lieutenant (ie 114 LT, 214 LT, etc)
x30-45 - Station Members that have been issued handheld radio's.
All Apparatus will stay the same numbering scheme. (E1, E2, etc)

West Harris County EMS
Amb 1-5 (BLS Units)
Medic 1-5 (ALS Units)
Squad 1-5 (Paramedic responder that will "chase" the BLS units as neccessary)
There members radio numbers are 801-899.
801-805 (Command Staff)
810 - 899 (Members with handheld radios, certain range numbers designate their EMS skill level)

Hope this answers questions anyone may have. If not feel free to contact me.

David Hartley
Station 2 Captain
West I-10 Fire Department

During the testing, one side was garbled and the tech told the
user, "turn off your scrambler." Then both sides of the conversation
could be heard. So, I presume that the big knob surrounding the volume
switch had moved, thus enabling the scrambler. (Assuming, of course,
that they will be using Batwing brand radios similar to the ones I used
to use at work that had the capability, but had the feature disabled.)

Subject: [HoustonScan] Re: W I-10 Radios

Effective at 1000HRS on July 01, we start the 8 hour conversion to be off of STARNET and on the 400MHz system. Also at that time, COMMCENTER will begin receiving and dispatching our calls for service. We are using COMM 20, 21, and 22. AKA, DISPATCH, TAC1 and TAC2, or 460.2500, 460.2000 and 461.8250, respectively. Fire and EMS will be dispatched on the same channels. More channels will be gained as licenses open up. Rumor has it that Katy FD will be buying our Trade-in 800 equipment so be prepared for that.
Those who are paying attention, have already noticed that officers are using new ID designations and dispatch is not answering our in or out of service calls. This is what CommCenter will be doing so our dispatch center has already started. Fire Apparatus will maintain the same designations.

In other words, in case you aren't familiar with LTR systems, they typically will not have two repeaters numbered adjacent to each other. They don't have to fill up all twenty slots with repeaters. Most LTR systems when you get away from the big city are numbered 1,5,9,13,17, or 1,3,5,7,9, or even 2,4,6,8,10. What you see on the Houston Two-Way system is all that is there. When programming it in, just leave those channels blank.

# 11711. 800mhz Trunking Repeater Offsett

I have an update on that note. We got more frequencies approved today and Katy decided not to sell us access to the 460.2. So here is the line up effective now.

COMM 20 - 460.2500 DISPATCH
COMM 21 - 461.8250 TAC 1
COMM 22 - 461.4875 TAC 2
TA - 461.5125 "TALKAROUND" Repeated but not monitored by CC
SUPER - 461.8250 (Different PL) Supervisor Channel

I am not at liberty to publicly release the PLs but if you are like me, you got the equipment to figure them out by yourselves.

At 10AM the W I-10/WHCEMS Dispatcher announced that all functions had been transferred to the Command Center and that they were going off the air.

Been nice knowing ya.

At 10:10AM CC began radio/pager testing w/ W I-10/WHCEMS, WPQS321

Welcome

And, the question remains, will 155.295 remain active as a pager, or will CC be using a different pager/frequency?

So to answer your question... 155.295 will be no longer active for paging. We will most likely keep the frequency for some type of back up usuage. Will let you know if that changes.

We are currently using Kenwood 8180 radio's in all of the apparatus, 3180's issued to all officers and 3170's issued to all fire fighters. The 3180's have a scramble feature that provides a "secure" conversation between 2 users that have enabled the scramble feature. As of now we are not paging on any Minitor pagers but that may change in the near future. If that does change we will most likely page off of UHF and not the VHF 155.295.

# 11724. Re: [HoustonScan] 800mhz Trunking Repeater Offsett

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-07-03 05:35:48 UTC
From: Myles Barkman
Topic: 11711  Message: 11724

Kind of depends on several factors.
Was the guy talking on an HT (3 watts) or mobile radio (10-35 watts)?
What STAR-Net site were you listening to and how far away was it? If you were fairly close to the tower, you wouldn't get much desense.

What kind of scanner were you using (portable or mobile) and what kind of antenna?

Also, keep in mind that repeater offset on 800 MHz is much higher than VHF or UHF. What Ben *meant* to say when he wrote this-
"The mobiles are 45KHz below the repeater."
was that the input is 45 MHz below the repeater transmit frequency.
That's a lot of separation to help not be desensed.

Myles

> >
> > -josh

Josh, and all,

Below are a couple of explanations of repeater operations. If you can still find them at Radio Shacks, get a copy of Police Call. The front section has a very good explanation for novices as to how radio systems work. I also found a short explanation from the Kansas State University Amateur Club. I hope the formatting isn't too bad:

Radio Systems Info
Repeaters
Police Call 2004
8. Radio Systems

In both VHF bands, Police, Fire, Forestry, Local Government and Highway Maintenance channels may consist of one or two frequencies. There is no required spacing pattern when two frequencies are used, except that they should be a minimum of 0.6000 MHz apart to avoid interference. The two may be used as a simplex/semi-duplex system (one for talk-out and one for talk-in) or a repeater system. Taxicab channels are semi-duplex pairs and Common Carrier channels are duplex pairs. All other VHF Radio Services are authorized for single frequency simplex.

In the UHF band, 450-470 MHz (and 422-429 MHz in the Lake Erie area), channels usually consist of a pair of frequencies. The two are spaced 5 MHz apart.

UHF-T channels, 470-512 MHz, always have tow frequencies that are spaced 3 MHz apart.

For both UHF bands, the lower of the two frequencies is assigned to the base station or repeater. The higher frequency of the two is

used by mobiles and control stations transmitting to the station or repeater. In some instances, the high side may be used for unit-to-unit communications.

806-894 MHz channels are always paired, with a separation of 45 MHz. Unlike UHF, the higher frequency is the base frequency, and the lower frequency is for mobiles and control stations.

Base/repeater stations 935/941 MHz are paired with mobile/control channels 39 MHz lower, in the 896-902 MHz Band.

Examples of frequency pairs:
33.4800 Base/repeater and mobiles
33.8200 Control station and mobiles
153.9950 Base/repeater and mobiles
155.7400 Control station and mobiles
453.0000 Base/repeater and mobiles
458.0000 Control station and mobiles
470.0125 Base/repeater and mobiles
473.0125 Control station and mobiles
820.0125 Control station and mobiles
865.0125 Base/repeater and mobiles
896.0125 Control station and mobiles
950.0125 Base/repeater and mobiles

As previously noted, with any two frequency channel, one of the frequencies (F-1) is used for base-to-mobile, while the other (F-2) is mobile-to-base. If the base is a repeater, F-2 is retransmitted on F-1 and can be heard by other mobiles. If the base does not repeat, a transmission cannot be heard by other mobiles. Mobile units operating on two-frequency channels (except Common Carrier) can switch their transmitters to the base (F-1) frequency. When they do this, they can communicate directly with other mobiles without having the signal go through a repeater. This is called the talk-around mode. (My comment: TXDPS uses this method.)

There are many different functions within a single department, and ideally, there should be one or more channels for each function.

From the KSU Amateur Club:

A BRIEF DESCRIPTION OF TRUNKED RADIO SYSTEMS
An 800 MHz trunk system has multiple frequency pairs (input/output; the input side always exactly 45 MHz below the output) (minimum three pairs / maximum 29 pairs) used to service several units/stations. There may be as many as 1000 users broken into several groups which use the five frequency pairs. The central controller keeps up with all the users and the status of the five frequencies. When a user keys up a radio, the radio sends out a digital burst which identifies which radio it is and what group it is in. The controller then sends out a "wake up" signal to all the other radios in that group and the transmission is heard by all the radios in that group. It's basically

a digital tone-encoded squelch system with a central computer which keeps up with which frequencies are in use, and automatically changes groups to open frequencies when a transmission is made.
On Motorola systems, one of the frequencies will be used for the control channel. Voice traffic may be assigned to the "closest" frequency first, and then to increasingly distant frequencies if the closer ones are busy, etc.
<snip>

http://www.k-state.edu/ksuarc/scan.html

I hope this answers your questions.

With Starnet, the primary repeater is located at the Clodine tower,
with alternates at downtown, Missouri City, and Richmond.

With Quad-C, which repeater(s) are being used?
Is the signal coming from South Woodlands/greater Tomball, downtown, or
somewhere closer, and more central to the Fire District?

thanks for the reply. I am familiar with VHF and UHF repeaters, but no
with the 800mhz trunking systems.

I was listening on the Richmond Site. He was on his HT, only about
100ft away. But when the ambulance showed up they were talking on
their mobile and it didn't desense my scanner at all. I am using a RS
Pro-95 with the factory RD.

You're welcome.

BTW, I included the other systems' info from Police Call since I was copying the info, and it didn't seem right to edit it out (my misspelled word[s] notwithstanding), but, it also provides a lot of info in a clear and concise form for newbies; especially if a Police Call book cannot be located.

I just want you to know that the scramble feature isn't very secure unless it is encryption. Voice inversion (It sounds kind of like Donald Duck) is semi-secure, but not very secure.

This is incorrect. Repeater splits in low OR high band VHF bands MAY be as narrow as 270kHz! 600kHz is the amateur split but RARELY seen in commercial. In pratice, most HIGH band VHF systems use a WIDER split like 3.0 MHz or more, though some do have less offset (like the old Conroe PD channel on a split of 1.140 MHz...with an AM station in town on 1140 kHz! Think about it :) WHY such a split you ask? Use of simple (2 or 3 cavity) BandPass only duplexers which can fit in the radio cabinet are allowed. BpBr (Band Pass-Band Reject), also called Pass/Notch, are much larger for narrow splits and as you get further out in freq split, the need for the notch goes away and you only need Band Pass to get sufficient isolation.
Band Notch or Reject duplexers works better at narrow splits than BP but doesnt afford extra rcvr protection of off channel signals that BP cans do. BpBr cans combine the two and do give you better notching at narrow spacing along with SOME bandpass protection (but they typically lose their BP characterstics after +/- 20 MHz or so)

There ARE some standard splits in VHF Highband...
RCC and IMTS (Old style mobile phones which dont exists anymore) and the VHF Marine bands have set offsets (wide ones such as 5.26 MHz but they are different from each other as well). Other than that, repeaters were not really used in the VHF band when it first went into use back in the 40s and 50s..and thus no standard split was devised. Something later corrected in the UHF band. The channels on a VHF repeater are picked by the freq coordinator before the

application is sent to the FCC and there lies the problem. With soo many DIFFERENT coordinators (yes there is more than one!)and NO standard offset, you may end up with a rptr output showing up on a rptr input 200miles away...and it doesnt take MUCH of a band condition to cause havoc in that case!
IF the FCC would redo the VHF band with a standard offset and allow trunking, the 800MHz band would probably go empty in no time!

BTW a LOWBAND VHF repeater is usually NOT allowed. Thus no standard offset was ever devised (except again for the old mobile phone system on lowband)....To operate a Lowband rptr requires a special need showing to the FCC and PL used on both input and output at all times.

> The two may be used as a simplex/semi-duplex system

> In the UHF band, 450-470 MHz (and 422-429 MHz in the Lake Erie
area),
> channels usually consist of a pair of frequencies. The two are
> spaced 5 MHz apart.

Except in broadcasting....Broadcasters who use the 450/455 channels for remote pickup normally do not use the opposite freq. It IS sometimes used in a rptr mode for a low power xmtr (2-15watts) out of a building on one freq and then repeated on the other freq at higher power (40-100watts xmtr power) back to the studio or rcvr site (tower bldg, etc). This can also be done with a VHF crossband to UHF setup (though most BC stations use the UHF channels only nowadays because of intermod and other issues on the 161 channels)

> UHF-T channels, 470-512 MHz, always have tow frequencies that are
> spaced 3 MHz apart.

This was done because of the TV channels being 6 MHz wide..to fit LMR operations in them, the split was reduced from 5 to 3 MHz...
In practice, 3 MHz works pretty well...(the main concern is the % of the split vs the operating freq..the lower % you go, the harder it is to maintain isolation between rptr rcvr and xmtr)

> Base/repeater stations 935/941 MHz are paired with mobile/control
> channels 39 MHz lower, in the 896-902 MHz Band.

Again an afterthought...the original 800MHz band was carved out of the high end UHF TV channels 70-83. Later the 900MHz range was added on and the split was NOT 45 MHz...so they had to go with what was available between them, 39MHz...which really pissed some companies

off wanting to expand their 800MHz operations and no more channels were available.

> <snip>

Thats a general broad description of a trunked system..there were several in the beginning. GE, EF Johnson, Motorola (who Standard cloned and then was sued), Midland (who also came out with a Midland clone), Kenwood and maybe others.

EFJ's LTR system uses a lowspeed data on all channels....each group is assigned a "Home" channel they STAYED on...unless the channel is busy with another group. THEN the data stream moves the entire group to another channel (ALT HOME) where they stay until their home channel clears. IF anyone in the group should key up, they either get their home channel or the alt in the 1st attempt..and if both were busy, they go to another unused channel and STAY on it until they move back to their home channel (when it becomes clear)..If all trunking channels had a conversation on it and some other group wanted to talk, they got a busy and were refused access even if there was a non busy channel at that moment (the channels had to

timeout from use before being released to a new user group)..

This is a little different from Motorola where you could be hopping RF channels all the time regardless of what other activity is present and Motorola using a control channel dedicated to signaling. It did make the channel usage much more efficient but also puts a strain on the RF gear (control channels swap every 24 hrs but are keyed up for the full24hrs while acting as control channel)

GE's was similar to EFJs but the MOBILE did the trunking decision, not the rptrs! It was much slower and clunkier than others... Today, Motorola and EFJ are about the only two in existance. All others have been licensed on these two (or went out of biz ;) EFJ eventually got a licensed from Motorola and makes Smart Zone compatible radios...but I havent seen anything from them in Astro yet.

Never dealt with Kenwoods but it looked pretty neat...Similar systems were devised for 220MHz ACSSB (Which died a quick death..much like HD Radio in broadcasting will ;)

Forgot to mention, 146.640 also retransmits shuttle audio. It is only on when the shuttle gets off the ground.
It transmits from the JSC grounds as well but has better range.
It can and will be interrupted with regular amateur radio comms that occur on the repeater. The audio can be shut on and off to reduce interference during amateur radio conversations.

BTW, it was a beautiful launch.

For you folks that might be out and about, there are a few frequencies you can listen to the NASA shuttle audio on.
For folks a few miles range of JSC, you can listen to 171.150 MHz.

For folks in the Houston area, you can listen to 444.300 MHz. Think this repeater is in the Galleria area.

There is also a link on Dickinson using 446.025 MHz.

Think these amateur radio links are tied in through Echolink or IRLP.

Going to watch the launch live on NASA Select now.

I am very sorry that I gave out the INCORRECT information that I obtained from my "source", POLICE CALL, which is still out of print.

<Rant mode ON>
Although the information that it presented in the 2004 edition was directed at the scannist who would need the information to understand the frequency information in the directory, written in layman's terms, has obviously been superceded, I yield my technical inexperience and lack of schooling to the more knowledgeable amongst us. Puhleaze pardon any mizpellings in the post 2, since I am also not a very gud typest and sumtimes spel the number "2" as "tow".

I was just answering a simple question for someone that seemed to want the simple answer, not the PhD level answer that reminded me of an economics class that I had just before lunch during my senior year in college.

<Rant mode OFF>

Anyway, thanx for the info.

(Please no flames, contact me off line at bpckty1@...)

Try 37840 TG on city of Houston trunked. It is the
only TG listed on radioreference page.

From: Scott Royall
Topic: 11711  Message: 11743

Sorry but I see a lot of inaccuracies in this group. That makes me wonder about the average intelligence of ☐scannists,☐ frankly. Per the current discussion, no, someone using a HT on the input side of a repeater you☐re monitoring is not going to desense you UNLESS your scanner is next to the HT. It☐s that simple. Remember that the intensity of any field varies inversely with the square of the distance. That☐s to say that the puny little HT signal is that much punier when it hits your scanner. It☐s amazing that scanners hear anything at all, if you think out the process. Rubber ducks are little more than dummy loads.

I am very sorry that I gave out the INCORRECT information that I obtained from my "source", POLICE CALL, which is still out of print.

<Rant mode ON>
Although the information that it presented in the 2004 edition was directed at the scannist who would need the information to understand the frequency information in the directory, written in layman's terms, has obviously been superceded, I yield my technical inexperience and lack of schooling to the more knowledgeable amongst us. Puhleaze pardon any mizpellings in the post 2, since I am also not a very gud typest and sumtimes spel the number "2" as "tow".

I was just answering a simple question for someone that seemed to want the simple answer, not the PhD level answer that reminded me of an economics class that I had just before lunch during my senior

year in college.

<Rant mode OFF>

Anyway, thanx for the info.

(Please no flames, contact me off line at bpckty1@yahoo.

When we had the fireworks at the church on Sunday night, the fire marshal we had there was using a standard HFD radio. However I was to busy to see what channel.

I would assume that the best tower to listen to LaPorte police on would be the Baytown tower, site 7. You may also hear them on some other towers, such as Pasadena, Pearland, Alvin, Huffman or downtown Houston, but the best tower to catch all the action (as much action as LaPorte has) would be Baytown.

Those control channels are 866.100 and 868.050 MHz.

Yeah, notice I said talkgroup*s*.
Seems they didn't abandon talkgroup 208 to move to 21904.
A couple of mornings ago, I heard what must be one of the rare transmissions they still make on 208.
One of the pilots told dispatch he was grounded due to weather.
So put that talkgroup back in and see what we've been missing.
Has anyone else left that talkgroup in and heard them talking on it?

Also, has anyone else noticed that 128.850 sometimes gets keyed up over and over again for 15 or more minutes at a time?

My Fiance used to dispatch for Lifeflight. She said the reason that they went to 800 was because they didn't want PHI listening in on their conversations. It seems that PHI was jumping some of the calls that Lifeflight was being dispatched on. Not to mention the fact that there are so many choppers coming in on the main pad at Hermann sometimes that they need to be on different freqs just to keep so many aircraft from talking over one another. I have noticed the interference too when I go down to the Med Ctr. to pick her up from work on occasion. Could it be that some transmissions are scrambled???

From: Myles Barkman
Topic: 11762  Message: 11766

That doesn't make any sense at all. Clearly, going to 800 MHz has nothing to do with people being able to hear you or not.
Lifeflight changed over to 800 MHz around the middle to late 90's, probably for extended range and increased inter-operability. PHI didn't even hit the Houston scene until late 2003.

And with so many helicopters coming in on the pad at Hermann, if they used different frequencies, it would be raining helicopter and people parts all over the medical center.
All helicopters HAVE to use 128.850 MHz when flying around the medical center.
http://www.hermannlifeflight.com/communications.html
Just like all aircraft must use a common traffic advisory frequency (CTAF) when flying into similar airspace.
All helicopters and banner-tow planes use 123.025 MHz when flying along the interstates in the Houston area so they can keep tabs on one another. It's all a matter of safety.
All aircraft entering the same airspace need to be able to know what each other is doing to avoid accidents.
There is no scrambling on aircraft frequencies.
Neither Lifeflight nor PHI scrambles their company traffic. They could if they wanted to, that's their prerogative.

I never heard that the Hermann pad's official name was the John S. Dunn helistop.

Apparently working for Lifeflight does not mean you
are an expert on flight or radio operations. Myles is
correct that makes no sence at all. Myles
Barkman <kg5ai@...> wrote:

159.990 PL 186.2, 159.900 PL 167.9 are Houston area dispatch. 159.900 PL 110.9 is out of Bryan. Talkgroup 09-001 on the Montgomery County EDACS system is used by PHI for dispatching. The Bryan station is linked to this talkgroup, I'm not sure about the other stations though.

# 11776. HFD and Fire Mutual Aid

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-07-10 20:03:43 UTC
From: Erich
Topic: 11776  Message: 11776

Does anyone know why HFD is simulcasting some of the tactical channels over to Fire Mutual Aid (154.280)? I have noticed it the last week or so, when an incident gets a channel, it seems to be simulcasted over to Fire Mutual Aid. Not sure if the simulcast is coming from HFD or someone else just patching the 2 together.

Erich

i have also noticed the simulcasting these past couple of
days.would'nt that interfer with other agencies if they needed to use
mutual aid?

That is kind of what I thought, that is why I posed the question that I did.
I can't imagine that it is HFD doing it.

Erich

# 11783. Mont Co EDACS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-07-13 01:17:48 UTC
From: Myles Barkman
Topic: 11783  Message: 11783

I was tuning through the 866-869 MHz band with the 296 in the car and I heard a weak EDACS control channel on 867.775 MHz.
I didn't recognize it so when I looked it up, I see that it belongs to Montgomery County. It appears to have it's Tamina site on the same tower as STAR-Net.
It looks like Mont Co's antenna is just below STAR-Net's antenna but the big difference in why I can hear Mont Co and not STAR-Net is that Mont Co has a lot higher gain antenna. ERP is 436.5 watts as opposed to 117 watts for STAR-Net.
So how far into Harris County can you folks monitor the Mont Co system?

All the other sites for Mont Co run comparable ERP levels around 100 watts. It's only the Tamina site that they report the big gain. Maybe it is to extend coverage into Harris County for transfers or pursuits.

You can hear them regularly in Giddings some 80+ miles away from Conroe?
What kind of radio/antenna are you using?
The range of most trunked systems (as far as listening to them on scanners)
runs around 25-30 miles.
So typical range from Magnolia would put the edge of reception about 8 miles
east of Brenham.

Many of the Sheriff's Office and Galveston PD talkgroups are the same. Lots
of talkgroups that were above 57000 on the old system have been changed.
I haven't listened to the STAR-Net site yet since I realized that the old
system was down.

# 11798. Re: [HoustonScan] Mont Co EDACS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-07-15 03:24:55 UTC
From: Myles Barkman
Topic: 11783  Message: 11798

What kind of radio are you using? Is it a 2-way? I'm not familiar with "NCSCAN". Is that the message a commercial radio says when out of range of a trunking system?

On my trip across the north loop this morning, I started getting spotty coverage on the east loop south of I-10 and up to 290 and Tidwell area.

Here at the house in Pasadena, I can barely hear the control channel with the squelch off and holding it up in the air in certain parts of the house. That is on a 296 with 800 MHz duckie.

I can use my EDACS, from Brenham.

Frank

Myles Barkman <kg5ai@...> wrote:
You can hear them regularly in Giddings some 80+ miles away from Conroe?
What kind of radio/antenna are you using?
The range of most trunked systems (as far as listening to them on scanners)
runs around 25-30 miles.
So typical range from Magnolia would put the edge of reception about 8 miles
east of Brenham.

No, Maxon made some EDACS radios for a brief period before M/A-COM sued them
and forced them to stop prodiction. Kinda like how Standard made Motorola
trunking-compatible radios for awhile.

# 11809. STAR-Net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-07-16 01:46:20 UTC
From: Myles Barkman
Topic: 10539  Message: 11809

Been logging talkgroups and looking at the data from the Texas City site.
They are reporting Freeport site 24 with control channel 866.5375 MHz. So
that site must be alive and kicking now.
Site 19 is Galveston on 868.6625.
Would like to get confirmed channels used at each of these sites. They are
too far away for me to hear.
Freeport would probably only be heard by folks in southern Brazoria County,
perhaps south of Danbury.
Folks in Jamaica Beach might be able to hear it. How many folks we got on
here from there?

The Galveston site can probably be heard throughout Galveston County.

I imagine the next big change to look for might be League City.
We already know the site will be 22 and there are already freqs licensed
(WQET713) for them.
Just sent up a new version of my STAR-Net list:
http://home.houston.rr.com/freqzone/freqs/star-net.html

Been playing around with the calculator on a couple of talkgroups that I've
been able to confirm had to move to different talkgroups.
It appears that talkgroups that were roughly above 57000 have been shifted
down by decimal 8816.
For example:
Hitchcock FD was on 59312 - 8816 = now on 51904
city? jail was on 59984 - 8816 = now on 51168
data bursts was on 62672 - 8816 = now on 53024

So maybe it is that simple.

See what happens if you listen to 52736 (61552-8816) for Tiki Island FD.
I never did hear Tiki Island PD on 61488 on the old system.
Do Bayou Vista and Tiki Island share PD and FD talkgroups?
Who dispatches them, GCSO or Dickinson?

911 867.8000
912 868.350
913 868.6875
914 867.3000
915 867.850

MAKE SURE AFTER THE CHANNEL NUMBER YOU HAVE ED WHICH IS THE EDACS. USE MODE
TO GET TO IT

ONCE U HAVE THIS AND BEFORE U ENTER ANY TAGS TRY TO GET THE FEEL OF IT.

LOCK ALL BANKS BUT 9 OUT
PRESS FUNC THEN DELAY AND IT SHOULD DISPLAY OPEN.
IN THIS MODE YOU WILL GET EVERYTHING THAT COMES THROUGH
PRESS SCAN
EACH TIME IT STOPS ON A CHANNEL PRESS TRUNK AND IT WILL SAVE IT

AFTER YOU GET A FEW OF THESE GO TO RADIOREFERENCE.COM AND LOOK AT THE TAG IDS

ENTER THE TEXT FOR EACH TAG.

ONCE U GET THE HANG OF IT PROGRAM IT ON YOUR OWN.

AT LEAST THIS WAY YOU CAN SEE IF ITS WORKING

# 11817. CABLE FOR PRO-97

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-07-16 04:55:33 UTC
From: SCOTTJENGLE@aol.com
Topic: 11817  Message: 11817

IS THE PRO-95 AND PRO-97 CABLE THE SAME?

MY WIN 95 PROGRAM WORKS GREAT ON COM 4 WITH PRO-95

USING THE SAME CABLE I TRY WIN 97 ON MY PRO-97 AND COM 4 WONT OPEN IN FACT
NO COMM PORTS WILL WORK

ANY IDEAS???

SCOTT

What does Hitchcock FD 60720 translate to? It's not just a decimal subtraction apparently.

While I'm at it here are a few more that need re-mapping:

Police:

Tiki Island 61488
Tiki Island 61552
Tiki Island 61584

Tiki Island 61616
Bayou Vista 59376
Jamaica Bch 60816
Jamaica Bch 60848
Kemah 62928

Fire:

Hitchcock 60720
Tex City 64800

Been playing around with the calculator on a couple of talkgroups that I've
been able to confirm had to move to different talkgroups.
It appears that talkgroups that were roughly above 57000 have been shifted
down by decimal 8816.
For example:
Hitchcock FD was on 59312 - 8816 = now on 51904
city? jail was on 59984 - 8816 = now on 51168
data bursts was on 62672 - 8816 = now on 53024

So maybe it is that simple.

See what happens if you listen to 52736 (61552-8816) for Tiki Island FD.
I never did hear Tiki Island PD on 61488 on the old system.
Do Bayou Vista and Tiki Island share PD and FD talkgroups?
Who dispatches them, GCSO or Dickinson?

From: J.Scott Brinly
Topic: 11786  Message: 11820

Tiki Island is dispatched by Galveston County SO. Bayou Vista has been dispatched by both the SO and Hitchcock, I am not sure who is dispatching them right now, but if I were a betting man I would guess it was the Sheriff's Office. Tiki and Bayou Vista have there own talkgroups, although I am sure you can here them on each others on a regular basis as they work together quite a bit or at least used to.

I goofed on that talkgroup.
60720-8816=51904 that is what Hitchcock FD is using.
59312-8816=50496 which is what Bacliff/San Leon FD/EMS is using.

Many folks call the Alvin site "Dickinson". It is actually in Galveston County and not in either city limits.
I call it Alvin because the two ways indicate "AL" when tuned to that site.
It's about 2 miles east of the city limits of Alvin, across the street from the city limits of League City, and about 3 miles west of city limits of Dickinson.
They probably started calling it Dickinson since Alvin is in Brazoria County and the site is in Galveston County.

Alvin is easier to say anyway.

Looking at the control channel data, it appears the secondary control channel for the Texas City site 18 is not 868.0625 but now 868.800 MHz. Can anyone with a real 2-way STAR-Net radio find out what the aliases (2-letter designation) are for Texas City, Galveston, Freeport, Ames, Hempstead, Richmond and Tamina are?

Myles,

I think (it has been a few years) that we at RR started calling
in Dickinson because that is what it was called on the old
TechCenter map (no longer available) that was on the web site;
and of course the FCC license (WPKL474) lists it in Dickinson,
which helps keep things straight.

Your comment about the display on the radios is interesting, I
wonder why they did that?

Lou Maag

I've been listening to the re-computed talkgroups for Jamaica Beach, Bayou Vista, and Tiki Island on the Alvin/Dickinson tower and the Texas City tower all day and have not heard a peep. It's been silent. Do they just not transmit that often? I heard all three sites check into the GC EOM radio check this morning but nothing since then.

From: J.Scott Brinly
Topic: 11830  Message: 11831

These agencies have very little radio traffic. Jamaica Beach and Tiki Island can actually go for days without a call for service over the radio. Bayou Vista is slightly more active, but not very much. Jamaica Beach is (or at least was) dispatched through the Hitchcock Police Department on their own talkgroup. Tiki Island and Bayou Vista are (or were) dispatched by the Sheriff's Office on GCSO 1 – Island. They used to be identified as:

T (Tiki)1XX
1 V (Victor) XX

Tiki Island has always been reffered to in radio traffic as Tiki Units as the Auto Crimes Task Force uses the Tom designation.

Hope this helps decipher some of this for you.

I've been listening to the re-computed talkgroups for Jamaica Beach, Bayou Vista, and Tiki Island on the Alvin/Dickinson tower and the Texas City tower all day and have not heard a peep. It's been silent. Do they just not transmit that often? I heard all three sites check into the GC EOM radio check this morning but nothing since then.

# 11838. next hamfest

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-07-19 01:13:31 UTC
From: Myles Barkman
Topic: 11838  Message: 11838

Does anyone know when the upcoming hamfests will be in the area?
I have a few items I need to part with but don't want to put them on the curb or donate.
I want them to be used by fellow hams/electronics folks.
I know I jut missed the one in Texas City. If I was ready for that one, I'd have gone to it.

I don't think Clear Lake ARC does the hamfests now and the Brenham one in October is a little far off in distance and in time.

# 11839. Galveston Co STAR-Net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-07-19 02:35:30 UTC
From: Myles Barkman
Topic: 11839  Message: 11839

Well, I've convinced myself with some other talkgroups confirmations that the 8816 thing works pretty well. That is, if the talkgroup on the old 6F2E system was above 57000 (or so), then you subtract 8816 from that to figure out what the new talkgroup will be with the move to STAR-Net. Other talkgroups below 57000 are the same.
Now here's the catch. Since there are two distinct sites down there that are not simulcast like the old system, I think a lot of the island traffic is being carried on the Galveston tower site. Some stuff is making it to the Texas City site but not as much as was heard when the sites were tied together.
It will take someone in range of both sites to confirm the many talkgroups that have eluded us.

I too was subjected to the radio testing, etc.; so much so that I locked out the channel on my scanner. Until I read this I forgot to unlock it. Been listening for about 30 minutes now and haven't heard anything yet.

Just an update on this, there is traffic on it right now (obviously an air unit) and it is in the clear and still using CTCSS 123.0 as they are trailing someone. So far have not run into encrypted or digital traffic on it.

From: chrsclhn
Topic: 11850  Message: 11850

Does anyone have a win95/pro95 file for the Pearland area?
Is the Pro95 compatable with the systems in this area?
I am interested in the Pearland PD, Brazoria Sheriff and
Pearland VFD.

I am located near 288 & 518.

Thanks
Chris

Well that sounds like a viable option. Not too far away and only a month away.
I don't have any great stuff like radios, mainly some parts, maybe some small power supplies, some old scanner magazines (Pop-Comm and MT) and some accessories.

Thanks Brian and Glenn for the tip.

> can they do about this? snip <

It's a training and system administrator issue.

When the system first started, MA-1 was reserved for Law Enforcement to talk with other agencies that did not have TAC channel access (yes, some smaller agencies did not have the countwide TAC talkgroups [Tacs 1-4 at the time], but did have the Mutual Aid talkgroups [MA-1 and MA-2). MA-2 was for non-Law Enforcement agencies (Commissioner Road Crews, Animal Control, Medical/Fire Services [very few at the time were on Starnet, so, except for Life Flight, it was a non-issue for a while], etc.) and the easy access of the talkgroup and lack of a Net Control Agency caused MA-2 to become a default talkaround talkgroup/channel for just about everyone on the system.

As Starnet expanded, MA-2 has remained a BS channel for many non- Law Enforcement agencies, while MA-1 is now rarely used for BS since the larger agencies now have their own agency Tacs. There are a couple of exceptions, such as the agency that often uses Channel J.

Happy Scanning

Well,

That explains why the signal is very weak at the West Loop and the Katy Freeway.

I was presuming (hoping?)that the repeater would be either higher or closer to the Medical Center for ambulance use. But, I also understand the economics of using in-house facilities and having to pay rent in the Galleria, or similar, area.

We had several of the evacuees come into the RS yesterday. They were saying that the students were horsing around with some solid hydrogen peroxide. The other story was that it was indeed a meth lab.

Well, since I received such a plethera of interest on this last time, I'll update it. The HAS (Houston Airport System) is installing a fiber DAS (Distributed Antenna System) at Bush Intercontinental Airport. All of the major wireless carriers as well as Continental Airlines and STAR-Net will be on it. Terminal A, B and FIS are pretty much finished. STAR-Net is using a channelized BDA to feed their part right now (the donor site being Humble), but will install a full-fledged site there in the near future, so look for some licenses at Bush to pop-up.

Pasadena changed to Starnet. Not all the TG may be
listed as of yet. At the bottom of the Starnet page at
radioreference is the link to KG5AI. This is Miles
Barkman's site. It will list all of Pasadena. Remember
if you find an error or new TG let us all know.

Good news though:

They are only at 40 Watts right now. THey will be turned up to 300 Watts
when the project is complete. The FCC has to come investigate a leaky filter
or an illegal rebroadcast of a particular local TV station, first.

Great.

>The FCC has to come investigate a leaky filter or an illegal
rebroadcast of a particular local TV station, first.

Any ideas/hints as to what it is transmitting, and the general location?
Reminds me of what I observed at a radio store many years ago in the
Bellaire/Renwick/Rampart area. A customer (not me, I was buying my
first Bearcat Scanner) came in and asked for the best TV antenna that
would fit into an apartment and receive Channels 3 and 4.
Seems a local "bookstore's" VCRs were leaking their signals and he
wanted to watch free "movies". The dealer sold him his premium small
Yagi TV antenna and cable, and I walked out with my first Bearcat
16-channel programmable scanner.

I bet you won't hear anything with that code listening to Houston or Galveston radio transmitters. That code (48021) is for Bastrop county and would typically only be warned off the Austin or La Grange radio sites. What county are you wanting to get warnings for?
Also, it will only work if you are parked on the weather radio freq. You can't use the radio for anything else when using it as a SAME weather radio. Too bad it doesn't have a dual receiver for NWR.

Now Harris county is 48201 so if you have that programmed, I don't know why it wouldn't work except for the above statement.

Myles

Just checking the owners manual quickly, you can only use the weather SAME function when in "SAME standby mode" which is when you can't use the scanner for anything else.
You can use the weather priority mode which only detects the 1050 Hz tone (ignoring the FIPS SAME code) which is transmitted after NOAA sends out the SAME code.

Right.
The scanner will only be able to decode the SAME data if it is parked on the weather channel all the time.
If it only jumps to the frequency every few seconds, chances are, it would have missed part of the data and would not be able to decode it.
With the general tone of 1050 Hz, you only need to catch a piece of it to know the tone is there so and it runs for 5 to 10 seconds so when in priority mode, has a good shot of hearing it when it is sampled every 2 seconds.

Here's the State's hurricane evacuation plan for District 2A.
It's a lot of reading but shows how specific plans have been put in place
with personnel at specific places to direct traffic and when and where
contra-flow traffic will occur.

On Hwy 290 almost to Hempstead, you start to see the hurricane symbol painted on the shoulder lanes on both sides of the road. Not sure if it means contraflow or what but it's there.

They send out a test every Wednesday between 10am and noon.
If there is a threat of severe weather, they postpone it until the next day.

That's correct: you don't have to give them permission to do a search.
The only way they can do a search on your vehicle without your
permission is if they have taken you into "custody" first.

Sorry I didn't see this before now. I thought they had only one location in Houston: on Wright Rd (just NE of the intersection of 90W and SW Fwy). Walk into THAT location and all you'll see are mattresses and blinds and curtains and stuff, but they're an Internet store for scanners, as well.

That is a good site to check the roads for yourself, it's by no means complete. There are over 400 cameras on the freeway system along with close to 100 at busy intersections that belong to Harris County. At TranStar, the cameras do provide live video while those on the internet are snapshot photo's and can be as much as 5 minutes old. In the future TXDOT has plans to provide live video instead of the snapshots.

The AVI system (colored traffic speed) is live on the web site and is provided by the little antenna's that are located at various locations on the freeway signs and other places. These are not to be confused with the infrared cameras that are used to control the control lights at freeway entrances. These are the cameras that are on single poles about a quarter mile before the entrance ramp generally on the right shoulder of the freeway and they are always pointed down.

The surge of rain is making it's way into Galveston and Brazoria Counties at this time. Some isolated storms have popped up on the eastern part of Harris County as well.
No overwhelming concern as to this system becoming a depression, mainly just a rain-maker.
Be prepared to hear more idiots getting stuck in their cars is high water.

I thought we had determined that it was up in Tomball and not downtown. I have a heck of a time monitoring it here in KM 488H.

Whats funny about this is after the whole thing was over, I drove the U-turn under Beltway at Fairmont and saw the tire laying there right under the bridge along the curb, and the first thing that came to my mind was "I should sell that on eBay!" But i figured it might police evidence or something so I didnt touch it. Oh the money I could have made!!

Date: 2006-07-29 22:45:32 UTC
From: Myles Barkman
Topic: 11926  Message: 11926

I see that they put 867.3875 MHz into service on the Houston site.
Wonder if that means they took one of the repeaters offline for maintenance
or are going to use it at a different site.

Does anyone know if site 8 at the Criminal Justice Center works throughout
the entire building or if it is meant for the ground floor/basement areas?
Still have never gotten any info on freqs used or details of how the site is
run. Is it "leaky coax" technology or something else?

Does anyone monitor the Humble STARNET Talkgroups?

I have programmed in the data found on the various websites (pasted below) but never get any hits. I'm listing from just next door to Humble and have no problems hearing many other STARNET transmissions. Any help would be appreciated.

Desc Freq DEC Description
Humble 866.225 * 10576  Police Dispatch 1
Humble 867.2125 10608  Police Dispatch 2
Humble 867.425 10672  Police Supervisors
Humble 867.625 10704  Police Tactical
Humble 867.7375 10736  Fire/EMS Disp
Humble 868.15 10768  Fire/EMS Disp
Humble 868.2 10800  Fire/EMS Supervisors
Humble 868.4 10832  Public Works 1
Humble 868.625 ** 10864  Public Works 2

Thanks.

Chuck

From: sandyj
Topic: 11930  Message: 11930

and you think it is complicated now read this

were every channel is a different frequency

and some are encrypted, some are pl'ed,and dpl'ed

at the same time on transmit and receive.

all APCO 25 radios on all of the different tx and rc,

channels up to at least max of 25 channels per radio.

this will be insane to scan. with some radios having

the ability to go both AM/fm switchable.

makes you just want to scream.

anyway have a good day all

regards

sandyj

July 1, 2006

Packing The Tool Box

Law enforcement operators want more capability to convey from the air information on what's going on on the ground without paying much more for the gear needed for that work.

Airborne law enforcement units are looking to balance a constant demand for greater capability to support command and control of crime, emergency and homeland security sites with ever-present budget constraints.

Vendors are responding with new or refined equipment that, while at times more expensive, offers greater ability to collect, integrate and relay information from the "bird's eye view" of what is transpiring on the ground.

On the communications front, Northern Airborne Technology Ltd. recently won the approval and acceptance of the U.S. Forestry Service of its NPX136D-070 digital P25 transceiver.

The panel-mounted, self-contained, APCO Project 25 compliant VHF transceiver is designed for a single user and can be programmed for wideband/narrowband/digital operation on a per-channel basis. A separate guard volume and guard transmit select switch is provided. NAT tailored the design of the radio for the space and weight restriction of helicopters and light, fixed-wing aircraft.

The NPX136D-070 also has an online "Help" screen to foster intuitive operation. Customers can use PC software to upload and download channels and store multiple sets of operating

frequencies. NAT says one radio's channel information can be "cloned" to another unit for "fast and easy updates."

Technisonic Industries is pushing its TDFM-7000 series of FM transceivers for law enforcement, public safety and air medical operations. The configurable, multi-band airborne transceiver can support any mix of up to four VHF (136-174 MHz) UHF Lo (380-470 MHz), UHF Hi (450-520 MHz) and both the 700-MHz and 800-MHz band (764-870 MHz) modules, according to the company.

Heli-Dyne Systems recently won a completion contract for the Westchester County, N.Y., Police Dept.'s new Bell 407 that includes installation of Technisonic's TDFM-71158.

Wulfsberg opened the year with FAA certification of its FliteLine suite of communications and navigation equipment and since has been producing line replaceable units for VHF communications, VHF navigation, and DME. The equipment is designed to work in concert with the color control display units.

The FliteLine system was designed to allow installation of a complete six-unit control display suite (two for communications, two for navigation, one ADF and transponder controls) in one-third less panel space, according to Wulfsberg. The FliteLine equipment features unique full-color displays, and is lightweight and affordable.

On the situational awareness front, AeroComputers plans to field its latest moving-map, the UltiChart MIL-5000, shortly; it has said it will be available in the third quarter. The tactical moving map system is designed for use in the harshest environments, according to the company. It is intended to integrate GPS-based moving maps, image collection and transmission, illumination and data storage for all airborne applications.

"While the UltiChart MIL-5000TM shares a common heritage with our existing product line, we engineered it to meet the exacting requirements of military customers", said Mark Gassaway, AeroComputers president.

Separately, the Fort Worth, Texas Police Air Support Div. purchased two AeroComputers UltiChart LE 500 GPS mapping systems for its aircraft.

The systems will replace paper-based maps with customizable, GPS-based moving maps that offer local, nationwide and application-specific coverage.

"With the entire Tarrant County [Texas] parcel data loaded, coupled with our Wescam IR systems, we will be able to decrease our response time and enhance our capabilities within the department," said Jay Paschke, Air Support Division Chief Pilot.

Flight Management Systems is working with Robinson Helicopter Co. following that manufacturer's successful flight testing late last year of FMS' Moving Map system integrated with a mobile dispatch terminal. The testing was conducted in cooperation with the Fontana, Calif. Police Dept. and California Aviation Services in an R44 Police helicopter.

The system is intended to allow real-time communications with dispatch, as well as complete use of the fully functional moving map.

On the imagery front, Los Angeles Police Dept. Air Support Div. late last year deployed Cineflex's V14 HiDEF high-definition aerial imaging system for its airborne law enforcement missions. Cineflex claims the system delivers images three times more detailed

than standard definition quality.

The Cineflex V14 HiDEF is able to conduct surveillance missions from much higher altitudes and greater standoff distances than previously possible, according to the company. With its extreme long lens technology and full HD resolution camera containing over two million pixels (1920X1080 lines of resolution), the V14 HiDEF provides the ability to covertly monitor suspects with an unprecedented level of detail from thousands of feet up.

Several U.S. airborne law enforcement units are flying IAI's POP200 optronic payload. They include the Dale County, Ala., Sheriff's Office; the Arizona Public Services Dept. and the St. Louis County, Mo., Police Dept. The lightweight gyro-stabilized POP200 is a modular, day/night observation system that includes a high-performance focal plane array thermal imager (IR), a color CCD TV camera, automatic video tracking and a laser pointer.

Microwave Radio Communications is making a push in the airborne law enforcement and homeland security markets. The company late last year hosted its first annual public safety users forum and training session in league with the Massachusetts State Police Air Wing.

The two-day conference at the police hangar in Plymouth, Mass. was designed to showcase the company's products and give law enforcement agencies from that state hands-on training environment to improve their video downlink skills and learn about the latest technology. The event's theme was an interagency day of information sharing.

Six law enforcement agencies participated with their own command vehicles receiving transmissions from the Massachusetts State Police Helicopter, according to the company.

According to the FCC, they don't use a repeater. They are only licensed for Base and Mobile. If they are using a repeater, the only way you are going to find the input is being close and using something like CloseCall or SignalStalker.

The "MDC-1200 IDs" or data bursts you heard is probably OTAR-Over The Air Rekeying. It is not the encryption itself but the way they make sure everyone that uses encryption is using the same key to decode the encryption.

No clue as to what it was used for. Just a hiss for a couple of seconds, then another hiss, silence for a bit, then hiss, hiss, silence, hiss, hiss, for about 2 minutes. It was almost as if someone was keying a microphone. And, it was definitely not P-25 since I was using a BR330T. I presumed it to be 147th FIG since I had programmed the frequency from your list.

Maybe it was a couple of pilots chit-chatting, or RF noise. After all, I did add the caveat, "seems". Who knows, since nothing but noise was heard.

And, it could have been another unit transiting the area. Since nothing had been heard before, the frequency could be used by itinerants. Who can tell what the military will do?

None of the other known frequencies were heard. Since the color levels were raised, maybe all comms, except with the tower and FAA have become encrypted. I did hear some UHF air traffic later in the day, but I didn't pay attention as to which ones they were, since they were from the latest Freqzone.

OK, I didn't know if you were listening from the West side or were over on my side of town and heard some ground ops using FM.
From the pattern of static and silence you described, I wonder if you weren't just getting some interference from nearby electronics (i.e. another scanner, computer, printer). No doubt that you have dealt with this before and would recognize it.

I really should put down the sources of some of the info I have so I can follow up on it. That one could have been from a book put out in the 80s and the info could have been bad to begin with or is long since obsolete.
If you adhere to this band plan suggested by Monitoring Times, 148.575 MHz is not in the Air Force "band" but in the Army's.
So it may be bogus after all.

Bogus is a distinct possibilty, but if it is Army, it could be someone in the Barker/Addicks Dams area testing new radios. Possibles could be the Corps of Engineers operations, or Reserves/National Guard training. There is a reserve center at Westheimer and Westheimer Parkway and there is a training area inside the reservoir at SH-6 and Briar Forest.

Ah, the quest continues.

Guess it would help if I included the link about the band plans as listed on Monitoring Times site:
http://www.monitoringtimes.com/html/mtMilVHF.html

For the most part, it seems to match up well with things I've confirmed.

# 11951. 855.2125 on STAR-Net?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-13 17:32:19 UTC
From: Myles Barkman
Topic: 11951  Message: 11951

855.2125 MHz used to be the conventional fire repeater for Baytown.
It was abandoned when Baytown switched to STAR-Net.
I got a hit on T4Win that it may be used for STAR-Net Houston now as one of the lower-use repeaters when the system starts getting busy.
The Houston site (or any site for that matter) can have a maximum 28 frequencies in use. It's been awhile since I've been able to confirm what all 28 possible freqs Houston might use. Frequencies keep getting dropped, added, and moved around to other sites.
I can tell you what 25 or so are but the others don't get used much except for when the system gets close to being overloaded. You would think with as many agencies use that site that it would happen more often but perhaps there are some talkgroups that have priority for those freqs and they only come into play when certain talkgroups try to become active and the rest of the regular freqs are busy.
If they do use priority on the system, I hope the Metrolift folks are at the bottom of the food chain.

After reading the following post on Fedcom, I am beginning to suspect that the Corps of Engineers may have new radios. I have not heard any new traffic, but, it was rare to hear the CE frequencies.

----- Original Message -----
From: "Gil woodside" <Wa1lad@...>

Sent: Friday, August 18, 2006 7:58 AM
Subject: [FedCom] 148.925 Mhz ACE ???

148.925 Mhz
0800 hrs local

Reservoir Control taking readings from unheard locations. I usually hear ACE on 168.325 Mhz Friday mornings. I had the usual activity on 168.325 Mhz today and it was a different control from the station on 148.925 Mhz. Anyone have an idea where this could be ?

thanks,
Gil

If you adhere to this band plan suggested by Monitoring Times,
148.575 MHz is not in the Air Force "band" but in the Army's.
So it may be bogus after all.
> >
>
> Bogus is a distinct possibilty, but if it is Army, it could be someone in the Barker/Addicks Dams area testing new radios. Possibles could be the Corps of Engineers operations, or Reserves/National Guard training. There is a reserve center at Westheimer and Westheimer Parkway and there is a training area inside the reservoir at SH-6 and Briar Forest.

Ah, the quest continues.

# 11957. TDCJ - Downtown Houston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-19 03:34:39 UTC
From: bpckty1
Topic: 11957  Message: 11957

Earlier this week I heard 153.7550, PL 100.0,
in downtown Houston.

Is this the one used by Top Street Jail?
I know it is used by Lynchner State Jail in Humble,
and Darrington in Rosharon, but I did not hear a squelch
tail and the comms appeared to be simplex.

This is channel 48 in our lineup. A lot of divisions and units may have this as a primary channel for whatever operations they need it for. Could be maintenance, an administrative segregation block, or even a back channel for field force or supervisors. All of our newer radios have the first three zones of 16 channels loaded with simplex channels and unit repeaters.

# 11960. Re: [HoustonScan] next hamfest

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-19 04:44:50 UTC
From: Myles Barkman
Topic: 11838  Message: 11960

I am set to be at this sale tomorrow.
Don't have anything much for scanner folks except for some old Pop Comms and Monitoring Times magazines.
Mainly a few accessories for ham radio and CB.
My big item is an 800 MHz trunking mobile Spectra model # D35ZXA5JC2AK.
That makes it a 30W dashmount 800 MHz SmartNet trunking radio. It has been retrofitted with a 12-button control panel since the previous owner damaged the original panel. So some of the buttons on the panel do not operate as should be expected.

It is used, in good condition and I never actually put it to use.
It comes with a DTMF microphone, speaker/power cord, and the programming cable that plugs into the RIB ($40 by itself).
RIB, software and antenna are NOT included.

May try to listen to Pearland ARC 147.220+ 167.9 PL also.

Myles

I don't have a full lineup handy right now. I used to, but I have moved a couple of times since then. Besides, some places, especially down south, TDCJ will change its simplex frequency if there is not a repeater in place to keep gangs free-world counterparts from knowing too much about operations. The repeaters don't really change though. I will see if I can dig it up. I posted it to RR.com but only with the frequencies and tones that I could confirm.

# 11963. Re: TDCJ - Downtown Houston

I agree with the security issue, and I was unaware that you had made the post to RRDB. But, I had seen the gaps, and was wondering if you had any other information that would fill the channel spacing gaps. You can e-mail me privately, if you wish, at bpckty1@....
And, don't worry about it not being handy. It is in a "safe place"; safe, even from you.

OK, guess the rains gods had bigger plans for today than we did. I didn't sell anything but they may try again next month.
Pearland ARC is going to try having these tailgate sales every three months, next main one being in November.
Seems they will be at the school parking lot at Hwy 35 and Oiler. Hope the weather will cooperate next time.

# 11970. RE: RE: [HoustonScan] Humble Freqs/Talkgroups

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-21 02:17:52 UTC
From: Chuck Sprick
Topic: 11928  Message: 11970

A Uniden BC785D and a Uniden BC250D portable,. I have one digital card presently in the 250, but not programmed for anything here, although I did listen to LAPD before we moved. Any digital nets here?

I'm running ARC 250 software and just put a Radio Shack discone antenna (new stainless steel $72 version) in the attic. I can trunk track fine, but never hear any of the Humble talkgroups, at least the ones listed below. When I'm in ID Search mode, I do get hits from other talkgroups on the bank with the Humble data programmed (I have dedicated one bank just with the Humble freq's and talkgroups) but none of the talkgroups from Humble. Nothing ever comes up in ID Scan mode on that bank.

I also have the downtown Houston STARNET freq's and talkgroups in another bank and receive lots of them fine. I'm just north of Humble, so distance should not be the issue.

Any suggestions would be appreciated.

Chuck

It will be one of these:
TG 2384 FBSO East Side Disp (Districts 2, 4, 6)

I guess you can monitor for us and advise.

Anyone here own a pro93 or 95? I am trying to program my mother in laws scanner and I can't figgure out how to get it to "id scan" like a uniden does. I want it to only scan the talk groups I put in. It keeps scanning the entire star net system.

# 11976. W I-10 FD Interference

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-26 15:48:27 UTC
From: bpckty1
Topic: 11976  Message: 11976

Last night there was an intermittent data stream type interference on West I-10 FD's primary frequency, 460.2500 (D114). What was interesting is that it was using the DPL.

Any idea who the user was? Was it skip? Was it from Beaumont, or Mexico (Don't laugh, it has happened before on W I-10's old channel 5/6 (data tone) and even now occasionally on Katy FD's primary (Spanish speakers).
;^>

What seemed sort of ironic is I had just finised reading the September 2006 issue of "Popular Communications" magazine which has an article, 'Intrusion Into the Ham Bands: Strange, Out-of-Place Signals', that discussed interference from various sources, some of which were easily explained (kids, inadvertantly stuck open microphone, illegal/improper use of the ham band, improperly programmed commercial radios), and some that came from poor maintenance of equipment. Talk about a Deja Vu experience.

The City of College Station is using that freq for data, for what use I hadn't determined yet.
They do use DPL. Doesn't appear to be a repeater but they may be using 465.250 as well.
DPL on 460.250 was 631.

Out of the blue, just got word that League City is about to join STAR-Net tomorrow and Friendswood will be on very soon.
Don't have any specific info for League City, but have these to watch out for for Friendswood:
20016 Friendswood VFD Primary
57552 Friendswood VFD Ops 1
16544 Friendswood VFD Ops 2
49824 Friendswood VFD EMS
23728 Friendswood PD Primary
56784 Friendswood PD Patrol
16448 Friendswood PD (???)
16384 Friendswood PD (???)
16352 Friendswood PD (???)
56816 Friendswood City OPS

The only ones I've logged used before are 20016 and 23728.
Haven't noticed a particular block of talkgroups being keyed up lately so don't really know where League City will pop up.
Keep a watch on it.

As for the League City trunk system 0D16, right now, the control channel is on 860.9875, with 857.9875 and 859.9875 as other control channels rotated daily.

When it changes to STAR-Net, the control channels should be 856.9875 and 857.9875 MHz.
The site ID should be 22.
Since I don't know what frequency may become the control channel when the switch is made, I am just going to have the computer listen to the Alvin site, figuring that it should pick up some stray activity as well.

# 12000. NASA acft fleeing TS Ernesto

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-29 13:18:41 UTC
From: allanstern@aol.com
Topic: 12000  Message: 12000

NASA acft fleeing TS Ernesto
``````````````````````````

It is Tue, 9:09am EDT (1309).
Lotsa NASA acft are departing this area this morning, in what appears to
be an attempt to get out of the way of Hurricane (Tropical Storm) Ernesto.
NASA 965 departed Patrick AFB and headed west, most likely to Houston;
NASA 924 departed the Shuttle Landing Facility moments later.
Handoff sequence toward the Gulf of Mexico seems to be the usual:
132.65
126.95
125.075
126.525
128.225
133.9

# 12001. Radio Shack Pro 93

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-23 22:31:53 UTC
From: lawman7449
Topic: 12001  Message: 12001

My mother in law brought me a Pro 93 to program for her. I currently use a Uniden 780 for myself. On the uniden I use "id scan" where I only scan the talk groups I want to listen to.

On the pro 93 I am having trouble getting it to scan only the talk groups I program in, it wants to scan the entire motorola system. Any help on settings?

# 12002. WB-57F "NASA 926" is aloft; now holding at FL480 to FL 510

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-29 14:56:02 UTC
From: allanstern@aol.com
Topic: 12002  Message: 12002

It is Tue, 10:52am EDT (1452z).
The very beautiful and unusual NASA SB-57F "NASA 926" has departed
Patrick, heading for Ellington Field. At the altitude this bird likes to fly, and
with the excellent radios NASA uses, we should be hearing his comms at great
distance. He is using VHF ATC freqs.
He is going to do a hold in the Titusville area in the block FL480 to
FL510 before continuing on to Ellington. He is up with Miami Ctr on 119.825.

# 12004. switching to STARNET

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-29 18:59:05 UTC
From: Dominick
Topic: 12004  Message: 12004

will Montgomery County System go to STARNET soon or one day?
like the League City System and Galveston County System did.

# 12005. Re: League City and Friendswood STAR-Net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-08-30 00:29:03 UTC
From: Myles
Topic: 11991  Message: 12005

Picking up several League City talkgroups listening to the Alvin site.
So far, have confirmed these talkgroups:
34096 LCPD
34352 LCFD?
34800 LCFD?

Just noticed that the STAR-Net site 22 from League City is up and
running also. They are using control channel 857.9875 MHz with an
alternate of 856.9875. The old 0D16 system is still running a
control channel on 859.9875 for the time being.
The complete list of frequencies licensed for the site are:
856.9875*
857.9875*
858.9875?
859.9875?
860.9875?
866.1625
866.4375*
867.7125
867.900*
868.375
868.600
868.750

I have confirmed use of the ones with the '*'.
I'm not sure if they plan to use the ones with the '?'. It would
make sense if they do since most sites run 10-15 channels on them.
I don't see any agencies outside of League City using the League City
site yet.

From: Jason Knutson
Topic: 11991  Message: 12006

Well this certainly explains what is going on. I was wondering why
there were new talkgroups tonight. Thanks for the info. I've heard
the talkgroups you mentioned as well as some brief conversation on
20560 but I couldn't tell who it was. Guess I'll be reprogramming my
scanner. I'll certainly be checking back here for any further information

Jason

From: Myles Barkman
Topic: 11991  Message: 12007

Catching some talkgroups in the 34xxx range.
34800 sounds like FD testing paging tones.
Just heard 34352 patched with 154.175 MHz.

Nope, the county doesn't even own the current GE radio system. Fat chance it will pony up for assimilation.

I think the M. Co. Hospital District is the operator. Since they're a "hospital district", they have taxing authority - similar to Hermann Hospital or a school district. What is Montgomery County's contractual obligation to MCHD? Am I correct these are separate entities and if so ... is M. Co. locked in on a lease or service contract for the mobile equipment?

Probably so.

From: Myles Barkman
Topic: 3963  Message: 12017

The old system is still running but so far, the only activity I notice on it
is the SCADA data on 858.9875 MHz using talkgroup 4816.
I will know more tomorrow as to if they are still using it for public works.
I see talkgroups from 33776-35120 and 41616-42192 coming up on the new
STAR-Net site.
The only other talkgroups noted on the site are 22096 which is Hobby Airport
Physical Plant Maint and 20560 which is the radio techs.
Private call has been noted on the system used by the techs. Probably no
League City folks are set up for it.

From: Myles Barkman
Topic: 12019  Message: 12019

Just noticed that Metro (the folks who brought us buses and trains), has a license for 488.400 MHz.
The repeater is only about 50 feet up, at the Metro Administration building downtown, and shows ten 4-watt mobiles.

I also see that Baytown FD has licensed 465.2625 for data for sixty-one 2-watt portables. The license says it is for use with SEMS Airpacks. A little checking with our friend Google and I came up with this:
http://www.scotthealthsafety.com/PDFs/QA_sems_6357_502.pdf
So it is a form of PASS system or as Houston FD calls it, "electronic accountability".
Don't know what Houston FD uses.

# 12028. Friendswood FD unit?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-09-03 18:27:35 UTC
From: Myles Barkman
Topic: 12028  Message: 12028

I didn't have the volume up high enough but some Friendswood unit came up on League City's 34352 FD talkgroup to do a radio check.
Friendswood FD units already have some talkgroups on STAR-Net but if their radios have gotten programmed with League City talkgroups now, maybe we will see a switch for more Friendswood agencies to STAR-Net soon.

I hear some law enforcement talkgroup on 33776 that I haven't been able to confirm. I believe it's part of League City though.

# 12031. emergency notification

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-09-04 04:41:02 UTC
From: Myles Barkman
Topic: 12031  Message: 12031

Thought some might find this service useful.
http://firstcall.net/

It is listed on several emergency management sites; some in southeast Texas
and some in other parts of the country.
http://www.gcoem.org/index.php?option=com_content&task=view&id=21&Itemid=45

There is no cost to the user except maybe using up some of your cell phone
minutes if you register your cell phone.

8976 - harris co dist 3 dispatch/ east/s,east of ship channel patched to 8496 some times
51168 - jail was 59984
53024 - data transfer was 61840
53024 - DOT Galv. co.ask to go digital
55200 - ??
14896 - hcso central ops/ info
50944 - ??
9008 - HCSO Dist 4 west and south west of HWY 290
52192 - water dept
55424 - ??
53088 - ??
51504 - Amb company
50768 - GCSO warrants - Ch 1
20752 - seabrook pd ch-1 { baytown }
54992 - amb company

# 12038. Marine Channel 22A 157.100mhz

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-09-05 23:02:32 UTC
From: Josh Kaufman/ KE5FGC
Topic: 12038  Message: 12038

Hearing some Comms, Very faint in sugar land. Could someone closer to Galveston see if they can hear better? They are giving out coordinates and other information.

# 12042. Amateur radio balloon

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-09-09 16:55:26 UTC
From: Myles Barkman
Topic: 12042  Message: 12042

Helium balloon launched from Wharton this morning.
Has crossband repeater on it 147.435 MHz uplink, 446.000 MHz downlink.
Also GPS APRS data downlink on 440.950 MHz.
Was launched at 11:06am this morning.
Typically takes an hour and a half to go up and 30 minutes going down.
More info here:
http://www.qsl.net/w5acm/b22.html

From: Scott Royall
Topic: 3129  Message: 12052

Do people really not get how trunking works? There aren't different control channels in the manner you describe. True, listening to the League City site should give you the Seabrook stuff, but probably not all the time. I'm certain that some Seabrook caca pops up on the Alvin, Texas City, Galveston, Hartman Bridge, and even Downtown Houston sites. The transmitting radio shops around for the best signal unless it has been told not to.

Ever since Pasadena joined StarNet they have been using 868.8625 as their primary control channel. The backup control channel listed is 868.6125. That is all you should need for Pasadena, Pasadena ISD, Deer Park, and South Houston.

Niko

That would probably explain the "Close Call" hit as I was driving
through Wharton at around 1:00am on 163.8375 DES.
BTW, BCT15, Nil-Jon Super M and Close Call are an awesome combination.

I know the Game Warden has talkgroups on STAR-Net, wouldn't be surprised if regular P&W did too.
They still have VHF simplex and repeater channels around town but I'm not sure how much they are used.
I'm not even sure I have them in my scanner.

# 12058. tropical weather

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-09-17 15:50:27 UTC
From: Myles Barkman
Topic: 12058  Message: 12058

Prepare for some tropical rains.
This time it's from the Pacific, not the Gulf.
The remnants of Hurricane Lane which hit the west coast of Mexico near
Culiacan and tore down some flimsy houses and washed away roads.
You can clearly see the core of what was left of Lane crossing south Texas
coming this way in this Infrared satellite loop:
http://adds.aviationweather.gov/satellite/displaySat.php?region=AUS&isingle=mult_big&itype
=ir
Houston is to the right and down from the center of the graphic. You can
clearly see the bay along the coast.
Some rain is crossing the Houston area in advance of the main part of the
storm which is blowing through now.
Expect bands of rain throughout the day.
The heavy rain should be over the Houston area tonight and into Monday
morning. Expect at least a couple inches of rain.
Don't rule out the possibility of a tornado or microburst.

I just tuned in to the weather channel and they are issuing flood
advisories for central texas,so its only a matter time before our
advisories will be issued.actually this significant rain event is
the result of an approaching cold front in combination with the jet
stream pulling in the moisture from hurricane lane.it could be high
water rescue time by the morning.

Subject: [HoustonScan] tropical weather

Prepare for some tropical rains.
This time it's from the Pacific, not the Gulf.
The remnants of Hurricane Lane which hit the west coast of Mexico near
Culiacan and tore down some flimsy houses and washed away roads.
You can clearly see the core of what was left of Lane crossing south Texas
coming this way in this Infrared satellite loop:
http://adds.
<http://adds.aviationweather.gov/satellite/displaySat.php?region=AUS&isingle
=mult_big&itype=ir>
aviationweather.gov/satellite/displaySat.php?region=AUS&isingle=mult_big&ity
pe=ir
Houston is to the right and down from the center of the graphic. You can
clearly see the bay along the coast.
Some rain is crossing the Houston area in advance of the main part of the
storm which is blowing through now.
Expect bands of rain throughout the day.
The heavy rain should be over the Houston area tonight and into Monday
morning. Expect at least a couple inches of rain.
Don't rule out the possibility of a tornado or microburst.

Did you notice the compass rose in the upper-left corner? You can use that to walk NWS radars to Alaska if you wants.

Gotta love Yahoo and their delayed emails. Don't know about the rest of you but I didn't see my own email until 2 hours after I posted that. By then, I had done some more checking around and found that I was flawed about that mass of rain in STX being the "core" of Lane moving this way. Now that mass is gone but the cold front is approaching.
Flood Watch from Midnight until Monday morning for the SE TX area.
From the satellite loops, almost appears to be a lone right-moving supercell along the front south of the Big Bend.
Our biggest threat will be flooding. The morning commute will be somewhere between treacherous to impossible.
Wish I had a M35A2, deuce-and-a-half, but they're not too fast and I couldn't afford to keep it filled with gas.

Date: 2006-09-21 16:54:17 UTC
From: Stephen
Topic: 12077  Message: 12077

It seems like the Galveston STAR-Net site has changed its primary control channel from 868.6625 to 868.9125. This was the control channel used on the old Galveston County System. Here are some of the other frequencies for this site. I am not sure if the list is complete.

866.1625
866.4375
866.8000
866.8375
866.8750
866.9625
867.3125
867.7125
868.4625
868.6000
868.9125c1

154.400 is the input to the primary repeater on 154.130 MHz. Were they using a different PL or no PL?
I would not imagine that they would use the input to the repeater for that sort of operation due to potential for interference.
Perhaps you were just hearing the input side of the repeater. I've heard them say to switch to another frequency while on scene.

For channel 4, I would check 154.280 MHz. Most Departments that are
still on VHF use ch 4 for the VHF mutual aid channel.

My guess would be a permanent dispatcher, dispatching.
Citywide is often off line for special events, SWAT, chases, etc.,
which would interfere with interagency comms.

NARC-2 is 45776

I know the head of narcotic for fort bend county, and he only
mentioned one channel on the 800 system, plus he says they have
"other" radios they use.

Subject: Texas Roadhouse

Just in case any of you haven't seen this (I haven't
seen it on the list), here is the "nutshell" version:
Texas Roadhouse, a Kentucky-owned restaurant chain,
recently complained about money lost
because two officers were killed in front of one of
their restaurants, causing local police to investigate
the homicides... and a Texas Roadhouse manager
requested compensation for business lost due to the
fatal shooting of two police officers.

Yes, I've checked it out on Snopes, it comes up as
true, with good links.

http://www.snopes.com/politics/business/roadhouse.asp

The original account comes from this web site and
reads as follows:

http://www.bernsteincrisismanagement.com/nl/crisismgr060901.html#cmu

Texas Roadhouse Makes Police Sick
A How to Do It Completely Wrong Crisis Case Study By Jonathan Bernstein

In May 2006, Fairfax, VA Police Detective Vicki Armel and Master Police Officer Michael Garbarino became the departments' first two officers killed on duty. They were gunned down by an assault weapon-wielding madman who was subsequently shot by police. There was, of course, the expected shock and mourning by their fellow officers and citizens of the communities they served. Officer Garbarino lingered near death in the hospital for almost two weeks, resulting in two separate funeral processions and ceremonies.

However, there was another, much lesser, but still sickening shock to come the following month, behavior which reflects the very worst of corporate communications.

In mid-June, the department's False Alarm Reduction Unit received a letter from their local Texas Roadhouse restaurant, which is located just down from the station, appealing a number of false alarm fines. The restaurant had tripped numerous false alarms, apparently as a result of wiring issues and problems with their alarm company. All of these problems and accumulated fines occurred prior to the date of the police shootings. FYI, Texas Roadhouse (www.texasroadhouse.com) is a national chain that boasts about their Legendary Food, Legendary Service(r). What does this have to do with the shootings? Read on.

In asking for the a waiver of the fines, the unbelievably insensitive letter pointed out that the restaurant had lost over $5,000 in sales the night of the shooting and $4,000 in sales during each funeral procession in the two weeks that followed. Police sources found this very hard to believe, as the intersection by the restaurant was closed for only about an hour during each funeral procession, and in the middle of the afternoon, not during the lunch or dinner rush.

The letter went on to say that the restaurant had taken some food to the shooting incident command post and also noted that they give officers a discount when they eat in the restaurant (something many officers deny). The letter informed the department of the "major financial impact" the funeral events allegedly

had on their store, asking for a re-examination of the false alarm fines based on those "facts."

A senior police official contacted the corporate office for Texas Roadhouse in Kentucky and relayed her concern. She emphasized that at the same time OTHER local businesses were holding fund raisers for the fallen officers, their local restaurant was looking to use the incident as an excuse not to pay their fines. Although each store is individually owned, the corporate office appeared very concerned and asked that the letter be faxed to them, which it was, and the police official was told that "someone would be in touch."

A week passed. A call came in to the police official from Texas Roadhouse's managing partner for the State of Virginia, who was going out of town for three days, but would "contact her when he returned."

Three weeks passed. The persistent police official contacted the corporate office yet again. Instead of escalating this to a senior corporate officer at this point, as they should have, they had Roadhouse's managing partner for Virginia call again to apologize on the restaurant's behalf.

The owner of the local store, who wrote the letter, never contacted the department to express his regrets in any way.

Your author has a "Deep Cop" contact who passed this information on to him, including this message sent by a police officer to Texas Roadhouse via the contact page on their website, at http://www.texasroadhouse.com/contact_us.php.

It has come to my attention that I owe your establishment an apology. I am an officer with Fairfax County. Earlier this year, I had the unfortunate experience of listening as two of my co-workers died of gunshot wounds near your restaurant. The ensuing investigation, regrettably, blocked (from your account) thousands of dollars worth of hungry citizens from eating that night. I compounded this problem by participating in a funeral procession, not once but TWICE, for my co-workers and again blocked thousands of dollars worth of business from you. I humbly apologize for such egregious actions on my part and will endeavor to, in the future and to what extent I can, not allow petty police actions from interrupting your business. I

have asked all my co-workers to heed this and next time pick a more commercially advantageous spot to be ambushed and killed. If anything, I have requested that they all die at once, such that multiple funeral processions will not be necessary. In an effort to make sure that I am effective in my efforts, I have barred myself, and all those I can influence from entering or even parking in your establishment. This way I can be sure that my presence will not have the same selfish and undesired affect. If there is anything else that I can do to make sure your establishment has a banner year, please feel free to contact me. I will forward this message to all concerned parties.

I am told that his sentiment is shared by most, if not all members of the department.

Oh yes, and the False Alarm Unit was told to instruct the restaurant to pay their fines.

Horrible letter. Slow and grossly inadequate corporate response. Maybe they should modify their slogan to Legendary Food, Legendary Service, Legendary Insensitivity?
**********

I, for one, will be glad to help Texas Roadhouse avoid any such future tragedies by making sure I or nobody I know goes anywhere near one, lest some ill fate befall them and cause Texas Roadhouse to complain.

For the people who are not on the hou_disp email group, I apologize you are getting this. The Hou_Disp group is there to send out actual emergencies in and around the Houston area. The Hou_Disp email group is not a place for emails like this. If you feel the necessity, check with the moderator or owner of Houston Scan and make sure he doesn't have a problem with you sending garbage like this on his list. We send real, live time incidents once we have established that the incident is working.

As much as I am going to contradict myself, I would highly suggest that you check your sources before sending out an email like this. You must be responsible when sending out mass emails such as the one you did as it is a horrible disservice to everyone.

This is from another email list that I belong to. Please read all of this. If you feel the need to reply to me, please do so off of my hou_disp email list. My subscribers don't really need to see this stuff.

Erich Burrer
Houston, TX
List Owner - Hou_Disp

Subject: Texas Roadhouse
Importance: High
Mr. Spencer,
Thanks for your e-mail concerning the incident in Chantilly . Let me assure you that our company is truly upset at this horrible situation, and we certainly did not take it lightly. Also, I want to give you an update, as there is some misinformation and very dated information being circulated, especially including the article that was attached to your e-mail.

First of all, I want to pass along my apologies on behalf of Texas Roadhouse and assure you that what occurred in Chantilly in no way represents our company's attitude towards law enforcement or emergency personnel. For example, in Illinois , we have held Officer Nights in which we feed police officers and their families

for free. In Indianapolis , we have awarded Policeman and Detective of the month for many years, and in Louisville , Ky. our company created a foundation for the Louisville Metro Police in order to fill gaps in the budget. To date, we have raised more than $3 million. These are just a few examples of our support of law enforcement across the nation.

The article that you attached does not contain all of the facts or the latest information as the author never called our company to see if we had responded, which we had. If he had bothered to call, he would have learned that our CEO, who is the son of a retired Virginia Police Officer, had already spoken with Captain Susan Culin of the Fairfax County Police Department and apologized. She also received a letter of apology the very next day. In addition, our company made a donation to a trust fund in the name of the fallen officers. The article makes no mention of this despite the fact that it had taken place before he wrote and distributed his newsletter.

Also, the manager of the restaurant also met with Captain Culin and apologized. He followed-up with a written apology the next day. Also, not mentioned.

Also, while we are not allowed to discuss the details of our disciplinary actions against employees, I can tell you that the individual who sent that letter no longer works at the restaurant, which is not mentioned on the author's Web site, Blog or in any of his newsletters.

In addition, I personally spoke with Captain Culin, who mentioned in the article that you read, of the Fairfax County Police Department on Friday, September 8, and she relayed to me that she felt that the issue had been resolved to her satisfaction. She also sent out a follow-up e-mail to all Fairfax County Police Department personnel stating that she felt that this situation had been dealt with appropriately. In her letter, Captain Culin states that her issue was with one individual and not the entire company or other Texas Roadhouse locations and she certainly never endorsed a boycott of Chantilly or other locations. Captain Culin reiterated this to me again Friday on the phone. I would be happy to send you a copy of the e-mail if you would like to review it. Captain Culin can be reached at 703-814-7000.

Also, Captain Culin sent an e-mail to the author of the article that you read telling him she was satisfied with our response and to "stop stirring the pot." The author refused to post on his Web site, his Blog or in his subsequent newsletter. I have pasted that e-mail below for your review. Again, feel free to call Captain Culin to confirm the validity of the e-mail that she sent to Mr. Bernstein.

Please don't hesitate to contact me if you have any additional questions. Again, while I can understand you and your fellow officer's anger, I hope that you will not judge us all based upon the actions of one individual, who no longer works there, and a very one-sided article that does not include all the facts.

I apologize for the lengthy e-mail, but I wanted to make sure that you had all of the facts in this situation, that the author has conveniently ignored despite pleas from our company and Captain Culin. Please see Captain Culin's e-mail to the author of the newsletter below.

Travis Doster
Texas Roadhouse

Mr. Bernstein,

I has come to my attention that you have either forwarded or summarized, in a newsletter, an email I sent out to my officers regarding Texas Roadhouse and a letter I received about false alarm fines at the local, Chantilly restaurant.

For the record I would like to advise you that Texas Roadhouse has taken a number of steps to correct this unfortunate situation. The CEO, Mr. GJ Hart, has personally reached out to me to apologize, both during a phone call and in correspondence that followed, as well as sent a very generous donation to the family funds for our fallen officers. Mr. Rainwater, the managing partner of the Chantilly restaurant, met with me in person and also offered his very sincere apologies. Texas Roadhouse has let me know that Mr. Rainwater is no longer employed by the corporation.

The Fairfax County Police Department is satisfied with the response we received from Texas Roadhouse once this matter came to light. We would like to put the matter to rest and work on growing our relationships with the business community. Continuing to put out email that does not include the entire story is only serving to "stir the pot" so to speak. At no time did I ask for or promote any type of boycott of Texas Roadhouse. This incident was the result of very poor judgment on one individual's part, who is no longer at the restaurant, and to damage the reputation or business of other restaurant locations is simply not fair.

I would like to ask that you also put this matter to rest. Should you send out any further information about this incident, I would request that you include the entire story to include the steps Texas Roadhouse has taken to right this matter, as detailed above.

Thank you,

Captain Susan Culin

Subject: Texas Roadhouse
Importance: High
Mr. Spencer,
Thanks for your e-mail concerning the incident in Chantilly . Let me assure you that our company is truly upset at this horrible situation, and we certainly did not take it lightly. Also, I want to give you an update, as there is some misinformation and very dated information being circulated, especially including the article that was attached to your e-mail.

First of all, I want to pass along my apologies on behalf of Texas Roadhouse and assure you that what occurred in Chantilly in no way represents our company's attitude towards law enforcement or emergency personnel. For example, in Illinois , we have held Officer Nights in which we feed police officers and their families for free. In Indianapolis , we have awarded Policeman and Detective of the month for many years, and in Louisville , Ky. our company created a foundation for the Louisville Metro Police in order to fill gaps in the budget. To date, we have raised more than $3 million. These are just a few examples of our support of

law enforcement across the nation.

The article that you attached does not contain all of the facts or the latest information as the author never called our company to see if we had responded, which we had. If he had bothered to call, he would have learned that our CEO, who is the son of a retired Virginia Police Officer, had already spoken with Captain Susan Culin of the Fairfax County Police Department and apologized. She also received a letter of apology the very next day. In addition, our company made a donation to a trust fund in the name of the fallen officers. The article makes no mention of this despite the fact that it had taken place before he wrote and distributed his newsletter.

Also, the manager of the restaurant also met with Captain Culin and apologized. He followed-up with a written apology the next day. Also, not mentioned.

Apparently it was a true incident. But I believe the blame should be directed to Eric Rainwater, the Manager of the restaurant. This was an isolated incident and I do not believe reflects the views and opinions of the restaurant chain.
To ask people to boycott the chain seems a bit extreme. The manager made a bad decision, got fired, and will have to live with the stigma of being insensitive to the police for the rest of his life. How will boycotting the restaurant chain solve any problems?
I have no personal interest or investment in Texas Roadhouse.
That's about the extent of the discussion I see fit for this topic as Erich has stated, it is beyond the scope of the purpose of this group.

Heard someone traveling around with a stuck mic on 460.025 a while ago.
Been listening to the input to see if they were near me.
Now I hear 74-Fox trying to call dispatch on there and he is not coming
through the repeater and the dispatcher is not replying.
So either they shut the repeater off or it died.
I hadn't been listening to the output (was too irritating) to know if they
switched to another channel as a backup.
Is there a plan in place to use B3 or Citywide in case of a repeater
failure?

Also, the corporate office has made many generous donations on behalf of the fallen officers. According to several sources, Snopes really doesn't present both sides of the story. The blame falls entirely on the manager, and it is an atrocity on his part that I think he will find following him the rest of his life. Texas Roadhouse as a corporation is not to blame for the guy's insensitivity.

A Borgnet user must have a radio tuned to HPD-1, or the link is not made, thus, no retransmission of HPD comms.

Looks like gremlins got ahold of the Texas City site. It is flat out broke.
From the sound of the chatter, someone was updating some firmware on the
Texas City site and it killed it. He was about to head to Galveston to do
the same thing when someone told him that Texas City was down.
That would have been a mess if he made it down there.
For now, it shouldn't be affecting too many folks with Alvin, League City
and Freeport taking up the slack.
For now, you might notice more activity on those other sites.
Someone is headed to the Texas City site now to try to get everything back
online.

# 12121. Spring ISD TG 15952

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-04 13:54:23 UTC
From: bpckty1
Topic: 12121  Message: 12121

I've been hearing comm checks this morning on TG 15952, with the dispatcher answering various units as Spring ISD.

# 12122. Update: Spring ISD TG 15952

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-04 14:01:14 UTC
From: bpckty1
Topic: 12121  Message: 12122

Schools are now checking in using "Crisis Radio Check" with their identification.

# 12124. Re: [HoustonScan] Texas City STAR-Net

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-04 23:02:54 UTC
From: Kevin Chessher
Topic: 12115  Message: 12124

Maybe I should have phrased this so it didn't sound so rude. I heard
them discussing the Texas City problem here, obviously I don't know
where Myles heard it. That's what working 18 hours will get you. Sorry
if I sounded rude.

on the topic of ISDs, I have verified that 44912 is FBISD PD's Channel 4 also called Secure. Not sure why it is called secure because it has zero security.

Thanx.

I've had the talkgroup in the scanner for 3 years suspecting it might be a SISD tg from some comms I heard at that time, but no activity at all until this morning. I guess they finally had enough $$$ to provide all schools with Borgnet radios. And, today, they were turning them on and testing them.

That seems to be a term from several years ago. Many users on the Missouri City TRS were calling their Ch 4 "Secure", although they weren't. Go figure...

# 12129. Need advice on new scanner for Houston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-05 16:04:27 UTC
From: Charles Beall
Topic: 12129  Message: 12129

Having listened to scanners reguarly for almost 20 years, I have not listened as much in the past couple of years. I would like a new scanner. If mobile I am debating between the Uniden 396T or 246T or base will get the 996T. My current setup is a 780XLT base and 245XLT mobile. I listen mostly to HPD and StarNet. Here are a few questions:

1) I want a scanner that will allow flash reprogramming when the 800Mhz Nextel rebanding occurs, right? All of the above have it. My current scanners do not.

2) How important is APCO25/Astro25 right now? Will StarNet go to it? It would rule out the 246T, but it is only 40% of the price of the 396T.

3) How does the trunking compare on the scanners? My 780XLT far outperforms the 245XLT regardless of the antenna. Is this a difference bewteen TrunkTracker II on the 245XLT and TrunkTracker III on the 780XLT? Is TrunkTracker IV better than TrunkTracker III or does it just add APCO25?

My attraction to the new scanners is the dynamic memory. I am leaning toward a mobile since my 246 performs so poorly compared with the 780.

Thanks
Charles Beall

As of right now I don't think STAR-Net is going to turn digital until maybe 5 years down the road. Although DPS is supposed to be turning digital (conventional, not trunked) this December. You will have to have a digital scanner to listen to DPS if they do turn digital. As for rebanding, as of right now most scanner companies are in the dark as to what the new LCN plan from Motorola is going to be, so as of right now (based on the FCC LCN plan), the BC 246 and 396 can be reflashed after rebanding. I am uncertain about the RS brands, but I think the 96 can be reflashed while the 97 may have to be shipped to Fort Worth. The digital radios have a better front end, which makes them receive better. If you need any more info, or any has any corrections to make to this info, please ask or correct me!

OK, Thanks Yall, I will stop trying the links. So for now both audio links are dead!!!!!

I did like listening to them if anyone knows the operators personally I know people liked listening to them.

Hint Hint

Thanks
Mike

# 12140. City of Houston Public Safety Radio System

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-07 14:11:34 UTC
From: parkstreetmafia@houston.rr.com
Topic: 12140  Message: 12140

I saw an article in the Houston Chronicle last week talking about the city's upcoming bond election in November. One of the propositions reads as follows:

"PROPOSITION B - The issuance of $135,000,000 police and fire improvement bonds and the levying of taxes sufficient for the payment thereof, without limitation of such levy by any provision of the home rule charter of the City of Houston, Texas."

The article stated that some of this money would be used to upgrade the police and fire communications system. A little digging on the City of Houston website found this item on the page http://www.houstontx.gov/it/techinit.html

"Begin the replacement of the Pubic Safety Radio Systems for Police and Fire with a financial plan and procurement process to be implemented during FY07."

Anyone have any ideas what sort of system they are going to? Is this a complete overhaul or just an incremental upgrade?

So,

Houston will be in the forefront again, re-inventing the wheel?
I wonder if they will use their vast (LPB inspired?) experiences with the Emergency Operations Center, the Houston Fire Department dispatching system, and the Houston Police Department Dispatching Center of the 1990s as templates to create a quality system?

> This is probably for the city's 700 MHz radio project. The city wants to consolidate police, fire/EMS and public works on a new 700 MHz system. This has been in the Capital Improvement Plan budget for several years at least but has had no funding source identified in the past. The 2007-2011 CIP funding for the radio system includes a $126 million "Proposed Homeland Security Grant" spread over FY2008-FY2011, which happens to be about the same amount as the Proposition B bond issue.

True, but it will give enthusiasts a place to start. Some
frequencies tend to remain the same, such as the tower, ground, base
(fire-rescue use after Tora Tora Tora), and amateur radio
frequencies. Others will be in the same general business band area,
but specifics are not known until they set up their stands. and as
stated, WoH radios (air and employees/volunteers) aren't usually
known until the day before.

I just hope that they don't ramp up their security measures to
include scanners and comfort items.

700 MHz. Scheduled to be up and running by 2013. Since the funding is just
now (possibly) being identified I'm not convinced of that time frame.

This is the reply I sent out at 10:42 this morning. Will probably
see it again later. Sending this straight from the Yahoo Groups site.
---------
The frequencies tend to change from year-to-year.
Here is what was used last year:
http://home.houston.rr.com/freqzone/freqs/woh.html
I've kept a running list of what had been used in years past and
lately,
they keep changing the frequencies.
They use loaner radios from a communications business. When they get
close
to show time, the shop grabs however many radios are needed for the
event.
Different sets of loaner radios have different sets of frequencies
programmed into them.
You never know what set they are going to wind up with.
So any given year, they may wind up with a similar set of frequencies
used
in a past show. That's why I keep a running list.
I don't know how many sets of radios the shop has and they might even
reprogram the frequencies so that they are never the same.
I usually get an insider's help as to what frequencies are in the
radios
each year so keep checking the list here and I should post something
a
couple of days before the show.

Similar story with the airboss frequency as far as it staying
constant. It
can change from year-to-year as well.

The Ellington Field frequencies themselves should be OK. But if you
want to
hear the Air National Guard comms, you will need a scanner that can
decode
P25 digital modulation.

FYI, here is the webpage for Wings Over Houston.
http://www.wingsoverhouston.com/

The are running the third weekend of October, the 21-22. The main attraction will be the USAF Thunderbirds Team.
I'll update the WOH frequency page to include known frequencies used by the
Thunderbirds later.

This is true. I begin to realize when I drag my radios somewhere, especially to an airshow, that I miss out on some of the displays, performances and picture-taking because I get so wrapped up in looking for new freqs or listening to the known ones.
When it's all over, I may have found a couple of new frequencies, which may or may not be used again, but I missed out on so much of the event itself. Especially true when you are with family and/or friends.

Might be good to have when something happens and you want to know what is going on but otherwise, keep it's use to a minimum or life will pass you by.

The answer depends on what you want to listen to. But, as a quick overview to get the ball rolling, here are the major public safety groups. (Yes, I know I am leaving many out, so I will let everybody respond.)

Houston Police - Conventional frequencies mostly 460.xxx on repeater side

Houston Fire/EMS - Conventional frequencies mostly 453.xxx, 460.xxx, and 462.xxx

Most agencies are now on the Starnet systems which is a Type II Motorola trunked system covering five counties including Harris county. There are ~24 sites with the downtown one being the broadest signal.

There are also City of Houston, HISD, and CenterPoint trunk systems but have less activity or less interesting activity.

For frequencies, I most often use two sources:

1) KG5AI Myles Barkman's site

http://home.houston.rr.com/freqzone/freqs/freqs.html

2) RadioReference.com

http://www.radioreference.com/modules.php?name=RR&ctid=2623

Good luck!

Charles

# 12166. pasadena apt fire

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-11 02:26:37 UTC
From: Myles Barkman
Topic: 12166  Message: 12166

2-alarm fire in apartment 2701 Perez in Pasadena.
Having problems finding the fire with all the smoke. Trying to ventilate
the structure.
This appears to be Garden Villa apartments.

From: scanfan02
Topic: 12160  Message: 12167

In your area, the SO will be District 4 there is also constable Precinct 5 (all on STAR-Net). Fire and EMS will be Cy-Fair VFD (conventional dispatch on 453.6/157.45).

> I am not sure of the area. I can recognize downtown but am not sure of Sheriff, Cy-Fair, NW and West Houston. Do they used the trunk system? I have found a list from the group but I guess you need to know the city pretty good. Wow I can't believe how many municipallies there are in the Houston area. Some of the things I call "hot" is like SWAT and Drug Inforcement. Sometime I will hear something and they will switch to tac 1 or 2 and I lose them. Can you help Thanks Robert

# 12168. bootleg TG on Houston trunk?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-13 00:25:31 UTC
From: Myles Barkman
Topic: 12168  Message: 12168

Can anyone remember what talkgroup I heard a few years ago on the City of Houston trunk system that sounded like some bootleggers (possibly wrecker drivers)? I just checked my old BC235 and noticed I had 6096 programmed in there so that might be it.
I ran my logger for a little while on the system to catch some activity on the COH trunk when the EOC talkgroup 32944 was being used and TG 8160 was logged between 4:30 and 6:30pm.
That TG number is askew from the normal talkgroup numbers used on the system and the radio ID (8737) is also not a typical ID I see used on the system. Might keep an eye (and ear) on that one and see what I hear on it.

# 12171. Sugar Land Methodist Hospital (w/quick reference to Katy ISD)

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-14 17:26:58 UTC
From: bpckty1
Topic: 12171  Message: 12171

Recently, I spent a few days visiting a relative at the Sugar Land Methodist Hospital. To help pass the time, (you cannot accompany the patient to the exam/proceedure testing, so much free time was available in the room) I attempted to capture some of their comms. Some I knew were digital and outside the reach of my scanners (the "electronic leashes" used by the nurses and doctors to communicate, for example), but several employees had regular type radios. I was not able to see the make and model (security, for example wears suits, and the users used earpieces and collar type microphones, but they appeared to be the same type of Motorala radios that are now in use at Katy ISD Rhodes Stadium [another quest]. The Sugar Land PD Borgnet Batwing TRS radios are already known.) Other users kept their larger radios in their lab coat/scrub top pockets, except for occasional use.

The only FCC information I could find is:
METHODIST COMMUNITY HEALTH CARE CENTERS
WPLZ970
462.7500
Emission Sequence
1 20K0F1D
2 20K0F2D
3 20K0F3E

I did not copy any transmissions on this frequency. Close call was not useful either.

I put the Methodist Hospital's (Medical Center) LTR in my scanner, and heard nothing, except the occasional Medical Center related use.

Has anyone from the Sugar Land area had any luck monitoring the SL Methodist Hospital?

# 12175. 146.840 repeater

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-15 01:31:02 UTC
From: Myles Barkman
Topic: 12175  Message: 12175

Anyone know where the 146.840 MHz repeater is now or know the latest news?
It used to be the primary repeater for hams to use in Houston to report severe weather reports to the National Weather Service years ago. Being downtown, it had some problems with receiver sensitivity with all the other transmitters up there.
On top of that, it developed a transmitter problem that made it very difficult to receive.
Now the Skywarn nets are carried on the Saltgrass link system which works well for the Weather Service since it can cover many of the counties in it's warning area.
Now the old 146.840 repeater appears to be back on the air with a good signal (from Pasadena anyway).
I can even hit it with 1/2 a watt on an HT in the house.
Anyone know some more info on it?

# 12181. HPD Radio Channels

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-15 22:01:42 UTC
From: bpckty1
Topic: 12181  Message: 12181

Has there been a restructuring of the HPD radio scheme?

This morning I heard HPD units along the Katy Freeway assisting the construction crews opening and closing the ramps as the new concrete was opened to traffic. They were on 460.4000, which I thought was for CID and related activities.

they were also using that frequency last weekend for the same thing.i
think their just using it for the construction because it's not being
used at that time and also it is considered a tactical channel.i don't
believe there has been a restructing.you will occasionally hear non
crime related activities on the other tactical channels,especially
during festivals and parades.

# 12183. Re: HPD Radio Channels

I noticed that last week, too, but I couldn't place what was happening. But, since B-4 has gone repeater and encrypted, B-9 has had a very interesting month. I have heard a type of encryption, guarding construction crews, wants/wanted/dl checks. Something more than using it as a TAC channel seems to be happening.

Steve, can you provide some insight?

There was always a repeater on B4 (460.075 / 465.075) but it was encrypted.
The radios drop the encryption key if th ebattery gets changed or goes dead
so it wasn't very useful. A lot of people programmed radios on the output
side and just used them simplex. It was very common to hear aircraft
surveillance on this channel. They finally took the encryption off (since nobody was
using it anyway) and I don't think it has an official use now. It was being used
for some of the SW overtime for awhile, and people who know it's there use it
for whatever they need it for.

B-9 has > had a very interesting month. I have heard a type of encryption,
> guarding construction crews, wants/wanted/dl checks. Something more
> than using it as a TAC channel seems to be happening.
>
> Steve, can you provide some insight?

I suspect this is being used for the new overtime program for traffic
control on the Katy Fwy. It is supposed to be used by Vice, Narcotics, and CID,
but they are off on weekends and that's when most of the construction is going
on so they can easily share it without bumping in to each other.

It is very common to find a channel that works and just use it. There has
never been any training on what the different channels are for or who is
"supposed" to use them so you just find one that works and use it 'til someone
starts griping, then you argue with them for awhile....

I remember the repeater back in the early to mid 1990s.
If I recall correctly, one of the reasons the repeater was "silenced"
was because it interfered with Beaumont PD F-4, Dispatch.

Nope, no Astros and no encryption. The majority of the radios are the plain old Sabers that we got in 1990 (3 orange buttons). There were a few Astros floating around but no digital or encryption being used. SWAT had 2 to test and set them to just plain digital mode but hated them and tossed them.

I'm going to venture a guess and say that you guys are using Astro Sabers for the crypto stuff. If that's the case (and this may not be too conducive to your operations, but it is available), they can be programmed for "infinite key retention", which will hold the key for several minutes if power is lost.

From: bpckty1
Topic: 12181  Message: 12191

Further research, from the "dusty Archives", AKA/ Police Call V-7, 1990 Edition:

Houston Police
South Central 460.0750 KKD490 KG3359
465.0750 KKQ982 KG3359

Beaumont Police
Dispatch F-4 460.0750 KUY501
465.0750 KQ7756

So, South Central Dispatch was changed to 460.5500 since (I presume) the closest users were McLennan County, Nacogdoches FD, Ft. Worth FD and PD, and San Antonio EMS and were not intefered with as often as Beaumont PD. And, in the days before PL decoders for scanners, I remember listening to Beaumont PD at night when the conditions were right.

Maybe when it was Smartnet, but not today's Smartzone.

I'm not being a pessimist, but I have been told that the illegal transmitting could only occur if one completely clones a user's radio and imitate that radio to access Borgnet. But, since each radio's personality is unique, that would be next to impossible. A Kenwood would be recognized as a trespasser and shut down or kept open when one thinks it is not transmitting. Ditto for a cloned Batwing radio. A cloned Batwing may succeed once or twice, but the system would recognize when the interloper is used outside of the normal geographic areas and times the radio is normally used. An example of this would be a Constable 4 radio used in Clear Lake at the same time it is being used in Spring and transmitting on a Webster talkgroup, which would normally not be on a C4 radio. So, if one puts unauthorized talkgroups in the radio, it will become a paperweight almost immediately.

Plus, the user should expect a visit from a deputy US Marshal. Ask a certain radio company about this.

# 12194. sheriff's department on 866.5125

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-18 00:56:38 UTC
From: Myles Barkman
Topic: 12194  Message: 12194

Calcasieu Parish in Louisiana (Lake Charles/Vinton/Sulphur) is using
866.5125 MHz for their primary ops for some reason.
They are making it into some of the local repeaters which is how I can hear
them.
I heard them make an announcement about using ITAC1 and ITAC4 but I think
they call the freqs something different than we do here. I think for them,
ITAC1 is 866.5125 MHz and ITAC4 is 868.0125 MHz.
You can even hear some of the mobiles making it into local repeaters. I
think the one I hear them getting into is here in Pasadena.
RadioReference shows CP using an analog 800 MHz SmartNet system.
Sulphur, Lake Charles and the County all have their own trunk systems. I
guess neither is set up to use another's system as a backup.

Good evening,

Im pretty new to the group, I live in Lake Charles Louisiana. I just read some emails relating to sheriffs office in Calcasieu Parish. I just heard them go back to the normal operations and do a roll call. Sometimes they have radio problems and they switch to the mutual aid channels (itacs) etc.

From: Myles Barkman
Topic: 12196  Message: 12200

I hit a few of the Harlingen ham repeaters on VHF earlier.
146.960 k5dg was coming in full scale like it was a local repeater.
Guess I should be listening for P25 DPS traffic since we don't have it here yet and I want to see how it sounds before we get it.
As I've posted before, you can check this link out to get a quick idea about where the band is open on VHF based on packet stations heard.
You have to refresh the page manually.
http://www.mountainlake.k12.mn.us/ham/aprs/path.cgi?map=na
Mostly along the entire Texas Coastline, East Texas and into Louisiana.

# 12201. Re: [HoustonScan] VHF Skip (and 851-869!!)

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-18 13:38:07 UTC
From: navscanmaster@aol.com
Topic: 12201  Message: 12201

If you think that is fun, try sitting with a Pro96 on the ground level in Navasota and pulling in all Starnet sites from 1-24 with a 90% decode rate on all! Not to mention Shreveport TRS, State of LA, Richardson, Lewisville, Tarrant CO, American L&P in south Texas, and many others I didn't even bother to record. Local Entergy control channels were being blown right out of the water by heavily accented Hispanic workers, still speaking in English, though. I had one channel, 855.0875 that couldn't make up its mind what system it wanted to be as it bounced between three system ID's.

The city of Texas City is on the STAR-Net Multi-Site Trunk System.
Here are the primary Talkgroup ID's for Texas City PD, Fire, EMS:

DEC Description
54896 Texas City PD
55184 Texas City Fire
55216 Texas City EMS

For more information on the STAR-Net system go to the following
links below.

http://www.radioreference.com/modules.php?name=RR&sid=38

Date: 2006-10-18 21:12:24 UTC
From: Myles
Topic: 12208  Message: 12208

I can't tell which site is bad but folks using one of the sites,
probably
southeast (Pasadena, Pearland, Alvin) have terrible audio.
Think I heard this problem a couple of days ago but thought it was a
particular mobile or portable radio.
There are quite a few users you can hear with the distorted audio.
Some users are Port Authority, Santa Fe PD, Clear Creek ISD, La Porte
PD,
Galveston FD.
Perhaps it is something other than a particular site but instead some
sort
of link (phone line?) between sites.

Myles

Yes this has been reported to them. I know for a fact that audio leaving the Missouri City and Texas City site is distorted. So basically if listen to Stafford PD (for example) on the Downtown site, the units serving off of Mo City may sound distorted, but if you listen to them on Mo City they sound good. So the link idea is a good guess.

I hear the techs talking about the problem on several different talkgroups.
Harris County techs are using 20560 and the Galveston County techs are using
53264.
They are also using private call.
Seems to come and go. Sounds OK now.
They were talking about the Galveston and Texas City sites.

Date: 2006-10-19 02:41:38 UTC
From: Michael W. Jones
Topic: 12205  Message: 12214

I have uploaded my ARC396 compatible files to:
<http://www.otsc.com/~mjones/HoustonARC396.zip>
http://www.otsc.com/~mjones/HoustonARC396.zip

Of course it requires ARC396, which personally is much better than the Uniden program.

Subject: [HoustonScan] BCD396T Data file for Houston ?

I have a friend asking for a BCD396T data file for Houston. Could someone post one into the files section:
http://groups. <http://groups.yahoo.com/group/HoustonScan/files/>
yahoo.com/group/HoustonScan/files/
or perhaps forward one to me.

Yes, any TG on Mo City that's repeated on a dirrerent site sounds (or may sound) distorted.

I thought that private call was going to be disabled when the Galveston County System was absorbed into Starnet?

Subject: Re: [HoustonScan] STAR-Net distortion

I hear the techs talking about the problem on several different talkgroups. Harris County techs are using 20560 and the Galveston County techs are using

53264.
They are also using private call.
Seems to come and go. Sounds OK now.
They were talking about the Galveston and Texas City sites.

# 12224. Wings Over Houston airshow freqs 2006

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-20 02:31:14 UTC
From: Myles
Topic: 12224  Message: 12224

If you want an email post to come out in a timely manner, guess you
have to go online and post direcly from the Yahoo Groups.

Sorry, the original post will come out again in hours or days.

OK, here's the airshow staff radio lineup.
It's mostly the same from last year except they changed the Channel 1
repeater to 464.500 MHz.
These are the airshow staff channels for 2006:

1 464.500 operations/security (15W repeater-10' antenna/roughly 5
mile
range)
2 464.550 fuel/oil/smoke
3 462.700 pilot registration/food/water carts/Eagle Squadron
4 464.500 parking
5 467.950 gates
6 467.750 setup/takedown
7 467.800 pyro
8 467.850 finance
9 467.900 pilot shuttle
10 451.825 ground safety
11 451.850 media
12 451.900
13 451.950
14 452.000
15 451.800
16 461.4875

All channels use a PL of 218.1 Hz

Notice the parking channel (4) is on the repeater output of channel
1. That
won't cause any problems, right?
And as with last year, the gates channel (5) is the input to HFD
channel 6.
Pretty sure they don't have permission from Houston to use that
frequency.
Think someone needs to tell Brown and Root that they can't use those
freqs.
I never got the correct freq for the ground safety channel (10) last
year
but I got it now.
Channels 12-16 are not listed on the laminated channel guide that the
staff
carries. They could be used for special purposes or just for

chatting.

Will have Airboss freqs tomorrow. The Thunderbirds are parked out at
Ellington and will perform tomorrow for the special show. They may
go up
around 3pm.
Not sure if the B2 will do the fly-by this year. They may keep it
overseas.
Maybe it needs to fly over North Korea.

# 12229. Complete Airshow list 2006

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-20 14:30:35 UTC
From: Myles
Topic: 12229  Message: 12229

Well, it may not be complete, but it's more complete than before.
I plan on going up near the field later to catch some things but I've
got quite a bunch of info already that should keep someone busy.
Check my page here for the latest update complete with airshow staff
radios and Airboss freqs.

# 12230. explosion? at Lyondell Plant near Pasadena

Yahoo group: HoustonScan (2005 — 2006)

From: Myles
Topic: 12230  Message: 12230

Depending on who you listen to, there was an explosion or just a car fire at the Lyondell Citgo plant at 225 and Scarborough.
Reported one person blown away from the "explosion" and when units got on scene, found one person to be treated with burns.
Pasadena was advised that the internal Lyondell plant folks would command the scene and Pasadena is pumping foam into the plant.
Not much to listen to on the Pasadena fire radio.
The Lyondell plant uses a 900 MHz Motorola trunk system using these freqs:
938.450
938.4625
938.475
938.4875
938.500
939.6625
939.6875

The trunk system supports private call and phone capability.
A couple of the emergency response talkgroups I caught are 688 and 720.

# 12231. Re: explosion? at Lyondell Plant near Pasadena

> 938.4625
> 938.475
> 938.4875
> 938.500
> 939.6625
> 939.6875

Here's some additional freqs to the system I didn't know about:
935.7125
935.725
935.7375
935.750
939.175

HFD is also working the incident on Tac-8 460.625

# 12232. Acoustic band opening

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-20 17:34:14 UTC
From: Cliff
Topic: 12232  Message: 12232

OK- this doesn't involve radio, but it is about the air show and tropospheric ducting.

Friday morning around 11:20, I heard a series of many explosions at a level I'd characterize as mildly window-shaking.

I assume it was the pyrotechnicinas at Ellington warming up for the show (it was from that direction).

The weird part is that I'm in Dickinson, 13 miles from KEFD, and I've never heard them blowin' things up anywhere near that loud down here.

Maybe conditions were just right.

From: Myles Barkman
Topic: 12232  Message: 12233

I'm about 3 miles from there and don't recall hearing the explosions. I
believe they did set off some Pyrotechnics on the field since they are doing
a special show today and have a few demonstrations.
The Thunderbirds are just finishing a show they started at 2pm. There was
some friction between the Thunderbird team and the EFD fire department
because there were some fires on the field that the fire department could
not or would not put out.
The T-birds made it clear that they could not go up with all the smoke from
the grass fires.
EFD fire said their trucks are to stay on hard surface so they could only
put out fires near runways and taxiways.
They worked it out and the birds went up even with some fires still burning.

T-birds are using 143.850 and 235.250 for their air-air comms.

Funny since much of EFD's equipment is all-terrain rated. EFD had better get its act together if Ellington wants classy acts to return. The Snowbirds well and truly sucked.

143.85, eh? AM?

Date: 2006-10-21 18:49:54 UTC
From: Myles Barkman
Topic: 12232  Message: 12236

OK, today was different. I heard the explosions today. I could also describe them as mildly window-shaking.
My dogs were barking.
I would attribute this mainly to the wind direction but it could also be from the low cloud deck. Yesterday, the winds were from the north so it carried the sound to Dickinson. There were little or no clouds.

# 12238. HPD Citywide Chase?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-21 21:09:15 UTC
From: bpckty1
Topic: 12238  Message: 12238

About noon today, I heard what appeared to be a chase on Citywide. The officer was calling out locations, but I because of the siren's noise, I was having difficulty catching the location, until the officer said, "turn right on Seawall." I tried to copy Galveston on Starnet, but since I live about 5 towers away from the island, I was unable to copy any Galveston traffic.

Did anyone on the group copy any of this?

# 12239. Choosing the right antenna.

OK, so I have a Uniden BCT8 and I'm looking for a good antenna to use in my truck. But here is the kicker, I don't want a mag mount. I have a thru the glass antenna right now, but these suck!! I know it was just a quick fix while I search for a diff. alternative. I've seen some small stubby plastic ones or maybe you guys could help me with my problem.

Thanks,

Jason

From: Scott Royall
Topic: 12241  Message: 12241

Well, I've done my annual pilgrimage to Ellington. It was ok, even though I missed the first half. One thing that did surprise me was that, when I sat with the B-52 boys to watch the T-birds, they were amazed that my old PRO-93 had UHF air. They said they couldn't find portable scanners with it. Isn't it common in the trunk-capable beasts?

Oh, and if someone is at the show tomorrow, I'd appreciate it if they could get contact info for the weapons officer aboard "SAC Time" (that's the B-52). I just want to pass along any radio solutions we come up with that fit their needs. Email address is all I want.

Does anyone know if there have been some recent changes at Lifeflight
Control?
I'm getting different radio ID numbers for the dispatchers now.
Perhaps they are just using another console that they don't usually use.

I'm going to assume that most action will be on the Pearland or Alvin sites.
I'll listen in on the Alvin site for awhile and see what's active.

# 12247. thunderbirds maint

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-22 20:04:37 UTC
From: Myles
Topic: 12247  Message: 12247

Finally towards the end of the show, I found some comms from the
Thunderbirds maint crew on 413.275 with DPL of 431.
They are starting their last performance of the show.
Comms should be on 143.850 and 235.250 AM mode.

They must not be looking too hard if they can't find a scanner with the UHF MIL band.
I check the RadioShack.com site and did notice that a couple of their digital trunking scanners (PRO-2096, PRO-96) did NOT include the UHF MIL band.

These scanners do:
Pro-2052 trunking
BC-72xlt
BC-350c
PRO-433 trunking
BCT-15 trunking
BCD-996T trunking
PRO-97 trunking
BR-330T trunking
BC-898T trunking

# 12252. Acoustic band opening / radio related

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-23 02:09:53 UTC
From: SD
Topic: 12252  Message: 12252

Actually the same Weather conditions that give us those Tropo band openings can cause sound to be propagated over more than normal distances. One example was an outdoor rock concert somewhere in the Northeast US. A police department received multiple calls one night the callers were complaining about windows rattling ,hearing rumbling sounds and music. After dispatching several units the source of the sound could not be found. One of the PD units finally figured it out with the help of a friend that was a ham and avid TV DXer. Seems that night there was a Tropo duct set up in the area surrounded by 2 mountian ranges. The source of the noise was found : the Rock Concert 12 miles away. As the concert ended so did the complaints. Another note about this happening driving around the affected neighborhoods in places you could hear the sounds drive to the next block and detect no sound at all. Just like uhf signals. Can you just see the Officer's telling the callers the noise was coming from an adjacent town 12 miles away?

It's just another form of tone squelch, like PL or CTCSS.
Instead of a constant low-frequency audio tone like PL (Private Line), it is
a digital signal with more possibilities than PL offers.
It only comes in handy for the scanner listener if you receive interference
on a frequency and want to only hear a specific user with that tone.

It does, you have to program it with free Win95 (by Starrsoft) and it isn't very sensative out of band at all. But you can tune to the frequency.

I wouldn't get a stubby antenna (especially if you are wanting to monitor the VHF band). Depending on what band you want to monitor, I would get a dual band antenna (you can also get a tri-band 100, 400, 800 MHz antenna). You can go to the ham place on the North Freeway (45) I think near Spring Cypress/2920 or Cypresswood (I don't know exactly where it is, but it is somewhere up there). You can also go to Advanced Communications (on old Katy rd I think just east of the West belt), Northwest Communications (somewhere on Jones rd), or Cougar Communications (formerly Cougar, I don't know if they've changed their name) I believe on 529.

I was just going by current models that were on the RadioShack.com website.
I have the 296 and the 396 and I know there are plenty more that have that band.
I was just demonstrating that for them not to find portable scanners that didn't have the band available, they must not have tried very hard.
There are 9 current models that RS carries that has it.
I sort of wished I had been out there with my portable scanner to try out these noise canceling headphones I got at Fry's.
They were sort of the lower end model so I don't know how well they would have knocked out the jet noise.
I hadn't had a good test of them yet and this would have been a perfect opportunity to try them.
I listened and watched from the house, about four miles north of Ellington tower on the 17L/35R centerline.
Took a few pictures and only a couple came out fairly decent.
My camera is on the fritz and when I took it apart yesterday, the date reset and I didn't know it so the pics say 1/2/02.
I took some shots Friday from the DPS office across the street from Ellington. Nice blue skies, the best of all the days. But I didn't get very good shots.

Thanks, I've got the day off Wed. and I'll run by a few places and check out what they have. Now all I have to do is figure out where to mount the thing. I have a 02 Lincoln Blackwood so there is not much room behind the cab. I think I'm going to make a custom mount and stash it between the cab and bed.

Thanks,

Jason

I don't know, I heard Metro Traffic talking about it.

Be sure to get the exact locations of the companies I told you about
(because I can't remember their exact location). I also believe there
is a radio shop in Pasadena if you live down that way.

Well. I do appreciate the viewpoint, but there's a tendency to believe the military is the "enemy" when the general case is the opposite. The military in this country is heavily conditioned to obey its civilian masters even when the orders are pure cow dung. It's an imperfect system that's better than everything else.

In practice, though, I might react differently if the flight crew had been high brass. They weren't. They were just average joes who had the job of man-handling their BUFF around. I made several jokes about the aircraft and the crew empathically agreed. It's very rare that you meet a flight crew who doesn't profess love for their aircraft, but these guys were older and seemed quite genuine. The radios on a BUFF are just adequate to fly with. You're on your own if you want to listen to guys on other frequencies so I understood the reasoning behind the flight crew's interest. They were especially interested in listening to the T-birds, and were cackling over the team leader's spiel.

Never under-estimate the effects of unit rivalry. The B-52 crew called the T-birds "Thunder-chickens. "

I agree and remember its the internet we have to be careful on. I support the military but trust must go both ways and some of the brass act like they don't trust the lesdership in Washington and the leadership in Washington don't trust the hard working general public. Strange is it not the price we pay for 911. The movie 7 Days in May comes to mind. The soap box is closed on my end. I hear Friendswood is on 800Mhz.

The brass is always something to handle with caution.

Anyway, I was able to determine the BUFF's tail number and contacted Barksdale Public Affairs. They'll either be helpful or not. At least I did my bit.

From: Myles Barkman
Topic: 12272  Message: 12272

Looks like the primary users of the League City site are League City and Friendswood.
You can hear them on some of the other sites like Alvin & Pearland sometimes, but you don't hear many other users of the League City site.
Heard one Friendswood PD unit tell another one to go to "5". I didn't move fast enough to catch it was a talkgroup or if they were talking about 453.2875 on the old UHF system.

I was told that League City police switched to new frequencies. Does any one know what they are? What I have is 858.98750, 859.98750, 860.98750 I am told that these are old. I am new to scanners. Any help will be great.
Thanks Art

# 12276. Re: Choosing the right antenna.

Oh yeah, forgot about Fleet Safety on 2920 at Telge. They're not an actual radio shop though, they only install radios, sirens and lightbars. I don't know if they even carry antennas.

# 12277. League City site

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-24 23:00:13 UTC
From: Myles Barkman
Topic: 12277  Message: 12277

The confirmed freqs for the League City system so far are:
856.9875 alternate control (haven't heard in weeks)
857.9875 primary control
859.9875
860.9875
866.4375 (haven't heard in weeks)
867.900
868.375 (haven't heard in weeks)
868.600
868.750 (haven't heard in weeks)
If you can program in control-channel only mode, you only need to program the first two and not worry about the others.
Looks like the old control channel that was left on 858.9875 is gone now. They were leaving it for the SCADA data talkgroup 4816. Have not heard any new data squawks on the League City site so don't know what they are using for that service now.
Check http://home.houston.rr.com/freqzone/freqs/star-net.html for all the info on the STAR-Net system including site frequencies and talkgroups.
Also check http://www.radioreference.com/modules.php?name=RR&sid=38 for basically the same info but it is arranged better for programming specific agencies.

# 12278. HPD Citywide Question

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-25 01:49:57 UTC
From: bpckty1
Topic: 12278  Message: 12278

Does HPD have a bad repeater on Citywide, or have they started using encryption (DVP or DES)? All I've heard this evening are hissing noises.

There seems to be a bit more "hiss" in the audio of HPD radios but I seriously doubt it has anything to do with any encryption. It might have something to do with a change of signal propagation or perhaps a weak repeater.

Interesting tidbit:

After 11PM I heard units very clearly, but they were being referred
to Ch 10. Perhaps it was the repeater system. But it did sound like
many of those infamous 3 letter federal agencies.

Since it's encrypted, I can't even guess what agency these folks might
belong to.
I don't think the frequency is common to any particular agency.
I've seen it used by Marshals, INS, FBI in various other lists.

From: Myles Barkman
Topic: 12300  Message: 12300

At the end of the airshow last weekend, I heard "Thunderbird 14 heavy" coming in for a landing. Anyone what this was?

On a completely unrelated note, I noticed 5 military helos departing Ellington yesterday following the Beltway westbound.
They may have been National Guard. At the same time, I noticed lots of P25 encrypted traffic on Secret Service freqs Sierra 166.5125 used for White House Staff and Oscar 164.8875 which is primary for Presidential and family escorts. Also caught some on 166.4625 which is a common freq shared by most agencies.

I see that there is a TFR (Temporary Flight Restriction) in effect for Ellington for aircraft from 3:50pm to 4:55pm Monday and for Sugar Land from 4:20pm to 6:40pm. Then again for Ellington from 6pm to 7:05pm.
It gives a Secret Service phone number for police or medical helicopters to call if they need to go into the restricted space.

According to news sources, Bush will be at a rally at Sugar Land airport (event starting at 5pm) trying to promote Republican write-in Sekula-Gibbs. He might also be coming from an event in Galveston prior to going to Sugar Land but I can't verify any info on that. News sources aren't keen on giving exact itineraries. You kind of have to piece these things together.

From: Scott Royall
Topic: 12300  Message: 12302

I don't know, but I imagine it's their equivalent to the Blue Angels' "Fat Albert."

---

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Myles Barkman

To: HoustonScan
Subject: [HoustonScan] thunderbirds and other stuff

At the end of the airshow last weekend, I heard "Thunderbird 14 heavy" coming in for a landing. Anyone what this was?

On a completely unrelated note, I noticed 5 military helos departing Ellington yesterday following the Beltway westbound.
They may have been National Guard. At the same time, I noticed lots of P25 encrypted traffic on Secret Service freqs Sierra 166.5125 used for White House Staff and Oscar 164.8875 which is primary for Presidential and family escorts. Also caught some on 166.4625 which is a common freq shared by most agencies.

I see that there is a TFR (Temporary Flight Restriction) in effect for Ellington for aircraft from 3:50pm to 4:55pm Monday and for Sugar Land from 4:20pm to 6:40pm. Then again for Ellington from 6pm to 7:05pm.
It gives a Secret Service phone number for police or medical helicopters to call if they need to go into the restricted space.

According to news sources, Bush will be at a rally at Sugar Land airport (event starting at 5pm) trying to promote Republican write-in Sekula-Gibbs. He might also be coming from an event in Galveston prior to going to Sugar Land but I can't verify any info on that. News sources aren't keen on giving exact itineraries. You kind of have to piece these things together.

The Thunderbirds support plane don't have a special
paint job like the Blue Angles do.

Among other differences. I was saying that it was undoubtedly a support craft. At least the Angels have the showmanship to do something fun with theirs. The radio traffic last weekend suggests the T-birds are more prima donnas.

OK, I think I heard a C-17 flying around at one point. Could have been one
part of the show too.
Here's a video of the C-17
http://beqiraj.com/usa/movies/c17_globemaster/index.asp

and here's one of the C-130

I have found that Navy personal seem to be more
friendly to the the public. At air shows that is. The
other services are friendly enough but I am a Navy
brat anyway. I have heard that the T-birds could be
difficult.

# 12308. arsons in Pasadena

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-10-29 05:00:57 UTC
From: Myles Barkman
Topic: 12308  Message: 12308

Have had several fires in the past few hours in Pasadena. A house fire fully involved, a detached garage fire in Taylor Lake Village, and now a commercial business off Red Bluff. They are working this latest one on Fire Command-1 talkgroup 7440. Business is Alabaster Bioremediation at 6921 Olson Ln.
Reportee stated they saw a couple of males running into the woods from the structure.
May have a fire bug out here tonight.

Being on the ground when Thunderbird 14 Heavy came in I can say that it
was not the same plane as the one that flew the demos during the show.

Does anybody know the frequencies for 5 Star Securities (or 5 Star Event Services)? I have seen them at numerous events in and near downtown including at Robertson Stadium (Houston Dynamo soccer game) and Verizon Wireless Theater.

Their TDPS listing is:
http://www.txdps.state.tx.us/psb/company/company_details.aspx?id=B09954

Charles

# 12311. Re: 5 Star Security frequencies?

What type of radios were they using, vhf, uhf?

I recall several years ago, about the time they went into business, they were using the uhf itinerants of 460.500/550. But, today they may be using one of the LTR trunks.

Sounds like a quest.

I have found that Navy personal seem to be more
friendly to the the public. At air shows that is. The
other services are friendly enough but I am a Navy
brat anyway. I have heard that the T-birds could be
difficult.

Hearing activity on Secret Service Freqs, it P25 but I am not sure if
it is encrypted or not.

Also Sugar Land PD is operating off of Sugar Land PD Tac 1.

Just watched them fly over the house going to Ellington. Got a few shots
on the broken camera. One came out decent.
Hearing Secret Service activity on these freqs:
164.8875 P25 encrypted
166.5125 P25 encrypted
165.375 P25
165.7875 P25 in clear

From: Myles Barkman
Topic: 12314  Message: 12317

Just heard "wheels up" on 460.400 so they must be going by helo to Sugar Land.
A frenzy of activity again on the pre-mentioned freqs.
Heard a DPS helo flying around EFD before AF1 landed.
Think I caught some activity on 265.400 which is a common freq used for CAP (not civil air patrol).
Just heard Marine One change to 124.55 and talk to Houston approach.
This may be a freq for just Marine One.
This is the same controller as 134.450.
Well, gotta go take the dog to the vet for his rabies shots.
Guess I caught most of the good action anyway.

I guess we'll soon find out.
BTW, the Brazoria tower *was* on 155.685 MHz. Don't know if they will
change to some other freq when it goes digital.
I just heard it now on 155.685 still in analog mode.

Robert,

Are you sure the officer said, "Tac-8?"
Or, did he say, "Take 8?"
Either way, they went to 460.2250.

Interesting story tonight on Ch 26, Fox, KRIV, news. But, it, for now, is not on their highly advertised website.

A low power FM station in Acres Homes was transmitting on 96.1MHz while awaiting FCC approval as a low power station. The FCC did not approve the license, and closed the station. The owner said he was warned that he would receive a very large fine if he turned the transmitter on without a license. The station's owner said they will become an internet radio station until they can return to the airwaves.

Try 467.9000, PL 88.5

It appears to be a supervisor channel, so there are probably others, as
yet undiscovered.

Date: 2006-11-05 16:53:46 UTC
From: Myles
Topic: 12331  Message: 12331

Lots of military air-air activity this morning. Think maybe they are all landing now.
Hearing activity on these freqs:
139.825 (not heard by Ellington F16s before)-could be refueling
141.900 Victor 7
141.975 Victor 8
142.025 Victor 9
143.425 Victor 10

Who knows where they were talking before I started hearing them. Maybe they ran through the whole set of freqs.

This was all in AM mode. After I posted that, I heard some more activity
for a little while. Some popped up on 142.200 Victor 1 as well.

Staying on topic with aviation stuff, anyone know where the 134.450 MHz
transmitter is? I know in today's post 9-11 era, finding that sort of data
on the web is nearly impossible.

After checking the archives, their website (5 Star Event Services), http://www.5starstaff.com, and the FCC Databases, it appears that, in most cases, they most likely use the venue's radios.

# 12341. BILL Box (second try)

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-11-09 17:19:34 UTC
From: bpckty1
Topic: 12341  Message: 12341

This article is from a link in the RRDB Tennessee Forum.

This item is very similar to the ones that Steve has purchased for the CoH. An item like this should be with every agency in the country. It follows the axiom of KISS, not more money and new technology will solve the problem. Unfortunately, most agencies/political entities will continue to bicker and high-commission salespeople will continue to sell items that won't work in desparate situations. All it takes is a comprehensive, but simple, plan, training, and practice.

I hope this posting survives the formating.

Emergency director's invention fits the BILL
System allows different radio frequencies to communicate

By MITCHELL KLINE
Staff Writer

FRANKLIN ☐ Spending $30,000 for a device and accessories that would allow different agencies to communicate through separate radio frequencies at the scene of an emergency didn't seem like a wise investment to Bill Jorgensen.

So the director of Williamson County's Emergency Communications Center got to thinking and figured out a way to achieve the same result for under $5,000.

Jorgensen linked UHF, VHF and 800-megahertz radios to a "mobile multiswitcher" and was happy with what he heard. With the flick of a switch, three different kinds of radios ☐ each on separate frequencies ☐ could receive and transmit signals amongst each other.

"This solves a nationwide problem," Jorgensen said. "It was a problem we ran into in this county."

The city of Franklin will soon use 800-megahertz radios, while most local agencies use UHF ones, essentially isolating the city from communicating with outside agencies, Jorgensen said. If, for example, officers from Franklin, Brentwood and Fairview were on the scene of an emergency, they would not be able to communicate through radios unless a device such as the one Jorgensen invented was being used.

Called the Basic Interoperability Liaison Link, or BILL Box, the device could become a hot-selling item in the public-safety sector. It's something police departments, firefighters, medical personnel and federal agents have all been looking for. There are others like it, but none come as cheap and are as simple to use, Jorgensen said. Though Jorgensen invented the BILL Box, he doesn't plan on making a dime off it.

Because Jorgensen made the box while he was on the clock for Williamson County and used federal grant money to build it, he said he cannot profit from its sale. But the Nashville-based company that helped him build it can. Commtech, which sells two-way radios, equips 911 call centers and sets up siren warning systems, now makes and sells the BILL Box.

Roger Good, the company's sales engineer, thinks there's a chance the box could be big business.

"I hope so," Good said. "We've been selling them for about a month. We've put out about a dozen and have orders for more. I'd love for it to explode all over the country."

Williamson County purchased seven of the boxes, for $4,800 apiece, Jorgensen said. The boxes will be given to different departments and kept in vehicles so that they can be accessed quickly if needed.

To use the box, radios at the scene of an emergency would be turned to a preprogrammed tactical frequency that will accept signals from transmitters.

The devices can be rapidly deployed and set up. Each of the radios in the box is linked to antennas that can mount on a car.

The box can be plugged into a wall outlet or cigarette lighter.

# 12342. digital radio

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-11-09 17:19:25 UTC
From: Dominick
Topic: 12342  Message: 12342

Houston first d-star is now online!
146.45/147.45. as of Saturday at 1930 hrs installed on a 100' R25
tower at the Magnolia Shop.
Effective range is 18 miles Repeater to mobile to the east so far.
Additional testing pending this week.
==========
The simplex frequency range has been assigned for use by digital so
the frequencies are:
147.450 repeater input
146.450 repeater output
Callsign is KE5LFK
On a normal analog radio, the signal will sound like white noise.

# 12343. STAR-Net control channels

I have recently purchased the Uniden 396T. I see numerous members using the ARC software. Are there any posts on this site concering reviews of other software and their pros & cons, or is the ARC software so much better that reviews are unimportant? 2.Also,if you have the FCC data base on CD, can you use the ARC copy function to load the scanner, or can you only use this feature via the Radio Referende subscription?
Thank You

# 12345. RE: [HoustonScan] programming software

Yahoo group: HoustonScan (2005 — 2006)

From: Michael W. Jones
Topic: 12344  Message: 12345

First, let me preface my comments by saying that I was a beta tester of ARC396, and never tried the Uniden software, so my comments may be slightly biased.

There are two ways (soon to be three) that you can get data into ARC396.

The first is, as you mentioned, importing Trunked Data from RadioReference.

The second is WebCatcher, that allows you to paste data from anything you copy to the clipboard and it will parse out frequencies. While this works well with sources other than RadioReference, it does seem to have a bit of a problem with lists like on Myles' site, where it will pull in the input frequencies as well as the PL tones and try to import them as frequencies.

The final method is in the current beta, and the next released version, is the Conventional Data import from RadioReference.

For more information consult RadioReference's WIKI

I just used the demo version of the BuTel ARC396 software last night to program mine for my upcoming trip to New Braunfels and Fredericksburg. I corrected the improper system type for the LCRA sites from narrow to wide EDACS also.
I also started my endeavor of programming it for the local area. I hadn't even had STAR-Net talkgroups programmed in it before (been using my older 296 thus far).
Much easier than trying to do it by hand. I don't have much experience with the other software programs out there. The ARC396 seems to do what I need it to do. I just wish I could figure out how to make it NOT set all the systems to be active when you download back to the scanner. Guess I have to specifically tell them to be locked out.
I'm still learning how to use this scanner. Does the Video Professor guy have a DVD on the Trunktracker IV series scanners?

I have the 396 for almost a year now and I have only used the Uniden software to program it. I love having the software vs my old Pro 90 hand imput only; but I have never used the Arc software. Maybe I don't know what I am missing, but the Uniden software works great for me. Good luck and happy programming

It is Thu, 9:55am EST (1455z).
Several NASA T-38 flights are arriving at the Shuttle Landing Facility at the moment.
NASA 963 attempted to contact the SLF Tower on its UHF freq 284.0 when the aircraft crossed the the Gulf coastline. But instead of being tuned to 284.0, 963 was up on 235.4, so he got some good natured ribbing, like when an airline pilot's comms with the passengers goes out over the ATC freq.
NASA 923 is also among the aircraft in this flight. 923 is a YL who used the nickname "Pambo" for herself or for one of the other astronauts.

I'm beginning to suspect that HPD has a few "bad" repeaters. I have noticed that citywide, for exanple, seems to occasionally "splatter" onto 460.4000 and 460.4500. This may be the cause of the "mysterious" encryption comms.

Subject: [HoustonScan] Re: HPD on Tac 8?

I'm beginning to suspect that HPD has a few "bad" repeaters. I have noticed that citywide, for exanple, seems to occasionally "splatter" onto 460.4000 and 460.4500. This may be the cause of the "mysterious" encryption comms.

From: Chris Boone
Topic: 12364  Message: 12364

Looking for RG8 style (8237) coax along with 100+ft of 9913, but need short runs of the 8237 (or similar...NO aluminum shield stuff can do in this case; otherwise I would use 9913 for everything)...Who would be best place in Houston to get it?
Thanks!

Chris

I picked this system up in downtown area. According to the RR DB, that's an FDC system in Beaumont. Control channel was on 409.1000 Mhz. Was this skip or is there a new federal trunked system in town?

-rick

Topic: 12366  Message: 12367

It was skip. I've picked it up before too. Got it in my list, just didn't have the system ID in there.
I'm not going to be picking up too much of anything now that I've taken my antennas down yesterday. Getting ready for the big move a few miles away. Will be rubber ducky bound for awhile.

# 12368. Scanner "Rigging" Question.....

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-11-28 22:56:53 UTC
From: yamaearl
Topic: 12368  Message: 12368

I recently Upgraded from a Pavillion a200n to a Presario SR2013WM.
to run Win95 on the old System I used Serial-to-1/8" cable for inter
face between the Tower and the Scanner. On the Presario,there is NO
Serial Port,only USB Inputs.Anyone know where to obtain a USB-to-1/8"
or USB to Serial.My local Radio Shack's (Seabrook&Kemah) are of no
help at all. By the way ,My "rig" is a Pro-95 on a Discone mounted at
approx. 40'.Not Active but still get 7 County Coverage.I also use a
Pro-92,2050,and a 2067.Win95 is my Database Program(great software).
Any Help is greatly appreciated.

Go out to Fry's near Nasa Road 1 and pick up a USB to serial cable there. I picked up one a few months back for about $15. I know they sell them, so be sure to hunt down an employee that has a clue.

Radio shack Does have a USB to serial adaptor. For that matter, so does Fry’s and almost any computer store or you can order it online.

HYPERLINK "http://www.radioshack.com/search/index.jsp?kwCatId=&kw=usb%20to%20serial&origkw=usb%20to%20serial"http://www.radioshack.com/search/index.jsp?kwCatId=&kw=usb%20to%20serial&origkw=usb%20to%20serial

I know the one at Baybrook carries it, but Fry’s is closer to you.

Starting to hear some new talkgroups popping up on the HISD EDACS system.
Some of you might check it out and see what you hear.
Also, I hear activity on TG 02-067 this late at night. Don't think it is
telephone maintenance.
Sounds more like security of some sort.
Perhaps it's the guys that used to use 452.050 and had a patch to TG 02-023
to talk to HISD PD.
Looking at this page, perhaps these are the "Prevention Control
Officers/Public Safety Representatives".

Got it, the super cheap and waste of airtime way of doing a repeater. I have not seen one of these in many years.

To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] Buy a GMRS Simplex Repeater Controller

a simplex repeater controller is a "store and forward" device. The device records a recieved signal then retransmits it on the same frequency.

I knew it was Generic....

Here's the GRE site with the USB cable for the scanner. Radio Shack
also has the same cable. Beats trying to find the USB to Serial
adapter and hoping that it works.

http://www.greamerica.com/scanner.html

These are the guys that actually built the radio.

# 12413. Re: [HoustonScan] Re:DPS Houston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-10 00:54:42 UTC
From: Wayne Gresser
Topic: 11676  Message: 12413

Great catch! Now all we need are NAC capable scanners...
Do you have the NAC's and channel plan for the car to car channels (155.460, 155.450, 155.4675, 155.4525, 156.210 & 156.2175)? Also what about the CLE channels (155.505, 155.5125, 159.090 & 159.0975)?

Wayne

# 12415. Re: [HoustonScan] Re:DPS Houston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-10 22:20:37 UTC
From: Wayne Gresser
Topic: 11676  Message: 12415

The correct NAC codes for 155.4450 and 155.4525 is 123 and 128 respectively.

# 12416. Digital radio question?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-09 11:32:35 UTC
From: D.J.
Topic: 12416  Message: 12416

I have always listened to DPS and local fire departments in the west Houston and Katy areas in my car and now DPS is not working on my conventional scanner. In my search to figure out why I came across your group explaining why. My question is what kind of scanner do I need to update to in order to receive DPS on this new digital system. I don't have a lot of money to spend some where around $500 I guess so if anyone can instruct me on what and where I would appreciate it. Thanks in advance for any responses!

# 12417. Re: [HoustonScan] Digital radio question?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-11 17:53:55 UTC
From: navscanmaster@aol.com
Topic: 12416  Message: 12417

The cheapest ones to find are the Uniden BC250D or BC785D with the P25 card included. The next cheapest would be the Uniden BC296D or BC796D. These can all be had for under $500, but probably not under $250 on Ebay, albeit used. The Radio Shack Pro96 and Pro2096 retail for an average of $450, but can be found less expensive used on Ebay as well. The Uniden models BCD396T and BCD996 are the newest ones out there, and are most always going to be over $525 unless someone is just dying to get rid of one.

# 12418. Re: [HoustonScan] Re:DPS Houston

Sounds like DPS houston is still broadcasting requests for wreckers in
FM on 155.460

I spoke w/ a wrecker driver earlier today, and he confirms Josh's observation. Apparently the DPS dispatchers realized that they need to keep the lines open to the wrecker drivers. This particular driver's dispatcher is monitoring the new frequencies, so he's not left in the dark, but both he and his competition are grateful for DPS broadcasting on the old frequency.

# 12420. Re: [HoustonScan] Re: Pro 96, Houston trunk system?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-11 17:37:51 UTC
From: Peter T.
Topic: 12416  Message: 12420

Good morning everyone,

I'm going to be visiting southeast Houston in about three weeks . My background is in public safety here in California, not being familiar with the area , I'm not sure which zones to listen too. I'm not sure for example, which agencies belong to a particular zone. I'm not sure my questions make sense, because I'm writing before coffee! I will be visiting the downtown areas, the cities Deer Park, Pasadena etc. does anyone have PRO 96 scanner file that they could send me that covers the Houston area/Harris County police and fire agencies? Perhaps someone could could help witch agencies along to a particular zone. I want to confirm Houston police are still conventional?

Thank you for your assistance,
Respectfully, Peter

"D.J." <djhz28@...> wrote:
I have always listened to DPS and local fire departments in the west
Houston and Katy areas in my car and now DPS is not working on my
conventional scanner. In my search to figure out why I came across
your group explaining why. My question is what kind of scanner do I
need to update to in order to receive DPS on this new digital system.
I don't have a lot of money to spend some where around $500 I guess so
if anyone can instruct me on what and where I would appreciate it.
Thanks in advance for any responses!

# 12421. Re:DPS Houston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-12 15:57:46 UTC
From: rusty_caufield
Topic: 11676  Message: 12421

I was going to ask about that, since the program list I have has the 123 & 128 and not the 154 & 156.

Also the list I have does not list the NAC for 11 to 19 repeaters but I was assuming that it was the first 3 digits of the analog PL tone, but ch's 12,13,& 16 are posted different (rounded up?). Has anyone actually confirmed these on a P25 Radio or Scanner?

- Rusty

Date: 2006-12-12 17:05:35 UTC
From: Wayne Gresser
Topic: 12422  Message: 12423

None of the current generation of scanners allow for NAC programming. So, program the digital frequency into your 396. Set the receive mode to FM.

yup, HPD and HFD are still conventional. Go to Myle's database (home.houston.rr.com/freqzone/freqs/freqs.html) for all frequency/trunked system info. In the RR database, go to Harris County SO's homepage and HPD's home page for a map of the districts. Deer Park and Pasadena are on STAR-Net. If you need any more help you can email me at scanfan03@... or you can post here again.

# 12425. BCD996T Question?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-13 09:21:57 UTC
From: D.J.
Topic: 12425  Message: 12425

After researching the internet for awhile I think I have found a scanner that I like the Uniden BCD996T. Is anyone on this list using this scanner now and how is it as far as usability and ease of function? Since it is apco p-25 already I am assuming it will receive the new DPS frequency. I really appreciate all of the help I have received so far on this list. Thanks in advance for any responses!

# 12426. Re: [HoustonScan] BCD996T Question?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-13 12:26:25 UTC
From: John Stritch
Topic: 12425  Message: 12426

I bought one a few months ago and am very pleased with it. It receives P-25 transmissions (such as DPS Pierce) just fine.

The 996 has a lot of features but isn't hard to use once the purpose of each is understood.

Subject: Re: [HoustonScan] BCD996T Question?

I bought one a few months ago and am very pleased with it. It receives
P-25 transmissions (such as DPS Pierce) just fine.

The 996 has a lot of features but isn't hard to use once the purpose of
each is understood.

From what I can tell, car-to-car P25 ops are on the following freqs:
155.445 NAC 162
155.460 NAC 162
159.2175 NAC 162
(seeing a pattern here yet?)
I don't see usage of 155.4525 and 155.4675 set up for simplex car-car use.
Notice that the NAC code is pretty much a rounding of the analog PL
frequency. Don't think that was an accident.
So is Conroe using P25 on 155.4525 and 159.2175 now?
What about Texas City on 159.2175? I hadn't had much time to listen in
lately.

So is Conroe using P25 on 155.4525 and 159.2175 now?

I'm hearing them on the regular freqs 155.445,154.665,159.210
here in willis and also on the edacs system id 585 I noticed that
585 is linked to 155.445,hearing both dispatch and car on 585 id

Late last night, both my 396 and 96 captured a weak 856.4875 digital, from my spot in "east San Antonio, aka/ west Harris County, with the 96 showing an ID of 1A7 and T102 (shortend to fit the panel display on the 96). I presume that this means tower 2, since the first set was 1A7 T101.

But, since it was late, no voice traffic was heard.

Alas, when daylight came around, and the fog shrouded my neighborhood, 856.4875 had reverted to analog.

;^p

Ah, the quest...

Yes, you are correct in your logic with how DPS arrived at their NAC's by rounding upward the previous used pl tone. The challenge is what NAC did they choose for simplex ops when the repeater NAC is 162?

For example, channel A1 repeater
Uses a NAC of 114. I have verified the simplex NAC for 155.460 as 162. Unlike the analog plan, it would appear they are not using the same NAC for the repeater and simplex. The four oddball NAC's that do not follow the rounding up theory are 114 (155.46), 123 (155.445), 118 (155.4675) and 128 (155.4525). Maybe they will be using these same NAC's for the CLE channels, only time will tell.

As far as the other dispatch centers in DPS Region 2, (Conroe, Texas City, Beaumont and Lufkin), I think they are still analog. The schedule for the last several weeks has been for the switchover to occur on a Friday, so maybe one of these will be digital tomorrow.

# 12439. FCC Eliminates Morse Code Requirement

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-16 03:01:54 UTC
From: Chris Boone
Topic: 12439  Message: 12439

FOR IMMEDIATE RELEASE: NEWS MEDIA CONTACT:
December 15, 2006 Chelsea Fallon: (202) 418-7991

FCC MODIFIES AMATEUR RADIO SERVICE RULES, ELIMINATING MORSE CODE EXAM REQUIREMENTS AND ADDRESSING ARRL PETITION FOR RECONSIDERATION

Washington, D.C. - Today, the Federal Communications Commission (FCC) adopted a Report and Order and Order on Reconsideration (Order) that modifies the rules for the Amateur Radio Service by revising the examination requirements for obtaining a General Class or Amateur Extra Class amateur radio operator license and revising the operating privileges for Technician Class licensees. In addition, the Order resolves a petition filed by the American Radio Relay League, Inc. (ARRL) for partial reconsideration of an FCC Order on amateur service rules released on October 10, 2006.

The current amateur service operator license structure contains three classes of amateur radio operator licenses: Technician Class, General Class, and Amateur Extra Class. General Class and Amateur Extra Class licensees are permitted to operate in Amateur bands below 30 MHz, while the introductory Technician Class licensees are only permitted to operate in bands above 30 MHz. Prior to today's action, the FCC, in accordance with international radio regulations, required applicants for General Class and Amateur Extra Class operator licenses to pass a five words-per-minute Morse code examination.

Today's Order eliminates that requirement for General and Amateur Extra licensees. This change reflects revisions to international radio regulations made at the International Telecommunication Union's 2003 World Radio Conference (WRC-03), which authorized each country to determine whether to require that individuals demonstrate Morse code proficiency in order to qualify for an amateur radio license with transmitting privileges on frequencies below 30 MHz. This change eliminates an unnecessary regulatory burden that may discourage current amateur radio operators from advancing their skills and participating more fully in the benefits of amateur radio.

Today's Order also revises the operating privileges for Technician Class licensees by eliminating a disparity in the operating privileges for the Technician Class and Technician Plus Class licensees. Technician Class licensees are authorized operating privileges on all amateur frequencies above 30 MHz. The Technician Plus Class license, which is an operator license class that existed prior the FCC's simplification of the amateur license structure in 1999 and was grandfathered after that time, authorized operating privileges on all amateur frequencies above 30 MHz, as well as frequency segments in four HF bands (below 30 MHz) after the successful completion of a Morse code examination. With today's elimination of the

Morse code exam requirements, the FCC concluded that the disparity between the operating privileges of Technician Class licensees and Technician Plus Class licensees should not be retained. Therefore, the FCC, in today's action, afforded Technician and Technician Plus licensees identical operating privileges.

Finally, today's Order resolved a petition filed by the ARRL for partial reconsideration of an FCC Order released on October 10, 2006 (FCC 06-149). In this Order, the FCC authorized amateur stations to transmit voice communications on additional frequencies in certain amateur service bands, including the 75 meter (m) band, which is authorized only for certain wideband voice and image communications. The ARRL argued that the 75 m band should not have been expanded below 3635 kHz, in order to protect automatically controlled digital stations operating in the 3620-3635 kHz portion of the 80 m band. The FCC concluded that these stations can be protected by providing alternate spectrum in the 3585-3600 kHz frequency segment.

Action by the Commission on December 15, 2006, by Report and Order and Order on Reconsideration. Chairman Martin and Commissioners Copps, Adelstein, Tate, and McDowell.

The ARRL argued that the 75 m band should not have been expanded below 3635 kHz, in order to protect automatically controlled digital stations operating in the 3620-3635 kHz portion of the 80 m band. The FCC concluded that these stations can be protected by providing alternate spectrum in the 3585-3600 kHz frequency segment.

Action by the Commission on December 15, 2006, by Report and Order and Order on Reconsideration. Chairman Martin and Commissioners Copps, Adelstein, Tate, and McDowell.

As of tonight Texas City was still analog on 155.685 and Conroe was
analog on 155.445 as late as Friday night.

Wayne Gresser wrote:
> Yes, you are correct in your logic with how DPS arrived at their NAC's by rounding upward the previous used pl tone. The challenge is what NAC did they choose for simplex ops when the repeater NAC is 162?
>
> For example, channel A1 repeater
> Uses a NAC of 114. I have verified the simplex NAC for 155.460 as 162. Unlike the analog plan, it would appear they are not using the same NAC for the repeater and simplex. The four oddball NAC's that do not follow the rounding up theory are 114 (155.46), 123 (155.445), 118 (155.4675) and 128 (155.4525). Maybe they will be using these same NAC's for the CLE channels, only time will tell.
>
> As far as the other dispatch centers in DPS Region 2, (Conroe, Texas City, Beaumont and Lufkin), I think they are still analog. The schedule for the last several weeks has been for the switchover to occur on a Friday, so maybe one of these will be digital tomorrow.

I've been hearing key ups and "noise" for the past week on 173.1000,
which has been id'd previously as FBI channels a-7/h-4.
It is definitely analog, not APCO-25, and does use the PL 167.9.

Definitely has the PL. It is almost as if someone is keying the
microphone, possibly by accident, and it transmits until the repeater
times out. I don't recall hearing the beep.

Too bad it doesn't have the "funny stuff" (so far) one occasionaly
hears on HPD when a handheld on the belt is accidentally keyed.

anyone know how true this is below?

Gettysburg, PA

The FCC announced today that Kellogg's Corporation and the Federal Communications Commission have signed a pact to issue Amateur Radio Licenses on specially marked boxes of Kelloggs Corn Flakes, Rice Krispies, Sugar Frosted Flakes, Sugar Pops, and Sugar Smacks.

In this unprecedented move the FCC believes this will not harm amateur radio but allow will all individuals to receive an amateur radio license without having to demonstrate any skills, with the exception of being able to use a pair of scissors to cut out their operating permit from the specially marked breakfast cereal boxes.

A Kellogg's spokesperson from Battlecreek commented that Kelloggs' executives were proud to have their firm selected by the government to be the issuer of licenses for amateur radio in the US and hope soon to make agreements with other American cereal loving countries who receive our imports. They also expect to issue certificates of achievement for DXCF for confirmed contacts with 100 corn flakers. Kelloggs Corn Flake are the oldest Kelloggs product, which most closely coincides with the advent of amateur radio in the early twentieth century.

The "snap, crackle, pop" of ambient noises (qrn) on the hf bands will take on new meaning with this exciting venture to promote amateur radio internationally, Kelloggs and FCC officials affirmed in a recent news conference.

FOR IMMEDIATE RELEASE: NEWS MEDIA CONTACT:
December 15, 2006 Chelsea Fallon: (202) 418-7991

FCC MODIFIES AMATEUR RADIO SERVICE RULES, ELIMINATING MORSE CODE EXAM REQUIREMENTS AND ADDRESSING ARRL PETITION FOR RECONSIDERATION

Washington, D.C. - Today, the Federal Communications Commission (FCC) adopted a Report and Order and Order on Reconsideration (Order) that modifies the rules for the Amateur Radio Service by revising the examination requirements for obtaining a General Class or Amateur Extra Class amateur radio operator license and revising the operating privileges for Technician Class licensees. In addition, the Order resolves a petition filed by the American Radio Relay League, Inc. (ARRL) for partial reconsideration of an FCC Order on amateur service rules released on October 10, 2006.

The current amateur service operator license structure contains three classes of amateur radio operator licenses: Technician Class, General Class, and Amateur Extra Class. General Class and Amateur Extra Class licensees are permitted to operate in Amateur bands below 30 MHz, while the introductory Technician Class licensees are only permitted to operate in bands above 30 MHz. Prior to today's action, the FCC, in accordance with international radio regulations, required applicants for General Class and Amateur Extra Class operator licenses to pass a five words-per-minute Morse code examination.

Today's Order eliminates that requirement for General and Amateur Extra licensees. This change reflects revisions to international radio regulations made at the International Telecommunication Union's 2003 World Radio Conference (WRC-03), which authorized each country to determine whether to require that individuals demonstrate Morse code proficiency in order to qualify for an amateur radio license with transmitting privileges on frequencies below 30 MHz. This change eliminates an unnecessary regulatory burden that may discourage current amateur radio operators from advancing their skills and participating more fully in the benefits of amateur radio.

Today's Order also revises the operating privileges for Technician Class licensees by eliminating a disparity in the operating privileges for the Technician Class and Technician Plus Class licensees. Technician Class licensees are authorized operating privileges on all amateur frequencies above 30 MHz. The Technician Plus Class license, which is an operator license class that existed prior the FCC's simplification of the amateur license structure in 1999 and was grandfathered after that time, authorized operating privileges on all amateur frequencies above 30 MHz, as well as frequency segments in four HF bands (below 30 MHz) after the successful completion of a Morse code examination. With today's elimination of the Morse code exam requirements, the FCC concluded that the disparity between the operating privileges of Technician Class licensees and Technician Plus Class licensees should not be retained. Therefore, the FCC, in today's action, afforded Technician and Technician Plus licensees identical operating privileges.

Finally, today's Order resolved a petition filed by the ARRL for partial reconsideration of an FCC Order released on October 10, 2006 (FCC 06-149). In this Order, the FCC authorized amateur stations to transmit voice communications on additional frequencies in certain amateur service bands, including the 75 meter (m) band, which is authorized only for certain wideband voice and image communications. The ARRL argued that the 75 m band should not have been expanded below 3635 kHz, in order to protect automatically controlled digital stations operating in the 3620-3635 kHz portion of the 80 m band. The FCC concluded that these stations can be protected by providing alternate spectrum in the 3585-3600 kHz frequency segment.

Action by the Commission on December 15, 2006, by Report and Order and Order on Reconsideration. Chairman Martin and Commissioners Copps, Adelstein, Tate, and McDowell.

FCC MODIFIES AMATEUR RADIO SERVICE RULES, ELIMINATING MORSE CODE EXAM
REQUIREMENTS AND ADDRESSING ARRL PETITION FOR RECONSIDERATION

Washington, D.C. - Today, the Federal Communications Commission (FCC)
adopted a Report and Order and Order on Reconsideration (Order) that
modifies the rules for the Amateur Radio Service by revising the examination
requirements for obtaining a General Class or Amateur Extra Class amateur
radio operator license and revising the operating privileges for Technician
Class licensees. In addition, the Order resolves a petition filed by the
American Radio Relay League, Inc. (ARRL) for partial reconsideration of an
FCC Order on amateur service rules released on October 10, 2006.

The current amateur service operator license structure contains three classes of amateur radio operator licenses: Technician Class, General Class, and Amateur Extra Class. General Class and Amateur Extra Class licensees are permitted to operate in Amateur bands below 30 MHz, while the introductory Technician Class licensees are only permitted to operate in bands above 30 MHz. Prior to today's action, the FCC, in accordance with international radio regulations, required applicants for General Class and Amateur Extra Class operator licenses to pass a five words-per-minute Morse code examination.

Today's Order eliminates that requirement for General and Amateur Extra licensees. This change reflects revisions to international radio regulations made at the International Telecommunication Union's 2003 World Radio Conference (WRC-03), which authorized each country to determine whether to require that individuals demonstrate Morse code proficiency in order to qualify for an amateur radio license with transmitting privileges on frequencies below 30 MHz. This change eliminates an unnecessary regulatory burden that may discourage current amateur radio operators from advancing their skills and participating more fully in the benefits of amateur radio.

Today's Order also revises the operating privileges for Technician Class licensees by eliminating a disparity in the operating privileges for the Technician Class and Technician Plus Class licensees. Technician Class licensees are authorized operating privileges on all amateur frequencies above 30 MHz. The Technician Plus Class license, which is an operator license class that existed prior the FCC's simplification of the amateur license structure in 1999 and was grandfathered after that time, authorized operating privileges on all amateur frequencies above 30 MHz, as well as frequency segments in four HF bands (below 30 MHz) after the successful completion of a Morse code examination. With today's elimination of the Morse code exam requirements, the FCC concluded that the disparity between the operating privileges of Technician Class licensees and Technician Plus Class licensees should not be retained. Therefore, the FCC, in today's action, afforded Technician and Technician Plus licensees identical operating privileges.

Finally, today's Order resolved a petition filed by the ARRL for partial reconsideration of an FCC Order released on October 10, 2006 (FCC 06-149). In this Order, the FCC authorized amateur stations to transmit voice communications on additional frequencies in certain amateur service bands, including the 75 meter (m) band, which is authorized only for certain wideband voice and image communications. The ARRL argued that the 75 m band should not have been expanded below 3635 kHz, in order to protect automatically controlled digital stations operating in the 3620-3635 kHz portion of the 80 m band. The FCC concluded that these stations can be protected by providing alternate spectrum in the 3585-3600 kHz frequency segment.

Action by the Commission on December 15, 2006, by Report and Order and Order on Reconsideration. Chairman Martin and Commissioners Copps, Adelstein, Tate, and McDowell.

FOR IMMEDIATE RELEASE: NEWS MEDIA CONTACT:
December 15, 2006 Chelsea Fallon: (202) 418-7991

FCC MODIFIES AMATEUR RADIO SERVICE RULES, ELIMINATING MORSE CODE EXAM REQUIREMENTS AND ADDRESSING ARRL PETITION FOR RECONSIDERATION

Washington, D.C. - Today, the Federal Communications Commission (FCC) adopted a Report and Order and Order on Reconsideration (Order) that modifies the rules for the Amateur Radio Service by revising the examination requirements for obtaining a General Class or Amateur Extra Class amateur radio operator license and revising the operating privileges for Technician Class licensees. In addition, the Order resolves a petition filed by the American Radio Relay League, Inc. (ARRL) for partial reconsideration of an FCC Order on amateur service rules released on October 10, 2006.

The current amateur service operator license structure contains three classes of amateur radio operator licenses: Technician Class, General Class, and Amateur Extra Class. General Class and Amateur Extra Class licensees are permitted to operate in Amateur bands below 30 MHz, while the introductory Technician Class licensees are only permitted to operate in bands above 30 MHz. Prior to today's action, the FCC, in accordance with international radio regulations, required applicants for General Class and Amateur Extra Class operator licenses to pass a five words-per-minute Morse code examination.

Today's Order eliminates that requirement for General and Amateur Extra licensees. This change reflects revisions to international radio regulations made at the International Telecommunication Union's 2003 World Radio Conference (WRC-03), which authorized each country to determine whether to require that individuals demonstrate Morse code proficiency in order to qualify for an amateur radio license with transmitting privileges on frequencies below 30 MHz. This change eliminates an unnecessary regulatory burden that may discourage current amateur radio operators from advancing their skills and participating more fully in the benefits of amateur radio.

Today's Order also revises the operating privileges for Technician Class licensees by eliminating a disparity in the operating privileges for the Technician Class and Technician Plus Class licensees. Technician Class licensees are authorized operating privileges on all amateur frequencies above 30 MHz. The Technician Plus Class license, which is an operator license class that existed prior the FCC's simplification of the amateur license structure in 1999 and was grandfathered after that time, authorized operating privileges on all amateur frequencies above 30 MHz, as well as frequency segments in four HF bands (below 30 MHz) after the successful completion of a Morse code examination. With today's elimination of the Morse code exam requirements, the FCC concluded that the disparity between the operating privileges of Technician Class licensees and Technician Plus Class licensees should not be retained. Therefore, the FCC, in today's action, afforded Technician and Technician Plus licensees identical operating privileges.

Finally, today's Order resolved a petition filed by the ARRL for partial reconsideration of an FCC Order released on October 10, 2006 (FCC 06-149). In this Order, the FCC authorized amateur stations to transmit voice communications on additional frequencies in certain amateur service bands, including the 75 meter (m) band, which is authorized only for certain wideband voice and image communications. The ARRL argued that the 75 m band should not have been expanded below 3635 kHz, in order to protect automatically controlled digital stations operating in the 3620-3635 kHz portion of the 80 m band. The FCC concluded that these stations can be protected by providing alternate spectrum in the 3585-3600 kHz frequency segment.

Action by the Commission on December 15, 2006, by Report and Order and Order on Reconsideration. Chairman Martin and Commissioners Copps, Adelstein, Tate, and McDowell.

Topic: 12445  Message: 12457

Did you happen to see the height of the tower in Conroe? Supposed to be on top of a 750' tower located just outside loop 336 on the SW side of town. That would make it the highest site besides Houston near 1000 feet.
I saw a couple of the Conroe freqs that were close to existing Montgomery County EDACS trunked freqs which may cause some reception problems for us people with consumer grade equipment. Don't know if the "real" radios will have adjacent channel interference.

Wonder what is up with loading the shorter West Walker County site (21) with more channels than the one near Huntsville (site 20) that is twice as tall. Perhaps they are planning on covering area west on Hwy 30 towards Grimes Co (next on the Borg-Net radar?).
Any comments from up that way?

Myles

Yeah, because the code is real practical in 2006. I've been waiting for this
for 8 years myself. I've even passed the genreal written in the past, but
never got motivated to learn code that is of little use in this day and age.
I'm happy I can finally get full use out of my 706mk2g soon enough.

I see this as a good thing that will help expand ham radio to a new audience
that would rather use digital modes than CW.

Topic: 12439  Message: 12461

Barry,

Sorry, things change. Rules and regulations change all of the time. While there are a lot of older HAMS that still occasionally use code it has really outlived it's most useful time. Data / Packet Transmission are much more efficient and can easily transmit more information in a shorter period of time for emergency communications. Remember this was one of the excuses to keep code around for so long.

This may breath some new life into HAM radio and revive some interest with the youth of today.

Scott

Surely you jest.

The upcoming elimination of the code requirement is legit, however. See the ARRL web site for further details.

anyone know how true this is below?

Gettysburg, PA

The FCC announced today that Kellogg's Corporation and the Federal Communications Commission have signed a pact to issue Amateur Radio Licenses on specially marked boxes of Kelloggs Corn Flakes, Rice Krispies, Sugar Frosted Flakes, Sugar Pops, and Sugar Smacks.

In this unprecedented move the FCC believes this will not harm amateur radio but allow will all individuals to receive an amateur radio license without having to demonstrate any skills, with the exception of being able to use a pair of scissors to cut out their operating permit from the specially marked breakfast cereal boxes.

A Kellogg's spokesperson from Battlecreek commented that Kelloggs' executives were proud to have their firm selected by the government to be the issuer of licenses for amateur radio in the US and hope soon to make agreements with other American cereal loving countries who receive our imports. They also expect to issue certificates of achievement for DXCF for confirmed contacts with 100 corn flakers. Kelloggs Corn Flake are the oldest Kelloggs product, which most closely coincides with the advent of amateur radio in the early twentieth century.

The "snap, crackle, pop" of ambient noises (qrn) on the hf bands will take on new meaning with this exciting venture to promote amateur radio internationally, Kelloggs and FCC officials affirmed in a recent news conference.

December 15, 2006 Chelsea Fallon: (202) 418-7991

FCC MODIFIES AMATEUR RADIO SERVICE RULES, ELIMINATING MORSE CODE EXAM
REQUIREMENTS AND ADDRESSING ARRL PETITION FOR RECONSIDERATION

Washington, D.C. - Today, the Federal Communications Commission (FCC)
adopted a Report and Order and Order on Reconsideration (Order) that
modifies the rules for the Amateur Radio Service by revising the examination
requirements for obtaining a General Class or Amateur Extra Class amateur
radio operator license and revising the operating privileges for Technician
Class licensees. In addition, the Order resolves a petition filed by the
American Radio Relay League, Inc. (ARRL) for partial reconsideration of an
FCC Order on amateur service rules released on October 10, 2006.

The current amateur service operator license structure contains three
classes of amateur radio operator licenses: Technician Class, General
Class, and Amateur Extra Class. General Class and Amateur Extra Class
licensees are permitted to operate in Amateur bands below 30 MHz, while the
introductory Technician Class licensees are only permitted to operate in
bands above 30 MHz. Prior to today's action, the FCC, in accordance with
international radio regulations, required applicants for General Class and
Amateur Extra Class operator licenses to pass a five words-per-minute Morse
code examination.

Today's Order eliminates that requirement for General and Amateur Extra
licensees. This change reflects revisions to international radio
regulations made at the International Telecommunication Union's 2003 World
Radio Conference (WRC-03), which authorized each country to determine
whether to require that individuals demonstrate Morse code proficiency in
order to qualify for an amateur radio license with transmitting privileges
on frequencies below 30 MHz. This change eliminates an unnecessary
regulatory burden that may discourage current amateur radio operators from
advancing their skills and participating more fully in the benefits of
amateur radio.

Today's Order also revises the operating privileges for Technician Class licensees by eliminating a disparity in the operating privileges for the Technician Class and Technician Plus Class licensees. Technician Class licensees are authorized operating privileges on all amateur frequencies above 30 MHz. The Technician Plus Class license, which is an operator license class that existed prior the FCC's simplification of the amateur license structure in 1999 and was grandfathered after that time, authorized operating privileges on all amateur frequencies above 30 MHz, as well as frequency segments in four HF bands (below 30 MHz) after the successful completion of a Morse code examination. With today's elimination of the Morse code exam requirements, the FCC concluded that the disparity between the operating privileges of Technician Class licensees and Technician Plus Class licensees should not be retained. Therefore, the FCC, in today's action, afforded Technician and Technician Plus licensees identical operating privileges.

Finally, today's Order resolved a petition filed by the ARRL for partial reconsideration of an FCC Order released on October 10, 2006 (FCC 06-149). In this Order, the FCC authorized amateur stations to transmit voice communications on additional frequencies in certain amateur service bands, including the 75 meter (m) band, which is authorized only for certain wideband voice and image communications. The ARRL argued that the 75 m band should not have been expanded below 3635 kHz, in order to protect automatically controlled digital stations operating in the 3620-3635 kHz portion of the 80 m band. The FCC concluded that these stations can be protected by providing alternate spectrum in the 3585-3600 kHz frequency segment.

Action by the Commission on December 15, 2006, by Report and Order and Order on Reconsideration. Chairman Martin and Commissioners Copps, Adelstein, Tate, and McDowell.

Heard a couple of things from a little birdie a while back, but can't really speculate. Just keep an eye out on the new licenses. I do know that the Grimes Co. SO is going to apply for new VHF frequencies due to everyday interference from the Hays County Jail, whose output activates their repeater often. FCC says due to distance, there is no remedy except using new frequencies. Just about every county unit has XTL/XTS 5000's already.

Only 750 huh, that tower is taller than that..... I would look for the north Montgomery County Data site to be moving....

The Walker West site is to cover, NW Montgmoery (Nat. Forest), West Walker, and East Grimes Counties per the drawings I have seen.

# 12465. DPS going digital?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-21 00:46:49 UTC
From: John Perry
Topic: 12465  Message: 12465

I have to admit that I'm getting a little nervous here. I work at the Texas City RS as the "resident scanner expert". I go by the moniker "J.P" if I have met any one of you. Here's the deal.

I have programmed in all the state and local DPS frequencies the TC and the state into my demo scanners. I have a Pro-96 here at the house. I'm currently scanning the DPS frequencies for TC and the state. These banks are usually quite active. Tonight I hear NADA, nothing.... on the DPS freqs.

To add to this, one of the many towtruck drivers I deal with came in this morning telling me that they were instructed that DPS in our area will be switching to APCO-25 tonight. I have not been able to verify this statement.

The problem remains is that I'm not hearing any DPS traffic tonight. Is there something additional I need to do to get things working? I'm using Win96/radioreference to update the scanner. Is there some analogy to a "control channel" that needs to be added for APCO-25 to work? Is the towtruck owner mis-informed?

Please advise.

This post talks of the tower's in Huntsville and Conroe. Where can I find information on where the "site(s)" are located/referenced?

First of all you need to have a digital capable scanner. That being said, program suspected TC frequencies (155.685, 159.210 & 159.2175) with FM mode, I.e., no pl tone. That should do it!

Subject: [HoustonScan] DPS going digital?

I have to admit that I'm getting a little nervous here. I work at the Texas City RS as the "resident scanner expert". I go by the moniker "J.P" if I have met any one of you. Here's the deal.

I have programmed in all the state and local DPS frequencies the TC and the state into my demo scanners. I have a Pro-96 here at the house. I'm currently scanning the DPS frequencies for TC and the state. These banks are usually quite active. Tonight I hear NADA, nothing.... on the DPS freqs.

To add to this, one of the many towtruck drivers I deal with came in this morning telling me that they were instructed that DPS in our area will be switching to APCO-25 tonight. I have not been able to verify this statement.

The problem remains is that I'm not hearing any DPS traffic tonight. Is there something additional I need to do to get things working? I'm using Win96/radioreference to update the scanner. Is there some analogy to a "control channel" that needs to be added for APCO-25 to work? Is the towtruck owner mis-informed?

Please advise.

As long as you wish to monitor APCO-25 digital, the radio is ready to go. All other digital modes are vorbotten and the radio will not receive them. Sadly, it will not decrypt encrypted comms.

It will monitor Motorola digital trunked with no extra steps required. Enter the frequencies and talkgroups as the manual describes.

As for conventional frequencies, enter the frequencies in FM mode, not DC or CT modes, and it will capture the mechanical voices of the transmissions.

One caveat, if you are near the threshhold distance of the transmission, you will hear only the braps, not the robotesque voices. ;^>

Go with the Pro-96. Although the Pro-97 has some better features, LTR, with LCN search, for example, the Pro-97 is analog only. So, if you want digital, you will need either a Pro-96 or a BC396T.

Interesting comm on FBSO earlier today:

With the drum corps banging loudly in the background, a patrolman ,
barely audible, radioed the dispatcher, "I'll be out of service for
awhile, seeking shelter from the hailstorm."

# 12477. RE: [HoustonScan] DPS going digital?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-21 22:16:02 UTC
From: John Perry
Topic: 12465  Message: 12477

The problem solved itself! I've been sitting here trying to find out what was wrong in my scanner. At almost exactly 2:30 PM the scanner burst into activity! They must have delayed the launch or something. But now I'm getting all of the new APCO-25 DPS in this area. Interestingly enough the default setting on the banks that I have DPS freqs stored in is set to "FM". But when I receive a APCO-25 signal the FM changes to "DG". I called the tow-truck companies and told them their scanners should work now and they verified that they now all get the new APCO-25 tow-truck dispatch channel.

Texas City DPS is now using P25 on 159.2175 and the Angleton transmitter on
155.685 MHz.
Last night, I heard them in analog mode like normal.
Don't know about Conroe.

Sure glad I studied hard, took & passed the 20 wpm code before it was dropped for the Extra Clsss exam in 2000. That and $5 will buy me a cup of coffee (in most places).

If you don't know the code, you'll never know if you're missing anything. How about Spanish?

I just realized I forgot 16192 in the lineup. Are you sure they call it
"TAC 2" instead of just 2? It would make more sense if they called 16160
DISP 1 and 16192 DISP 2 but no one said it had to make sense.

taking into consideration that i have never heard the dispatcher talking on 16192 and only officers,i'm almost certain it's tac.then again they are building a new police station off of spencer hwy.i don't know if they are going close the other one or it will be an addition.if it will be 2 police stations then it just maybe used for disp2 in the future

# 12491. NWS xmas nostalgia

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-24 16:37:04 UTC
From: Myles Barkman
Topic: 12491  Message: 12491

Does anyone remember who used to play the guitar on NOAA Wx radio during the xmas season and what years those were?
I remember listening to it for a few years when I used to visit my Granny and Papa in Baytown every XMAS (late 80's/early 90's).
This was before the weather service offices were consolidated (1994) and before the computer generated voices.

Was driving near I-45 and Edgebrook when I heard some simplex HFD ops on
TAC-5 460.575. When I got home, I did not see any active incidents for the
units I heard on the active incidents page.
I think this was training out at the field south of Hobby airport.
Wonder if they usually use D-5 for training.

First of all you need to have a digital capable scanner. That being said, program suspected TC frequencies (155.685, 159.210 & 159.2175) with FM mode, I.e., no pl tone. That should do it!

Subject: [HoustonScan] DPS going digital?

I have to admit that I'm getting a little nervous here. I work at the Texas City RS as the "resident scanner expert". I go by the moniker "J.P" if I have met any one of you. Here's the deal.

I have programmed in all the state and local DPS frequencies the TC and the state into my demo scanners. I have a Pro-96 here at the house. I'm currently scanning the DPS frequencies for TC and the state. These banks are usually quite active. Tonight I hear NADA, nothing.... on the DPS freqs.

To add to this, one of the many towtruck drivers I deal with came in this morning telling me that they were instructed that DPS in our area will be switching to APCO-25 tonight. I have not been able to verify this statement.

The problem remains is that I'm not hearing any DPS traffic tonight. Is there something additional I need to do to get things working? I'm using Win96/radioreference to update the scanner. Is there some analogy to a "control channel" that needs to be added for APCO-25 to work? Is the towtruck owner mis-informed?

Please advise.

Confirmation of Power outage in Hobby Area.

I can confirm the power outage in the Hobby Area. It is unusual for Hobby Airport to be affected in anyway, but the Hotels tend to lose power on a fairly regular basis anytime there is poor weather in the area. They are on some very old transmission lines. The last major outage in the area was caused by a lighting strike to the main power bus for one of the larger hotels in the area. Power was off at that facility for several days while repairs took place. Local power was out for several hours.

Scott

# 12506. 453.600 in Pearland

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-31 02:15:49 UTC
From: Myles Barkman
Topic: 12506  Message: 12506

Heard a "blip" signal on 453.600 MHz that was sort of weak. Seems like it transmits every second with a high-pitched tone.
I see there is a newly licensed station for Pearland WQFN681 that was licensed in September for the "projects department".
The license says the use is for "gps/rtk activities".
Could this be something used by public safety for vehicle location or by public works for differential GPS?
I'm leaning towards public works since it appears to be only 453.600 and not an input and it is relatively low height and power.

# 12507. new licensed freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-31 06:59:03 UTC
From: Myles Barkman
Topic: 12507  Message: 12507

See some new DOT repeaters licensed in the area in October. They could be P25 capable. They are licensed for 600 units.
151.0325 Houston
151.040 La Porte
159.1875 Angleton
156.240 Conroe
158.730 Rosenberg
154.8825 Hempstead

Since DOT already has talkgroups on STAR-Net for all counties, I'm not sure what all these new repeaters are needed for.
Perhaps they are getting ready to abandon the old low-band stuff for their work crews and move to hi-band.

I see Pearland Vol Fire Dept.has licensed 453.925 back in March.
Does anyone have any info on this (Ethan)?

Is Richwood VFD actually using 453.4125? Seems too close to Houston's 453.400 and 453.425.

Anyone know what 131.775 from Pelican Island is being used for? Also 129.850 from Hitchcock?

Is Kingwood College using 460.250 repeater and 460.275 simplex?

If anyone is familiar with Houston Executive Airport north of Igloo Rd and US Hwy 90, maybe they can try listening to 451.850 and 461.300 for repeaters. It is a small public airport between Katy and Brookshire so I'm not sure how much activity they get that warrants use of repeaters, much less two of them. Used to be a private field called Air Rice.

Is Katy ISD using 461.050 repeater?

The City of Deer Park has licensed 453.1125 and 458.1125 for "COMMUNICATIONS ESSENTIAL TO OFFICIAL ACTIVITIES". These freqs are still being used by Port of Houston Security, even though their licensed lapsed some time ago.

The private prison near Bush airport, Corrections Corporation of America, has a repeater licensed on 464.950 MHz. I show it may have been on 464.925. Can anyone confirm their use of 464.950?

# 12508. revisiting 453.550

Yahoo group: HoustonScan (2005 — 2006)
Date: 2006-12-31 17:31:40 UTC
From: Myles Barkman
Topic: 12508  Message: 12508

Back in the 80's and 90's, many of the area PD's especially East and Southeast of Houston shared a simplex channel for interoperability referred to as "Tri-City". It was on 453.550 MHz.
Many of these agencies have moved up to STAR-Net and Jacinto City FD has used the frequency for several years as a repeater.
I wanted to see if folks could program this freq into their scanners to see if it is still used by the few remaining agencies for either BS or a tactical channel as the remaining agencies are spread out too far for it to be used otherwise.
The agencies most likely to still have this channel programmed are:
Hedwig Village
Spring Valley
Tomball
Houston
Nassau Bay

It's possible some of the older PDs that have moved to STAR-Net might even still have mobiles or HTs and still occasionally use old simplex channels for BS or tactical use as well.
So put it in and see what you hear. If you hear a repeater, it will be Jacinto City FD. If you hear simplex, see if you can figure out who it is and report back.

Oh yeah, forgot to list the most likely and original users of the channel
that could still possibly use it-Lakeview PD.
Lakeview PD is actually the DBA name for Taylor Lake Village and El Lago PD.
They may still dispatch for Shoreacres PD.

Don’t forget another user of this Freq…..

HPD

I can verify that it is still used by some, but not nearly as many as it was prior to 800 trunking becoming so prevalent in this area.

I've previously verified 453.55 [146.2] (simplex, base and mobile)
used by Spring Valley Police. 453.55 [146.2] is also listed on
RadioReference as used by Tomball Police.

On-site comms?

> If anyone is familiar with Houston Executive Airport north of
Igloo Rd and US Hwy 90, maybe they can try listening to 451.850 and
461.300 for repeaters. It is a small public airport between Katy
and Brookshire so I'm not sure how much activity they get that
warrants use of repeaters, much less two of them. Used to be a
private field called Air Rice.

It's located at 1900 Cardiff Road, Brookshire, Texas 77423. The
main entrance is about a mile north of Cardiff Road's intersection
with US-90, north of the Igloo Factory, between Katy and
Brookshire. The runway is complete, but the structures (hangers,
terminal, etc.) still need to be erected. So far, the airport
offices are in temporary buildings.

Unicom Frequency: 122.975, KHEA (Pending Approval)

Here is a little more detailed information in reference to the continued usage of what used to be known as TRI-CITY…..

453.550 PL 123.0 is programmed as channel B11 in HPD radios. It does still see use especially during high traffic periods. To my knowledge it is no longer monitored by HPD dispatch. It is however still on the dispatch consoles of several local agencies on the Southside of town. The volume is usually just turned down on the console.

I know of many officers in this area of town (those that still have UHF radios) that do use this as a secondary channel from time to time to communicate between other agencies or dispatch.

Most agencies that do have a PL programmed on the transmit side on this frequency monitor it with open squelch.

From: bpckty1
Topic: 12508  Message: 12515

The Memorial Villages area also called it "Tri-City."

I have heard the frequency used by HPD, but it has been a long time since I have been in the city long enough to monitor for it. But, it was used by specialized task force units, and randomly.

One good way to check for its use would be at events, such as the rodeo parade or the marathon. I've heard units using the simplex frequencies (Tacs 1 and 2, if I recall correctly) normally not heard, at the Buffalo Bayou Fireworks extravaganzas. Teams on the south side of the bayou were on one frequency, units on the north were on another, and various specialty units were on a couple of the others, one of which was 453.5500. And, of course, Citywide for overall command.

OK, looks like the consensus says I definitely need to program this back in.
I just remembered that some scanners let you program an "anti-PL" so I can program 453.550 with a lock-out of Jacinto City's DPL of 732 and not have to listen to them, just catch everyone else since some folks use Tri-City with PL 123.0 and some with 146.2 and some possibly with no tone.
For those with the 296D, program like you are going to set the DPL tone to 732 but instead of hitting the "ENTER" key when you scroll to 732, hit the "L/O" key. If you set the system to Tone SQ mode (Menu, 3, 8, 2), then you should only hear activity 'other' than Jacinto City.
I don't know how other scanners program the anti-PL feature per channel so someone else will have to help with that.
Another option would be to just program 453.550 with PL 123.0 and again with 146.2. I don't really know who may be using it w/o PL but perhaps if enough of start listening, we can find out.

I'm surprised B11 would have ever been monitored by HPD dispatch since it was simplex only.
I can't remember ever hearing HPD officers refer to using it. Do they call it B11 or Tri-City?
Would Fox ever be expected to pop up on it?
